The Timber Industries of New Hampshire and Vermont Robert L. Nevel,1986 This periodic evaluation of statewide industrial timber output is based on canvasses of the primary wood manufacturing plants in New Hampshire and Vermont. The report contains statistics on industrial timber products and plant wood receipts in 1982, and the production and disposition of the manufacturing plant residues that resulted. The 129.4 million cubic feet (3.7 million m3) of industrial wood produced in New Hampshire and Vermont in 1982 represented a 50 percent increase in production since 1972, when similar information was last collected in detail. Production and receipts of all major industrial roundwood products increased during the period. Other trends in industrial product output and the use of manufacturing residues are presented, along with 25 statistical tables.
