Robert LeMoyne, Timothy Mastroianni

Clinical Methods Henry Kenneth Walker, Wilbur Dallas Hall, John Willis Hurst, 1990 A guide to the techniques and analysis of clinical data. Each of the seventeen sections begins with a drawing and biographical sketch of a seminal contributor to the discipline. After an introduction and historical survey of clinical methods, the next fifteen sections are organized by body system. Each contains clinical data items from the history, physical examination, and laboratory investigations that are generally included in a comprehensive patient evaluation. Latency of Pupillary Reflex to Light Stimulation and Its Relationship to Aging Richard Feinberg, Edward Podolak, 1965 A method is described for measuring pupillary contraction latency period regardless of initial absolute pupil diameter. Pupillary contraction latency period increases with age: the data presented show that the normal pupil, as usually found in healthy young people, has a shorter latency than is found in older normal subjects. (Author).

Wearable and Wireless Systems for Healthcare I Robert LeMoyne, Timothy Mastroianni, 2017-10-20 This book provides visionary perspective and interpretation regarding the role of wearable and wireless systems for the domain of gait and reflex response quantification. These observations are brought together in their application to smartphones and other portable media devices to quantify gait and reflex response in the context of machine learning for diagnostic classification and integration with the Internet of things and cloud computing. The perspective of this book is from the first-in-the-world application of these devices, as in smartphones, for quantifying gait and reflex response, to the current state of the art. Dr. LeMoyne has published multiple groundbreaking applications using smartphones and portable media devices to quantify gait and reflex response.

A Video Atlas of Neuromuscular Disorders Aziz Shaibani, 2014-09-25 The first real cases video atlas of neuromuscular disorders that is supplemented with multiple-choice questions, and updates on the illustrated topics. It is easy to search and read. It is perfect for preparation to the neurology and neuromuscular boards and an excellent way to update the experts. By replacing the descriptive text with vivid illustrative videos, the reader will have more time to face the intellectual challenges of these cases instead of trying to build a mental picture of these cases first. Short and well-edited video clips from real clinic stories supplemented with challenging multiple choice questions, provides an excellent way to bridge the gap between overflow of information and short attention span. The chapters are arranged according the symptoms instead of diseases, yet, diseases are listed in the

index if one wants to see all videos relevant to a specific disease. Close to 300 video cases* taken directly from a real neuromuscular clinic, illustrating a myriad of disorders and shedding light on their diagnosis, and treatment and giving updates about many of them provides an invaluable approach that should benefit any one who is interested in neuromuscular disorders which comprises more than 50% of presenting disease to general neurologists and even to general practitioners. Some rare diseases are also described, giving an opportunity for the new trainees to see them so that they can diagnosed them if they see them again which may not happen very often. *Due to size limitations, the videos are not included with any eBook version.

Clinical Neurophysiology Jasper R. Daube, Devon I. Rubin, 2009-05-22 Clinical Neurophysiology, Third Edition will continue the tradition of the previous two volumes by providing a didactic, yet accessible, presentation of electrophysiology in three sections that is of use to both the clinician and the researcher. The first section describes the analysis of electrophysiological waveforms. Section two describes the various methods and techniques of electrophysiological testing. The third section, although short in appearance, has recommendations of symptom complexes and disease entities using electroencephalography, evoked potentials, and nerve conduction studies.

Oxford Textbook of Clinical Neurophysiology Kerry R. Mills, 2017 Part of the Oxford Textbooks in Clinical Neurology series, the Oxford Textbook of Clinical Neurophysiology includes sections that provide a summary of the basic science underlying neurophysiological techniques, a description of the techniques themselves, including normal values, and a description of the use of the techniques in clinical situations. Much of diagnostic neurophysiology is essentially pattern recognition which is illustrated throughout the text using audio and video examples. Divided into four key sections, this book begins with the scientific basis of clinical neurophysiology (Section 1) before exploring specific techniques including Electromyography, Intracranial EEG recordings, and Magnetoencephalography (Section 2). The final two sections explore clinical aspects of both the peripheral nervous system (Section 3) and the central nervous system (Section 4).

Electrodermal Activity in Psychological Research William Prokasy, 2012-12-02 Electrodermal Activity in Psychological Research summarizes the methodological problems involved in the application of electrodermal activity as a dependent variable to basic psychophysiological research. The approach of this nine-chapter book is generally from the molecular to the molar in sequence of chapters, from basic to applied research, and from the more elementary to the more complex independent variable manipulation. This book covers first the terminology, recording and measuring techniques, electronic circuits, and current theories of the physiological mechanisms of electrodermal responding. The following chapters deal with the theories of attention and arousal; the indices of electrodermal activity and their relationships to these theories; the problems of measurement and control; and the effects of various independent variable manipulation on simple and differential conditioning performance. The discussions then shift to instrumental conditioning of electrodermal activity and the use of electrodermal measures in research on personality and pathological states, such as with schizophrenics, retardates, depressives, psychotherapy, central nervous system damage, anxiety, and introversion-extroversion. This text further considers the presumed mechanisms underlying systematic desensitization and the relationship of these mechanisms to electrodermal activity. A chapter explores the several widely divergent areas of social psychological research where electrodermal activity has been applied as a dependent variable, including in attitude, empathy, small groups, and social interactions. The concluding chapter evaluates the scientific basis for the

application of electrodermal measures to deception detection field.

The Acoustic Reflex Shlomo Silman, 2012-12-02 The Acoustic Reflex discusses the acoustic reflex - its magnitude in differential diagnosis, threshold, latency, and other related topics. The book covers different topics such as the neurophysiological basis of the acoustic middle-ear reflex and its characteristics; impedance concepts relating to it; and theories of middle-ear muscle function. The text also encompasses the evaluation of the response time of acoustic-immittance instruments; the contralateral acoustic-reflex threshold and its application for prediction of hearing loss; the magnitude and growth of the acoustic; the ipsilateral acoustic reflex; and the acoustic reflex latency. The monograph is recommended for clinicians and researchers in audiology, deaf education, hearing science, neurology, otolaryngology, physiology, and psychology. The book will also serve as a reference text in a course on impedance.

Indicators of Primitive and Postural Reflexes Assessment (IPPR) Patti Andrich, 2024-10 The Indicators of Primitive and Postural Reflexes Assessment (IPPR) provides a repeatable testing and scoring system that quantifies qualitative data. When indicators of primitive reflex activity are present, it can be said that the central nervous system is functioning in an immature or disrupted state because of inefficient neurological communication between sensory and motor neurological connections. As the individuals you are working with progress through targeted interventions, you can repeat testing procedures to document changes in the soft signs of neurological functions.

The Theory of Active Reflexes József Knoll, 1969

Conditioned Reflexes Ivan Petrovich Pavlov, 1927

Overlap as a Predictor of Form Discrimination Under Suprathreshold Conditions, 1961 The purpose of this study is to investigate the relation between physical overlap and the discrimination of forms under suprathreshold conditions of viewing. The experiments reported include: determinations of reaction time required for correct discrimination of nonsense forms, similar determinations for the correct discrimination of ellipses, and an investigation of the influence of area on the discrimination of nonsense forms. An additional experimental procedure is introduced to ascertain whether overlap is a predictor of judged similarity. Computations are reported which relate the overlap hypothesis to search-recognition data for rectilinear form classes. Physical measures of overlap are positive in relation to performance measures in all cases. However, it is clear from the results of these experiments that form discrimination also involves factors other than overlap. (Author).
