The Future of Translation Technology Chan Sin-wai, 2016-10-26 Technology has revolutionized the field of translation, bringing drastic changes to the way translation is studied and done. To an average user, technology is simply about clicking buttons and storing data. What we need to do is to look beyond a system's interface to see what is at work and what should be done to make it work more efficiently. This book is both macroscopic and microscopic in approach: macroscopic as it adopts a holistic orientation when outlining the development of translation technology in the last forty years, organizing concepts in a coherent and logical way with a theoretical framework, and predicting what is to come in the years ahead; microscopic as it examines in detail the five stages of technology-oriented translation procedure and the strengths and weaknesses of the free and paid systems available to users. The Future of Translation Technology studies, among other issues: The Development of Translation Technology Major Concepts in Computer-aided Translation Functions in Computer-aided Translation Systems A Theoretical Framework for Computer-Aided Translation Studies The Future of Translation Technology This book is an essential read for scholars and researchers of translational studies and computational linguistics, and a guide to system users and professionals.

Translation of Thought to Written Text While Composing Michel Fayol, Denis Alamargot, Virginia Wise Berninger, 2012 Translation of cognitive representations into written language is one of the most important processes in writing. This volume provides a long-awaited updated overview of the field. The contributors discuss each of the commonly used research methods for studying translation; theorize about the nature of the cognitive and language representations and cognitive/linguistic transformation mechanisms involved in translation during writing; and make the case that translation is a higher-order executive function that is fundamental to the writing process. The book also reviews the application of research to practice -- that is, the translation of the research findings in education and the work-world for individuals who interact with others using written language to communicate ideas. This volume provides a rich resource for student, theorists, and empirical researchers in cognitive psychology, linguistics, and education; and teachers and clinicians who can use the research in their work.

Introduction to Google Translate Gilad James, PhD, Google Translate is a multilingual translation service provided by Google. It allows users to translate words, phrases, and entire documents between multiple languages. The service was launched in April 2006 and has since been constantly updated to provide more accurate translations. Initially offering translations in only two languages, Google Translate now supports over 100 languages. The translation process works by analyzing the text or document input by the user, breaking it up into smaller segments, and then using statistical algorithms to match these segments with translations from its database. Google Translate has been a helpful tool for people to communicate across different languages, whether it be for business or personal use. However, it must be noted that automated translations often carry a high risk of inaccuracies due to the complexities inherent in language and the nuances of different cultures and contexts. It is always recommended to use translations as a starting point, and then have a native speaker review and refine the language to ensure accuracy.

Computer-assisted simultaneous interpreting Bianca Prandi, 2023-01-19 The present work explores computer-assisted simultaneous interpreting (CASI) from a primarily cognitive perspective. Despite concerns over the potentially negative impact of computer-assisted interpreting (CAI) tools on interpreters' cognitive load (CL), this hypothesis has thus far remained untested. Furthermore, previous research has been restricted to the evaluation of the CASI product. Hence, a methodology for the process-oriented

evaluation of CASI and the empirical evidence for its cognitive modelling were missing. Overcoming these limitations appears essential to advance CAI research, particularly to foster a deeper understanding of the cognitive aspects of CAI through a validated research methodology and to determine the feasibility of the integration of CAI tools into the interpreting process. Therefore, this dissertation tested and empirically validated a methodology for the combined exploration of the product and process of CASI. Quantitative and qualitative data were collected during an eyetracking experiment at the Translation & Cognition Center of the University of Mainz. The study followed a convergent mixed-method and multi-method approach and involved nine MA advanced interpreting students. Prior to the experimental task, the informants were trained in the use of the three terminology support tools compared during the experiment, i. e. a digital glossary in PDF format, a CAI tool with manual look-up and a mock-up CAI tool with integrated automatic speech recognition (ASR) for terminology. After several pre-tests, the participants interpreted three speeches from English into their native German using a different tool each time. To increase comparability between the three conditions and control for potentially confounding variables, the speeches prepared ad-hoc for data collection were validated during a pilot study. The students' gaze data and deliveries were recorded and analysed. Qualitative data on the informants' perception of the tools were collected post-hoc. In the study, several performance, behavioural, and subjective measures were analysed: terminological accuracy and errors and omissions; glossary queries, ear-voice span, inter-cluster pause duration, time to first fixation, average fixation duration, and fixation time; qualitative questionnaire responses. The findings of this research provide first insights into the CASI process, in particular as it pertains to the effects of CAI tools on CL and attention allocation in interpreter-CAI tool interaction during simultaneous interpreting. As this is the first study on in-process CAI tool use with a markedly cognitive orientation, it entails significant implications for the methodological development of CAI research and the design of future studies on cognitive aspects of CASI, while raising additional questions in need of further investigation.

