Identitti Mithu Sanyal,2022-07-26 Provocative and knotty . . . Identitti is a bracing story, one in which Sanyal refuses to give us the easy way out. —Olivia Craighead, The New York Times Nivedita (a.k.a. Identitti), a well-known blogger and doctoral student is in awe of her supervisor—superstar postcolonial and race studies South-Asian professor Saraswati. But her life and sense of self are turned upside down when it emerges that Saraswati is actually white. Nivedita's praise of her professor during a radio interview just hours before the news breaks—and before she learns the truth—calls into question her own reputation as a young activist. Following the uproar, Nivedita is forced to reflect on the key moments in her life, when she doubted her identity and her place in the world. As debates on the scandal rage on social media, blogs, and among her closest friends, Nivedita's assumptions are called into question as she reconsiders the lessons she learned from her adored professor. In her thought-provoking, genre-bending debut, Mithu Sanyal solicited the contributions and commentary of public intellectuals as if Saraswati were a real person. A darkly comedic tour de force, Identitti showcases the outsized power of social media in the current debates about identity politics and the power of claiming your own voice.

<u>Selfie Democracy</u> Elizabeth Losh,2022-09-06 How politicians' digital strategies appeal to the same fantasies of digital connection, access, and participation peddled by Silicon Valley. Smartphones and other digital devices seem to give us a direct line to politicians. But is interacting with presidential tweets really a manifestation of digital democracy? In Selfie Democracy, Elizabeth Losh examines the unintended consequences of politicians' digital strategies, from the Obama campaign's pioneering construction of an online community to Trump's Twitter dominance. She finds that politicians who use digital media appeal to the same fantasies of digital connection, access, and participation peddled by Silicon Valley. Meanwhile, smartphones and social media don't enable participatory democracy so much as they incentivize citizens to perform attention-getting acts of political expression. Losh explores presidential rhetoric casting digital media as tools of democracy, describes the conflation of gender and technology that contributed to Hillary Clinton's defeat in 2016, chronicles the Biden campaign's

early digital stumbles in 2020, and recounts the TikTok campaign that may have spoiled a Trump rally. She shows that although Obama and Trump may seem diametrically opposed in both style and substance, they both used mobile digital media in ways that reshaped the presidency and promised a new kind of digital democracy. Obama used data and digital media to connect to citizens without intermediaries; Trump followed this strategy to its most extreme conclusion. What were the January 6 insurrectionists doing, as they livestreamed themselves and their cohorts attacking the Capitol, but practicing their own brand of selfie democracy?

Frontiers of Multimedia Research Shih-Fu Chang,2018-01-03 The field of multimedia is unique in offering a rich and dynamic forum for researchers from "traditional" fields to collaborate and develop new solutions and knowledge that transcend the boundaries of individual disciplines. Despite the prolific research activities and outcomes, however, few efforts have been made to develop books that serve as an introduction to the rich spectrum of topics covered by this broad field. A few books are available that either focus on specific subfields or basic background in multimedia. Tutorial-style materials covering the active topics being pursued by the leading researchers at frontiers of the field are currently lacking. In 2015, ACM SIGMM, the special interest group on multimedia, launched a new initiative to address this void by selecting and inviting 12 rising-star speakers from different subfields of multimedia research to deliver plenary tutorial-style talks at the ACM Multimedia conference for 2015. Each speaker discussed the challenges and state-of-the-art developments of their prospective research areas in a general manner to the broad community. The covered topics were comprehensive, including multimedia content understanding, multimodal human-human and human-computer interaction, multimedia social media, and multimedia system architecture and deployment. Following the very positive responses to these talks, the speakers were invited to expand the content covered in their talks into chapters that can be used as reference material for researchers, students, and practitioners. Each chapter discusses the problems, technical challenges, state-of-the-art approaches and performances, open issues, and promising direction for future work. Collectively, the chapters provide an excellent sampling of major topics addressed by the community as a whole. This book, capturing some of the outcomes of such efforts, is well positioned to fill the aforementioned needs in providing tutorial-style reference materials for frontier topics in multimedia. At the same time, the speed and sophistication required of data processing have grown. In addition to simple queries, complex algorithms like machine learning and graph analysis are becoming common. And in addition to batch processing, streaming analysis of real-time data is required to let organizations take timely action. Future computing platforms will need to not only scale out traditional workloads, but support these new applications too. This book, a revised version of the 2014 ACM Dissertation Award winning dissertation, proposes an architecture for cluster computing systems that can tackle emerging data processing workloads at scale. Whereas early cluster computing systems, like MapReduce, handled batch processing, our architecture also enables streaming and interactive queries, while keeping MapReduce's scalability and fault tolerance. And whereas most deployed systems only support simple one-pass computations (e.g., SQL queries), ours also extends to the multi-pass algorithms required for complex analytics like machine learning. Finally, unlike the specialized systems proposed for some of these workloads, our architecture allows these computations to be combined, enabling rich new applications that intermix, for example, streaming and batch processing. We achieve these results through a simple extension to MapReduce that adds primitives for data sharing, called Resilient Distributed Datasets (RDDs). We show that this is enough to capture a wide range of workloads. We implement RDDs in the open source Spark system, which we evaluate using synthetic and real workloads. Spark matches or exceeds the performance of specialized systems in many domains, while offering stronger fault tolerance properties and allowing these workloads to be combined. Finally, we examine the generality of RDDs from both a theoretical modeling perspective and a systems perspective. This version of the dissertation makes corrections throughout the

text and adds a new section on the evolution of Apache Spark in industry since 2014. In addition, editing, formatting, and links for the references have been added.
