Protecting Mobile Networks and Devices Weizhi Meng,Xiapu Luo,Steven Furnell,Jianning Zhou,2016-11-25 This book gathers and analyzes the latest attacks, solutions, and trends in mobile networks. Its broad scope covers attacks and solutions related to mobile networks, mobile phone security, and wireless security. It examines the previous and emerging attacks and solutions in the mobile networking worlds, as well as other pertinent security issues. The many attack samples present the severity of this problem, while the delivered methodologies and countermeasures show how to build a truly secure mobile computing environment.

SMS 2003 Recipes Greg Ramsey,Warren Byle,2007-02-01 SMS 2003 Networking Recipes provides hundreds of quick-reference solutions for the Windows administrator. The book addresses a wide range of problems that all levels of SMS administrators have reported to our authors in the course of their real-world jobs. Some are simple, beginning implementation solutions, while others address high-end automation techniques. The recipes in this book were not selected whimsically, nor on the basis of what the authors found cool or interesting, but rather on the frequency and importance of complaints experienced by the authors in practical business environments.

SMS 2003 Administrator's Reference Ron D. Crumbaker,2007-02-05 Systems Management Server (SMS) 2003 is Microsoft's centralized administration tool that IT departments use to remotely deploy applications, apply security patches, and provide IT hardware and software inventory management and asset control Each chapter features a task and an outline for what is to be accomplished, along with the functionality that is required, the tools or scripts that are necessary, and the ideal results A common environment is presented throughout the text to allow readers to become familiar with it as they advance through the chapters Featured tasks include standardizing and replicating site settings, hardware and software inventory, software metering, reporting software updates, and troubleshooting

New Threats and Countermeasures in Digital Crime and Cyber Terrorism Dawson, Maurice,2015-04-30 Technological advances, although beneficial and progressive, can lead to vulnerabilities in system networks and security. While researchers attempt to find solutions, negative uses of technology continue to create new security threats to users. New Threats and Countermeasures in Digital Crime and Cyber Terrorism brings together research-based chapters and case studies on security techniques and current methods being used to identify and overcome technological vulnerabilities with an emphasis on security issues in mobile computing and online activities. This book is an essential reference source for researchers, university academics, computing professionals, and upper-level students interested in the techniques, laws, and training initiatives currently being implemented and adapted for secure computing.

Computational Science and Its Applications - ICCSA 2005Part II Osvaldo Gervasi,2005-04-27 The four-volume set LNCS 3480-3483 constitutes the refereed proceedings of the International Conference on Computational Science and Its Applications, ICCSA 2005, held in Singapore in May 2005. The four volumes present a total of 540 papers selected from around 2700 submissions. The papers span the whole range of computational science, comprising advanced applications in virtually all sciences making use of computational techniques as well as foundations, techniques, and methodologies from computer science and mathematics, such as high performance computing and communication, networking, optimization, information systems and technologies, scientific visualization, graphics, image processing, data analysis, simulation and modelling, software systems, algorithms, security, multimedia etc.

Remote Work and Collaboration: Breakthroughs in Research and Practice Management Association, Information Resources,2017-03-20 The implementation of teleworking has enhanced the workforce and provided more flexible work environments. This not only leads to more productive workers, but it allows for a more diverse labor force. Remote Work and Collaboration: Breakthroughs in Research and Practice examines the benefits and challenges of working with telecommuting associates in the modern work environment. Including innovative studies on unified communications, data sharing, and job satisfaction, this multi-volume book is an ideal source for academicians, scientists, business entrepreneurs, practitioners, managers, and policy makers actively involved in the contemporary business industry.

Pro SMS 2003 Rod Kruetefeld,2007-02-01 Microsoft's Systems Management Server (SMS) allows network administrators to provide software updates to users quickly and cost-effectively from a single machine. The administrator can update every user in a network at once, or choose a group of individuals - even a single user. All this can be accomplished from the administrator's computer: no need to visit everyone's computer to make changes, as in days of old. The SMS 2003 Field Guide addresses real-world problems and solutions, based on the broad consulting experience of the author. He knows where network administrators are liable to make mistakes, and offers help at their level.

