Ciudades para las personas Sierra Navarro, Isabel, 2015-01-01 Si es cierto que cada semana emigran a una ciudad 1,3 millones de personas en el mundo, es muy probable que más de 6.000 millones de personas se concentren en unas 21 mega ciudades en solo 30 años. Una de las preocupaciones que genera esta tendencia es la complejidad en la gestión de los recursos naturales, los transportes, la oferta de vivienda y servicios para todos y, desde ese punto de vista, está emergiendo con fuerza el movimiento de las Smart Cities, que prioriza la racionalidad, comodidad y eficiencia en la gestión de la ciudad, de acuerdo a las tecnologías de la información y comunicación. Pero también nos preocupa un aspecto fundamental para la calidad de vida de los habitantes de esas ciudades, partiendo también del conocimiento que nos aportan las Ciencias Sociales y ambientales que estudian desde hace años los fenómenos urbanos: la segmentación social, el aumento de las desigualdades, las amenazas climáticas y de contaminación del aire o el agua y, especialmente, el impacto que esos fenómenos tienen sobre el bienestar social y la salud de las personas. Tenemos muchos retos en ese sentido, y en este libro se abordan de forma exhaustiva teniendo como eje el conjunto de las necesidades humanas, sus contextos de vida, y aquellos aspectos urbanos que más inciden en ellos, pudiendo convertirse en factores de riesgo para la cohesión social y la salud urbana. En esta obra encontramos la fundamentación científica que avala la relación estrecha entre el entorno urbano y la calidad de vida de las personas, analizando espacios como la vivienda, el modelo urbanístico, los transportes, la interacción social y el medio ambiente, siempre desde el punto de vista de las personas y sus necesidades como seres biológicos y sociales. Podemos encontrar también comentarios y propuestas de expertos que ofrecen una visión de conjunto orientada a la mejora urbana desde un punto de vista global y también casos reales de buenas prácticas, animando a los lectores a completar con sus propias experiencias. También se aporta una visión multidisciplinar -psicología social, ambiental y arquitectura- para definir propuestas de análisis de la realidad urbana, sistemas de planificación integrales y mecanismos de participación ciudadana que apoyen la estrategia de la ciudad para todos, una ciudad construida por y para los ciudadanos, que incorpore las técnicas más innovadoras desde el punto de vista del urbanismo y la arquitectura, pero también de la sostenibilidad medioambiental y la innovación social: ciudades saludables (como recomienda la OMS) y sostenibles (en el marco de la Agencia Europea del Medio Ambiente), pensadas para la vida y la convivencia.

La política vigilada Antoni Gutiérrez Rubí, 2012-05-04 En una sociedad decepcionada, crítica y muy informada, la política democrática está cada vez más vigilada por los ciudadanos. Se está produciendo un cambio radical en la comprensión y aceptación de una determinada praxis en la gestión política e institucional. Este libro pretende explorar el fenómeno creciente de la política vigilada, haciendo un recorrido por los principales conceptos que la sustentan y explican, mostrando iniciativas que, sin ánimo compilatorio, nos enseñan cómo la ciudadanía digital y los nuevos actores sociales irrumpen en el panorama mediático y en la construcción de la agenda pública con una inusitada fuerza, legitimidad y visibilidad. El libro debe ser un acicate para la renovación y un contrapunto para romper la fuerza y la exclusividad (y con ella, sus posibles déficits) de los partidos en el sistema democrático.

La política puede ser rescatada de su deriva.

Smart Cities in the Mediterranean Anastasia Stratigea, Elias Kyriakides, Chrysses Nicolaidis, 2017-04-25 This book sheds new light on the current and future challenges faced by cities, and presents approaches, options and solutions enabled by Information and Communication Technologies (ICT) in the smart city context. By focusing on sustainability objectives within a rapidly changing social, economic, environmental and technological setting, it explores a variety of planning challenges faced by contemporary cities and the power of smart city developments in terms of providing innovative tools, approaches, methodologies and technologies to help cities cope with these challenges. Key issues addressed include smart city (e-) planning and (e-) participation; smart data management to facilitate decision-making processes in cities and insular communities on a variety of topics; smart and sustainable management aspects of climate change, water scarcity, mobility, energy, infrastructure, tourism, blue growth, risk assessment; etc. The book presents current and potential pathways and applications for the evolution of smart cities and communities, taking into consideration the unique problems and opportunities emanating from their specific geographical location. The case study examples mainly concern small and medium-sized cities and communities as well as insular areas in the Mediterranean region, while also incorporating lessons learned from other parts of the world. Their focus is on the specific opportunities and threats emerging in these urban and insular environments, which are characterized by their role as globally known tourist destinations, their coastal or port character, and unique cultural resources, as well as the high rated vulnerability in very many sustainability respects (social, economic, biodiversity, urbanization, migration, poverty, etc.) to be found in the Mediterranean region at large
