Biometric Authentication David Y. Zhang, Anil K. Jain, 2004-07-16 The past decade has seen a rapid growth in the demand for biometric-based authentication solutions for a number of applications. With significant advances in biometric technology and an increase in the number of applications incorporating biometrics, it is essential that we bring together researchers from academia and industry as well as practitioners to share ideas, problems and solutions for the development and successful deployment of state-of-the-art biometric systems. The International Conference on Biometric Authentication (ICBA 2004) was the first major gathering in the Asia-Pacific region devoted to facilitating this interaction. We are pleased that this conference attracted a large number of high-quality research papers that will benefit the international biometrics research community. After a careful review of 157 submissions, 101 papers were accepted either as oral (35) or poster (66) presentations. In addition to these technical presentations, this conference also presented the results and summaries of three biometric competitions: Fingerprint Verification Competition (FVC 2004), Face Authentication Competition (FAC 2004), and Signature Verification Competition (SVC 2004). This conference provided a forum for the practitioners to discuss their practical experiences in applying the state-of-the-art biometric technologies which will further stimulate research in biometrics. We are grateful to Jim L. Wayman, Edwin Rood, Raymond Wong, Jonathon Philips, and Francis Ho for accepting our invitation to give keynote talks at ICBA 2004. In addition, we would like to express our gratitude to all the contributors, reviewers, program committee and organizing committee members who made this a very successful conference. We also wish to acknowledge the Croucher Foundation, the International Association of Pattern Recognition, IEEE Hong Kong Section, the Hong Kong Polytechnic University, the National Natural Science Foundation in China, and Springer-Verlag for sponsoring this conference.

**Handbook of eID Security** Walter Fumy, Manfred Paeschke, 2010-12-13 In the forthcoming years, citizens of many countries will be provided with electronic identity cards. eID solutions may not only be used for passports, but also for communication with government authorities or local administrations, as well as for secure personal identification and access control in e-business. Further eID applications will be implemented in the healthcare sector. For some of these solutions we will not need a physical data carrier at all. The Handbook of eID Security is the first source presenting a comprehensive overview of this strongly discussed topic. It provides profound information on the following questions: - Which are the latest concepts, technical approaches, applications and trends in the field of eID? - Which areas of application are covered by the different eID concepts? - Which security mechanisms are used, for what reasons, and how can their reliability be ensured? - How will the security of personal data be guaranteed? This book is a perfect source of information for all persons working in industry, banking, healthcare, research institutes, administrations and public authorities: - who are involved in the development of eID application concepts, technical solutions, and of devices used for transfer and read out data to and from eIDs, - who have or will have to do with eID applications in their daily work, and - who participate in informing and discussing about the security and transparency of eID solutions.