Mobile Messaging Technologies and Services Gwenaël Le Bodic,2003-06-13 Mobile messaging is practically the first data communication service in the wireless domain. It is a major advance on the conventional practice of providing only voice communication service over the wireless interface. Thus, mobile messaging is the initial step to bring the Internet to wireless terminals and has considerable importance both for mobile communication and the Internet. Mobile Messaging provides an in-depth description of

messaging technologies supported by mobile networks. It covers the Short Message Service (SMS), Enhanced Messaging Service (EMS) through to the more complex and emerging Multimedia Messaging Service (MMS). The Short Message System (SMS) has proved to be incredibly popular and is supported by most GSM, TDMA and CDMA mobile networks. This volume focuses on the Short Message Service introduced by the European Telecommunications Standard Institute (ETSI) for GSM and GPRS networks. On the basis of ETSI standard, the 3rd Generation Partnership Project (3GPP) is currently the organisation responsible for maintaining the SMS technical specifications. In its most basic form, the Short Messaging Service allows users to exchange short messages composed of a limited amount of text and it is expected that up to 100 Billion short messages could be exchanged monthly by the end of 2002. The Enhanced Message Service (EMS), an application-level extension of SMS, supersedes basic SMS features by allowing elements such as images, animations, formatted text and monophonic melodies to be inserted in short or concatenated messages. Recently, the 3GPP has been focusing on the development of the Multimedia Message Service (MMS). MMS features include the exchange of messages containing polyphonic melodies, large images, video elements sometimes organised with a multimedia presentation language such as SMIL or XHTML. MMS will be supported by 2.5 G and 3G networks. MMS specifications have reached a fairly mature stage and MMS commercial solutions are appearing on the market. Unlike EMS, MMS has been specified by the 3GPP as a service independent from the underlying network technologies. In parallel to the 3GPP standardisation process, other organisations have specified network-specific implementations of MMS such as the WAP implementation defined by the WAP Forum. In order to develop applications using Short, Enhanced and Multimedia messaging technologies, engineers have to become familiar with the use of technical specifications produced by various standard development organisations such as the 3GPP, the WAP Forum and the IETF and this is the first book to pull this vast array of material together. * Provides an in depth description of the different messaging services and messaging technologies * Presents an introduction to mobile networks * Features numerous practical implementation examples * Provides a unique easy-to-follow presentation of messaging services and mobile networks within a single publication Essential reading for content providers, service providers, network operators and telecommunications manufacturers, researchers, postgraduate students, marketing and standardisation personnel.

Language Learning Online: Towards Best Practice Uschi Felix, 2003-01-01 This important and accessible book identifies the key elements in the quest for best practice in online language teaching. The authors, all of them international experts who have made significant contributions to the debate about how to exploit the new technologies, consider online language teaching from three crucial perspectives: design, tools and pedagogy. Their recommendations are such that they can actually be realised in spite of the limitations of today's educational environments. The book demonstrates that the new technologies offer far greater potential for authentic encounters and constructivist learning than even the best classroom simulations; that automated exercise and feedback structures can be individualised and meaningful; and that if we have to teach fully by distance, these ventures no longer need to represent impoverished versions of live classes but can engender a strong sense of community. To achieve this we need to understand what elements constitute good design both in technical and pedagogical terms, to think seriously about providing the best feedback possible, and to have the courage to take the risks associated with letting go of traditional learner/teacher relationships.