Translation as Systemic Interaction Heidemarie Salevsky, Ina M Ller, 2011-01-01 Studying the nature of translation theory and offering the reasons for success or failure of translation – this book is for anyone with an academic or professional interest in translation. It presents a new approach – combining a complex model of reality and a biocybernetic computeraided methodology for the study of translation processes. The study is discussing translation as systemic interaction and connecting for the first time Translation Studies with biocybernetics, fuzzy logic, information theory, intercultural communication, action theory, psychology and various technical disciplines (including Russian, German and English examples). It is a breakthrough in the understanding of irregularities in translation processes in theory and practice as well as in the training of translators and interpreters. Dr. Heidemarie Salevsky is professor of Translation Studies at Okan University, Istanbul, and worked as an interpreter, translator and lector. She was Head of the Translation Studies Department at Humboldt University in Berlin and professor of Translation Studies and Technical Communication in Magdeburg. She was a visiting professor at the Universities of New York/Binghamton, Heidelberg, Innsbruck and Vienna. Dr. Ina M ller works as a research assistant at the Academy of Sciences and Literature in Mainz. She worked as a graduate technical translator and lecturer.

Machine Translation: From Real Users to Research Robert E. Frederking, Kathryn B. Taylor, 2004-09-08 The previous conference in this series (AMTA 2002) took up the theme "From Research to Real Users", and sought to explore why recent research on data-driven machine translation didn't seem to be moving to the marketplace. As it turned out, the first commercial products of the data-driven research movement were just over the

horizon, and in the intervening two years they have begun to appear in the marketplace. At the same time, rule-based machine translation systems are introducing data-driven techniques into the mix in their products. Machine translation as a software application has a 50-year history. There are an increasing number of exciting deployments of MT, many of which will be exhibited and discussed at the conference. But the scale of commercial use has never approached the estimates of the latent demand. In light of this, we reversed the question from AMTA 2002, to look at the next step in the path to commercial success for MT. We took user needs as our theme, and explored how or whether market requirements are feeding into research programs. The transition of research discoveries to practical use involves technical questions that are not as sexy as those that have driven the research community and research funding. Important product issues such as system customizability, computing resource requirements, and usability and fitness for particular tasks need to engage the creative energies of all parts of our community, especially research, as we move machine translation from a niche application to a more pervasive language conversion process. These topics were addressed at the conference through the papers contained in these proceedings, and even more specifically through several invited presentations and panels.

It investigates various techniques related to mining multimedia documents based on text, image, and video features. It provides an insight into the open research problems benefitting advanced undergraduates, graduate students, researchers, scientists and practitioners in the fields of medicine, biology, production, education, government, national security and economics.

Overview of Translation Tools - Benefits of Translation Memory Management Software for an International Company Marina Carrillo, 2007-07-07 Diploma Thesis from the year 2007 in the subject Computer Science - Software, grade: 2,3, University of Applied Sciences Ansbach, 60 entries in the bibliography, language: English, abstract: "TRANSLATION is very much like copying paintings." These are the words of Boris Pasternak (1890-1960), a Russian Poet, Novelist and Translator. The key to translation is not only understanding and being fluent in more than one language and having an understanding of language and culture, but also being able to convey the meaning of the text in one language into the other. However, just the knowledge of different languages is not enough to succeed in the competing world scene of translation. Through the immense development of the Internet, information technology, and ongoing globalization, "translation complexity takes a quantum leap" and forces today's translators to use computer

technology, advanced software applications, and computer-aided translation tools to meet enhanced translation requirements in a timely manner. In order to be successful translator in today's fast turn around times, the knowledge of and skills in different translation facilitating programs are essential. Translation is a difficult process, which requires computer and software skills in addition to proficiency. The translation business is quickly becoming one of the fastest growing markets in the world, and as a result, translators must develop efficiencies in their processes to meet the increasing demand and to be able to offer competitively priced services. The purpose of this thesis is to analyze the major translation tools available in the marketplace and to illustrate how they benefit the translator in multiple ways. This thesis will combine the essential knowledge of these different software tools and provide the important criteria required to choose the appropriate foreign language translation software.

