Return to Point Zero Murat Somer, 2022-07-01 How did the Turkish-Kurdish Conflict arise? Why have Turks and Kurds failed for so long to solve it? How can they solve it today? How can social scientists better analyze this and other protracted conflicts and propose better prescriptions for sustainable peace? Return to Point Zero develops a novel framework for analyzing the historical-structural and contemporary causes of ethnic-national conflicts, highlighting an understudied dimension: politics. Murat Somer argues that intramajority group politics rather than majority-minority differences better explains ethnic-national conflicts. Hence, the political-ideological divisions among Turks are the key to understanding the Turkish-Kurdish Conflict; though

it was nationalism that produced the Kurdish Question during late-Ottoman imperial modernization, political elite decisions by the Turks created the Kurdish Conflict during the postimperial nation-state building. Today, ideational rigidities reinforce the conflict. Analyzing this conflict from premodern times to today, Somer emphasizes two distinct periods: the formative era of 1918–1926 and the post-2011 reformatory period. Somer argues that during the formative era, political elites inadequately addressed three fundamental dilemmas of security, identity, and cooperation and includes a discussion of how the legacy of those political elite decisions impacted and framed peace attempts that have failed in the 1990s and 2010s. *Return to Point Zero* develops new concepts to analyze conflicts and concrete conflict-resolution proposals.

*Business Decision Making* Alan J. Baker, 2018-04-17 Originally published in 1981. Risk is a problem which all business decision makers have to cope with. The problem is not insurmountable, however, as there now exist well-established techniques for minimising risk and for calculating which of various available options is the optimal one to pursue. This book outlines and discusses these techniques and the theories behind them. Unlike many economic theories which only rarely have any practical applications, the techniques put forward in this book can be used by real businessmen to solve real business problems. The book concentrates on decision-making in two main areas: the allocation of a firm's resources and the selection of new investments; and the techniques and theories discussed fall into three broad groups: linear programming, decision theory and capital market theory. Intended as an advanced undergraduate textbook for students taking business economics or managerial economics courses, this valuable book will interest specialists and students involved in management studies, microeconomics, strategic planning, operational research, accounting and MBA programmes.

As technology firms continue to shape our political and socio-economic landscape, this book will be an invaluable resource for scholars and students who seek to understand the function of technological monopolies in contemporary capitalism.

**The theory of the kingdom: A unified model of human agency** Andrew Root, 2024-01-02 This original monograph presents a comprehensive theory regarding the economy of the kingdom of God. The theory and associated model will help individuals make better choices. The research integrates fundamentals of the temporal real economy, and the permanent economy of the kingdom of God, to present a unified model of human agency. According to the model, effective agents are salt and light in the real economy, arresting corruption and revealing the truth. Effective agency produces life, peace, and growth. Individual and organizational practices that arrest corruption and reveal truth can resolve longstanding economic grievances. The list of spiritual credence goods is extensive and includes commonly known virtues such as humility, patience, and hope. Spiritual goods are allocated based on the owner-agent relationship. The quantity of goods the owner supplies is in proportion to an individual's sacrificial offering of time and money. Spiritual goods are stored as heart capital. In a process analogous to the real economy, heart labor applied to heart capital produces desirable outputs. The owner relates to his agents through a heart-inscribed behavioral contract. The owner generally intervenes in the real economy by communicating with agents rather than by restricting choice. Prior studies across economics, finance, and sociology prove the efficiency of behavioral contracts and communication over restricted choice. Herein researchers will find new testable propositions, and practitioners will find new ideas and practices to live better, more consequential lives. Examples of practical applications include methods of resolving group-level bias and understanding the purpose of life's

difficulties.