Research Anthology on Mental Health Stigma, Education, and Treatment Management Association, Information Resources, 2021-02-05 In times of uncertainty and crisis, the mental health of individuals become a concern as added stressors and pressures can cause depression, anxiety, and stress. Today, especially with more people than ever experiencing these effects due to the Covid-19 epidemic and all that comes along with it, discourse around mental health has gained heightened urgency. While there have always been stigmas surrounding mental health, the continued display of these biases can add to an already distressing situation for struggling individuals. Despite the experience of mental health issues becoming normalized, it remains important for these issues to be addressed along with adequate education about mental health so that it becomes normalized and discussed in ways that are beneficial for society and those affected. Along with raising awareness of mental health in general, there should be a continued focus on treatment options, methods, and modes for healthcare delivery. The Research Anthology on Mental Health Stigma, Education, and Treatment explores the latest research on the newest advancements in mental health, best practices and new research on treatment, and the need for education and awareness to mitigate the stigma that surrounds discussions on mental health. The chapters will cover new technologies that are impacting delivery modes for treatment, the latest methods and models for treatment options, how education on mental health is delivered and developed, and how mental health is viewed and discussed. It is a comprehensive view of mental health from both a societal and medical standpoint and examines mental health issues in children and adults from all ethnicities and socio-economic backgrounds and in a variety of professions, including healthcare, emergency services, and the military. This book is ideal for psychologists, therapists, psychiatrists, counsellors, religious leaders, mental health support agencies and organizations, medical professionals, teachers, researchers, students, academicians, mental health practitioners, and more.

Rules and Rule Markup Languages for the Semantic Web Asaf Adi, Suzette Stoutenburg, Said Tabet, 2005-10-24 RuleML 2005 was the first international conference on rules and rule markup languages for the Semantic Web, held in conjunction with the International Semantic Web Conference (ISWC) at Galway, Ireland. With the success of the RuleML workshop series came the need for extended research and applications topics organized in a conference format. RuleML 2005 also accommodated the first Workshop on OWL: Experiences and Directions. Rules are widely recognized to be a major part of the frontier of the Semantic Web, and critical to the early adoption and applications of knowledge-based techniques in business, especially enterprise integration and B2B e-commerce. This includes knowledge representation (KR) theory and algorithms; markup languages based on such KR; engines, translators, and other tools; relationships to standardization efforts; and, not least, applications. Interest and activity in the area of rules for the Semantic Web has grown rapidly over the last five years. The RuleML 2005 Conference was aimed to be this year's premiere scientific conference on the topic. It continued in topic, leadership, and collaboration with the previous series of three highly successful annual international workshops (RuleML 2004, RuleML 2003 and RuleML 2002). The theme for RuleML 2005 was rule languages for reactive and proactive rules, complex event processing, and event-driven rules, to support the emergence of Semantic Web applications. Special highlights of the RuleML 2005 conference included the keynote address by Sir Tim Berners-Lee, Director of W3C.

Near Field Communications Handbook Syed A. Ahson, Mohammad Ilyas, 2016-04-19 From basic concepts to research grade material and future directions, the Near Field Communications Handbook provides comprehensive technical coverage of this rapidly emerging field. Walking readers through emerging applications, it offers a glimpse at a future in which near field communication (NFC) technology is fully integrated into daily life.

Digital excellence in agriculture in Europe and Central Asia Food and Agriculture Organization of the United Nations, International Telecommunication Union, 2021-10-26 The present report is the outcome of the joint call on good practices on

Digital Excellence in Agriculture, organized by the International Telecommunication Union (ITU) Office for Europe and Office for CIS and the Food and Agriculture Organization (FAO) of the United Nations Office for Europe and Central Asia. The document presents a summary version of the 171 eligible submissions of good practices and innovative solutions advancing the digital transformation of agriculture in Europe and Central Asia. This call complements the joint FAO-ITU review on the Status of Digital Agriculture in 18 countries of Europe and Central Asia (ITU-FAO, 2020)¹ and provides evidence on how Information and Communication Technologies (ICTs) play an emerging role in the agriculture landscapes of the regions, acting as an engine for agricultural development. However, the adoption of digital technologies in agriculture differs from country to country, and from region to region. The review in the 18 countries highlighted that smallholder farmers have yet to experience the widespread benefits of this digital transformation, and they are lagging behind when it comes to the adoption of digital agriculture solutions and innovations due to lack of trust in the potential of ICTs, limited digital skills, connectivity issues and restricted availability of ICT-based solutions to utilize and scale up. Realizing the full potential of digital agriculture transformation requires identifying, sharing and implementing best practices and proven solutions across countries, involving all actors in participatory processes.