Verbmobil: Foundations of Speech-to-Speech Translation Wolfgang Wahlster, 2000-07-31 Verbmobil is the result of eight years of intensive research in a large speech-to-speech translation project, executed by a consortium comprising nineteen academic and four industrial partners. The system that was developed by more than 100 researchers and engineers handles dialogs in three business-oriented domains, with translation between three languages: German, English, and Japanese. Verbmobil deals with spontaneous speech, which includes realistic repair phenomena, and uses deep semantic analysis to recognize a speaker's slips and to translate what he tried to say rather than what he actually said. - This book gives the first comprehensive overview of the results of this unique and seminal project in human language technology. Contributions by leading scientists in speech and language technology look at the component technologies that make Verbmobil the most advanced speech-to-speech translation system worldwide and a landmark project in the history of natural language processing.

Increasing the Therapeutic Ratio of Radiotherapy Philip J. Tofilon, Kevin Camphausen, 2016-11-21 Current cancer therapies are focused on three general strategies: modifying intrinsic radiosensitivity via molecular targeting, manipulating microenvironmental factors to enhance tumor susceptibility to radiation, and improving delivery of radiation to critical tumor locations while sparing normal tissues. The goal of this volume is to describe a number of promising approaches corresponding to each strategy. In general, research in radiation oncology tends to be siloed into fundamental biology, physics or treatment delivery. The strategies for improving therapeutic ratio encompassed in this book will involve each of these components of radiation oncology. Thus, they will illustrate the variety of disparate approaches available for potentially improving the efficacy of radiotherapy, which may then stimulate discussion across disciplines and foster further translational investigations. Although a goal of each chapter will be to highlight advances within an approach, of equal importance will be the delineation of barriers to successful clinical application and how to overcome or minimize such impediments. Along these lines, because therapeutic ratio incorporates both tumor and normal tissue radio response, a point of emphasis will be the mechanistic rationale for selectively modifying tumor (sensitization) or normal cells (protection). Finally, whereas the literature is replete with studies describing potential targets/strategies for increasing the therapeutic ratio for radiotherapy, this book will focus on those supported by in vivo data consistent with impending translational application along with those that are already being evaluated in the clinic.

Handbook on Session Initiation Protocol Radhika Ranjan Roy, 2018-09-03
 Session Initiation Protocol (SIP), standardized by the Internet Engineering Task Force (IETF), has emulated the simplicity of the protocol architecture of hypertext transfer protocol (HTTP) and is being popularized for VoIP over the Internet because of the ease with which it can be meshed with web services. However, it is difficult to know exactly how many requests for comments (RFCs) have been published over the last two decades in regards to SIP or how those RFCs are interrelated. Handbook on Session Initiation Protocol: Networked Multimedia Communications for IP Telephony solves that problem. It is the first book to put together all SIP-related RFCs, with their mandatory and optional texts, in a chronological and systematic way so that it can be used as a single super-SIP RFC with an almost one-to-one integrity from beginning to end, allowing you to see the big picture of SIP for the basic SIP functionalities. It is a book that network designers, software developers, product manufacturers, implementers, interoperability testers, professionals, professors, and researchers will find to be very useful. The text of each RFC from the IETF has been reviewed by all members of a given working group made up of world-renowned experts, and a rough consensus made on which parts of the drafts need to be mandatory and optional, including whether an RFC needs to be Standards Track, Informational, or Experimental. Texts, ABNF syntaxes, figures, tables, and references are included in their original form. All RFCs, along with their authors, are provided as references. The book is organized into twenty chapters based on the major functionalities, features, and capabilities of SIP.
