GPS Tracking with Java EE Components Kristof Beiglböck,2018-08-06 GPS Tracking with Java EE Components: Challenges of Connected Cars highlights how the self-driving car is actually changing the automotive industry, from programing embedded software to hosting services and data crunching, in real time, with really big data. The book analyzes how the challenges of the Self Driving Car (SDC) exceed the limits of a classical GPS Tracking System (GTS.) It provides a guidebook on setting up a tracking system by customizing its components. It also provides an overview of the prototyping and modeling process, and how the reader can modify this process for his or her own software. Every component is introduced in detail and includes a number of design decisions for development. The book introduces Java EE (JEE) Modules, and shows how they can be combined to a customizable GTS, and used as seed components to enrich existing systems with live tracking. The book also explores how to merge tracking and mapping to guide SDCs, and focuses on client server programming to provide useful information. It also discusses the challenges involved with the live coordination of moving cars. This book is designed to aid GTS developers and engineers in the automotive industry. It can also help Java Developers, not only interested in GPS Tracking, but in modern software design from many individual modules. Source code and sample applications will be available on the book's website.

Real-time Vehicle Tracking System Using GPS & GSM Ejaz Qayyum,Zeeshan Mohsin,Junaid Malik,2013-01 Real-time Vehicle Tracking System (VTS) is a system that uses Global Positioning System (GPS) to track and plot the location of its vehicle on the map. VTS combine GPS technology, cellular communications, street-level mapping, and an intuitive user interface, with the ostensible goal of improving Vehicle tracking and customer service. For example, a customer using VTS system is able to pinpoint the longitude, latitude, ground speed of a given vehicle. The vehicle's location can be quickly found and it could be rerouted to provide timely delivery to a nearby customer. VTS systems also enable customers to track their vehicle on mobile phone. VTS systems include a network of vehicles that are equipped with a GPS receiver, a GSM modem, and a laptop. This network connects with a base station consisting of a PC computer station as well as a GSM modem and interface. Where any vehicle can be viewed on the map by a moving dot Real-Time VTS systems can be used to increase customer's dispatching procedure and measure field personnel's live performance.

Spatial Database for GPS Wildlife Tracking Data Ferdinando Urbano,Francesca Cagnacci,2014-03-12 This book guides animal ecologists, biologists and wildlife and data managers through a step-by-step procedure to build their own advanced software platforms to manage and process wildlife tracking data. This unique, problem-solving-oriented guide focuses on how to extract the most from GPS animal tracking data, while preventing error propagation and optimizing analysis performance. Based on the open source PostgreSQL/PostGIS spatial database, the software platform will allow researchers and managers to integrate and harmonize GPS tracking data together with animal characteristics, environmental data sets, including remote sensing image time series, and other bio-logged data, such as acceleration data. Moreover, the book shows how the powerful R statistical environment can be integrated into the software platform, either connecting the database with R, or embedding the same tools in the database through the PostgreSQL extension Pl/R. The client/server architecture allows users to remotely connect a number of software applications that can be used as a database front end, including GIS software and WebGIS. Each chapter offers a real-world data management and processing problem that is discussed in its biological context; solutions are proposed and exemplified through ad hoc SQL code, progressively exploring the potential of spatial database functions applied to the respective wildlife tracking case. Finally, wildlife tracking management issues are discussed in the increasingly widespread framework of collaborative science and data sharing. GPS animal telemetry data from a real study, freely available online, are used to demonstrate the proposed examples. This book is also suitable for undergraduate and graduate students, if accompanied by the basics of databases.

Advances in Neural Network Research and Applications Zhigang Zeng,Jun Wang,2010-05-10 This book is a part of the Proceedings of the

Seventh International Symposium on Neural Networks (ISNN 2010), held on June 6-9, 2010 in Shanghai, China. Over the past few years, ISNN has matured into a well-established premier international symposium on neural networks and related fields, with a successful sequence of ISNN series in Dalian (2004), Chongqing (2005), Chengdu (2006), Nanjing (2007), Beijing (2008), and Wuhan (2009). Following the tradition of ISNN series, ISNN 2010 provided a high-level international forum for scientists, engineers, and educators to present the state-of-the-art research in neural networks and related fields, and also discuss the major opportunities and challenges of future neural network research. Over the past decades, the neural network community has witnessed significant breakthroughs and developments from all aspects of neural network research, including theoretical foundations, architectures, and network organizations, modeling and simulation, empirical studies, as well as a wide range of applications across different domains. The recent developments of science and technology, including neuroscience, computer science, cognitive science, nano-technologies and engineering design, among others, has provided significant new understandings and technological solutions to move the neural network research toward the development of complex, large scale, and networked brain-like intelligent systems. This long-term goals can only be achieved with the continuous efforts from the community to seriously investigate various issues on neural networks and related topics.

For each of the 12 areas addressed, the book provides a vision for their application, identifies key issues yet to be addressed and the future opportunities that the timely application and advancement of ITS can bring.

Handbook of Technology Application in Tourism in Asia Azizul Hassan,2022-07-09 It is an undisputed reality that the tourism industry in Asia is getting exposed to more innovative technologies than ever before. This proposed book provides the latest research in the application of innovative technology to the tourism industry, covering the perspectives, innovativeness, theories, issues, complexities, opportunities and challenges. This book, a blend of comprehensive and extensive effort by the contributors and editors, is designed to cover the application and practice of technology in tourism, including the relevant niches. This book focuses on the importance of technology in tourism. This also highlights, in a comprehensive manner, specific technologies that are impacting the tourism industry in Asia, as well as the constraints the industry is facing. The contents of this book deal with distinct topics, such as mobile computing, new product designs, innovative technology usages in tourism promotion, technology-driven sustainable tourism development, location-based apps, mobility, accessibility and so on. A good number of research studies have conducted outlining the contributions and importance of technologies in tourism, in general. However, the tourism industry of Asia so far has attracted very few researchers. Some contributions have been made but not sufficient. Considering the ongoing trend of technology application in the tourism industry in Asia, very few research attempts have been made aiming to explore diverse aspects. Tourism is expanding enormously across the world. which actually creates more demands for effective technologies. This book will be a reading companion, especially for tourism students in higher academic institutions. This book will also be read by the relevant policy planners and industry professionals. Apart from them, this book will be appreciated by expatriate

researchers and researchers having keen interest in the Asian tourism industry.

Track and Trace God Nadia Segar,2021-01-11 ~Don't forget the Track and Trace Journal, also available on Amazon!Have you ever felt that your prayers were like shipping packages that are lost in the mail? You pray, wondering if your petitions reach their destination. Each day you wake with a hint of excitement- confident that today will be the day you receive an answer. But your patience grows thin as the day ends with another unanswered prayer. You begin to ask yourself, Am I praying correctly? and even wonder if God really exists. TRACK AND TRACE GOD chronicles my reflective journey to understand and deepen my unestablished relationship with God. Asking myself five questions- Who, What, When, Where, Why, and How- helped me establish a transparent, more profound connection with God. I discovered what happened to those prayer packages; they were never lost. Perhaps you too will find yours are not lost at all.This book outlines the effective prayer tracking tool I use for my prayers- those packages sent to God. As you begin to embrace journaling, it will become the database for storing your visions, hopes, dreams, direction, and, most importantly, confirmations of answered prayers. Journaling will allow you to track all of your shipments to God and pull the delivery status information as He responds to every one of your prayers. Be prepared to draw closer to God in faith by believing that He will perform every promise and by knowing that your prayer of expectation will move you closer into His presence.