Technology options for engaging respondents in self-administered questionnaires and remote interviewing Sarah L. Cook,Mandy Sha,Joe Murphy,Charles Q. Lau,2016-03-15 Moving away from in-person interviewing and toward self-administered questionnaires (SAQs) reduces costs but also raises questions about data quality. Without an interviewer present, respondents may lose their engagement with the survey, leading to breakoffs and greater measurement error. One way to potentially reduce these errors is to leverage new technologies to enhance respondent engagement. Another is to use remote interviewers, which is more budget-friendly than in-person interviewers. In this paper, we describe new technology options to keep respondents engaged with SAQs and harness remote interviewing capabilities: mobile data collection, short message service and instant messaging, video interviewing, and virtual worlds. Drawing from literature and professional experience, we discuss the functioning and implications of these recent technologies for respondent engagement and additional indicators, such as respondent burden, accuracy, and retention. This paper serves as a starting point for researchers considering technological options for conducting SAQs or remote interviews to reduce costs while continuing to engage respondents without sacrificing quality.

Revolutionizing Tropical Medicine Kerry Atkinson,Prof. David Mabey,2019-05-29 A comprehensive resource describing innovative technologies and digital health tools that can revolutionize the delivery of health care in low- to middle-income countries, particularly in remote rural impoverished communities Revolutionizing Tropical Medicine offers an up-to-date guide for healthcare and other professionals working in low-resource countries where access to health care facilities for diagnosis and treatment is challenging. Rather than suggesting the expensive solution of building new bricks and mortar clinics and hospitals and increasing the number of doctors and nurses in these deprived areas, the authors propose a complete change of mindset. They outline a number of ideas for improving healthcare including rapid diagnostic testing for infectious and non-infectious diseases at a point-of-care facility, together with low cost portable imaging devices. In addition, the authors recommend a change in the way in which health care is delivered. This approach requires task-shifting within the healthcare provision system so that nurses, laboratory technicians, pharmacists and others are trained in the newly available technologies, thus enabling faster and more appropriate triage for people requiring medical treatment. This text: Describes the current burden of communicable and non-communicable diseases in low- to middle-income countries throughout the world Describes the major advances in healthcare outcomes in low-to middle-income countries derived from implementation of the United Nations/World Health Organisation’s 2000 Millennium Development Goals Provides a review of inexpensive rapid diagnostic point-of-care tests for infectious diseases in low-resource countries, particularly for people living in remote rural areas Provides a review of other rapid point-of-care services for assessing hematological function, biochemical function, renal function, hepatic function and status including hepatitis, acid-base balance, sickle cell disease, severe acute malnutrition and spirometry Explores the use of low-cost portable imaging devices for use in remote rural areas including a novel method of examining the optic fundus using a smartphone and the extensive value of portable ultrasound scanning when x-ray facilities are not available Describes the use of telemedicine in the clinical management of both children and adults in remote rural settings Looks to the future of clinical management in remote impoverished rural settings using nucleic acid identification of pathogens, the use of nanoparticles for water purification, the use of drones, the use of pulse oximetry and the use of near-infrared spectroscopy Finally, it assesses the potential for future healthcare improvement in impoverished areas and how the United Nations/World Health Organization 2015 Sustainable Development Goals are approaching this. Written for physicians, infectious disease specialists, pathologists, radiologists, nurses, pharmacists and other health care workers, as well as government healthcare managers, Revolutionizing Tropical Medicine is a new up-to-date essential and realistic guide to treating and diagnosing patients in low-resource tropical countries based on new technologies.
