World War II Trucks and Tanks John Norris,2012-09-01 Many thousands of different types of vehicles were used by the armies during the Second World War for various roles, including the fighting vehicles such as armoured cars and tanks. Today these are very popular with enthusiasts who restore these historic vehicles to their pristine state and attend specialist gatherings around the UK, Europe and the USA. This book explores original and reconstructed military vehicles from British, US, Russian, Italian and German forces using stunning colour photographs. It also provides a detailed history of each vehicle's development and use in the war, plus a wealth of technical information and rare internal shots. The range of vehicles includes trucks, ambulances, half-tracks, motorcycles, bulldozers, armoured cars and of course the impressive range of tanks, from tankettes to the fearsome German Tiger. Some vehicles are so rare that examples have been recreated using designs of the era and together with the original vehicles their fascinating wartime experiences are revealed. From the Moto Guzzi tricycle to the Schwimmwagen, the T-34 to the Austin ambulance, this is the perfect book for recreating, restoring and exploring the history of these classic military vehicles.

Commer Commercial Vehicles Peter Daniels,2018-03-19 Originally formed in Lavender Hill, South London, the Commercial Car Company soon opened a brand new factory in Luton, Bedfordshire, where it produced its first truck in 1907, with the first Commer bus appearing in 1909. Producing over 3,000 vehicles for the military during the First World War, Commer went bust in the 1920s and was bought by Humber, becoming part of the Rootes Group in 1931. Again producing many thousands of truck during World War Two, Commer entered the post-war era with a modern series of trucks and light commercials. Unusually, the company made its own diesel engine, the TS3, a two-stroke design with a distinctive noise that earned it the nickname Commer Knocker . In the 1960s, production moved to Dunstable and by the late 1970s Rootes had been sold to Chrysler, which rebranded the truck division as Dodge. After the Peugeot takeover, the vans and commercials were developed in partnership with the Renault truck division. Perhaps the most famous of the Commer vehicles was the PA/PB van, which was used by the post office in its thousands, as well as being converted into camper vans. Many still survive to this day, despite production of Dodges ceasing in the 1990s. Peter Daniels tells the story of Commer commercial vehicles in this new book.

Fuel Distribution Networks Adam Strozek,2009-10-08 Inhaltsangabe:Introduction: Transport is a key factor in modern economies. There are an estimated 31.5 million road goods vehicles running on Europe s motorways each year, which are coping with a steadily increasing amount of goods transported. Although these vehicles are crucial to guarantee the ubiquitous goods availability we are used to, and to assure the flexibility of European industry, they are also part of mankind s most pressing current problems. For instance, the emission of greenhouse gases, i.e. carbon dioxide (CO₂), methane (CH₄), nitrous oxide (NO₂), hydrofluorocarbons (HFC), perfluorocarbons (PFC) and sulphur hexafluoride (SF₆), due to fuel combustion in goods transport constitutes about 20 per cent of overall greenhouse gas emission and is only outnumbered by emissions of the energy industry. Overall decrease of these contaminants shall be, of course, one of the main objectives in the long-term, but in particular within urban agglomerations it is also of great interest to decrease local emission levels as a first step. Changing over to less carbon-intensive fuels can reduce local carbon dioxide and other emissions, even if the well-to-wheel emission level does not improve notably. Apart from the emission problem, nearly 99% of the overall fuel consumption in transport is provided by fossil fuels and therefore competing for the finite crude oil resources with other industries, in particular the energy industry. There are many different forecasts of how long world s oil reserves will last, but independently of these estimations it is undeniable that they will end sometime. Hence, it is the second vital transport-related challenge to make it independent from fossil energy resources by developing and introducing renewable fuels, complying technologies to run them and a reliable infrastructure to distribute them. Although there are still many problems to solve regarding technical issues, many viable solutions for running vehicles by other means than diesel and gasoline are already available. However, the biggest problem seems to be the distribution. Since vehicles and fueling infrastructure are complementarities, most customers do not use these vehicles because they can not refill them properly, and fuel companies do not introduce new fuel stations due to a lack of customers, that would use them. Consequently the main challenge currently is to break through this chicken-egg problem and build up a fuel distribution network, which [...]

Data Analytics: Paving the Way to Sustainable Urban Mobility Eftihia G. Nathanail,Ioannis D. Karakikes,2018-12-11 This book aims at showing how big data sources and data analytics can play an important role in sustainable mobility. The different chapters, which report on contributions presented at the 4th Conference on Sustainable Urban Mobility, held on May 24-25, 2018, in Skiathos Island, Greece, cover different thematic areas, such as social networks and traveler behavior, applications of big data technologies in transportation and analytics, transport infrastructure and traffic management, transportation modeling, vehicle emissions and environmental impacts, public transport and demand responsive systems, intermodal interchanges, smart city logistics systems, data security and associated legal aspects. They show in particular how to apply big data in improving urban mobility, discuss important challenges in developing and implementing analytics methods and provide the reader with an up-to-date review of the most representative research on data management techniques for enabling sustainable urban mobility

Training in the Motor Vehicle Repair and Sales Sector in the United Kingdom European Centre for the Development of Vocational Training,1994 An international team of researchers studied the following aspects of training in the United Kingdom's motor vehicle repair and sales sector: structure and characteristics; institutional and social context; relationship to the labor market; changing structural, economic, and organizational conditions; and training/recruitment and relationship to the British education system. Government statistics were analyzed, and case studies were conducted of five very different companies, including a small franchise of a major auto maker, a large dealership/service center, a vehicle electrical system repairer that is 1 of 700 outlets, and a family business. Each case study included a profile of the company, its personnel management and vocational policies, and its provisions for continuing/ongoing training. The study concluded that the British automotive industry exemplified the demise of the country's vocational and education training system. Although the recent national system of vocational qualifications and other initiatives have promised to improve the level and consistency of training provision in the automotive industry, the main issue now facing individual dealerships remains that of finding the resources to invest in the level of training required to produce the skilled employees demanded by vehicle manufacturers, government standards, and market pressures.
