Nurse Practitioners and the Performance of Professional Competency Staci Defibaugh,2017-11-23 This book examines the interactional practices of nurse practitioners (NPs) and the delivery of health care in the US. The author takes a discourse analytic approach, examining the linguistic resources that NPs employ in their interactions with patients. These linguistic features are connected to the concept of professional competency with specific focus on the enactment of the patient-centered approach. Analytic focus is placed on how NPs address organizational responsibilities during medical visits with patients, the form and function of patient education, the use of indirect speech, and the role that small talk plays in health care encounters. The book explores the understudied professional field of nurse practitioners and examines their linguistic practices with an eye on crossing disciplinary boundaries, integrating research from linguistics, discourse analysis and health communication. It will appeal to those interested in medical discourse analysis and health communication, as well as applied linguistics scholars.

Managing Diabetes and Hyperglycemia in the Hospital Setting Boris Draznin,2016-05-20 As the number of patients with diabetes increases annually, it is not surprising that the number of patients with diabetes who are admitted to the hospital also increases. Once in the hospital, patients with diabetes or hyperglycemia may be admitted to the Intensive Care Unit, require urgent or elective surgery, enteral or parenteral nutrition, intravenous insulin infusion, or therapies that significantly impact glycemic control (e.g., steroids). Because many clinical outcomes are influenced by the degree of glycemic control, knowledge of the best practices in inpatient diabetes management is extremely important. The field of inpatient management of diabetes and hyperglycemia has grown substantially in the last several years. This body of knowledge is summarized in this book, so it can reach the audience of hospitalists, endocrinologists, nurses and other team members who take care of hospitalized patients with diabetes and hyperglycemia.
