**Alan Turing: Life and Legacy of a Great Thinker** Christof Teuscher, 2013-06-29 Written by a distinguished cast of contributors, *Alan Turing: Life and Legacy of a Great Thinker* is the definitive collection of essays in commemoration of the 90th birthday of Alan Turing. This fascinating text covers the rich facets of his life, thoughts, and legacy, but also sheds some light on the future of computing science with a chapter contributed by visionary Ray Kurzweil, winner of the 1999 National Medal of Technology. Further, important contributions come from the philosopher Daniel Dennett, the Turing biographer Andrew Hodges, and from the distinguished logician Martin Davis, who provides a first critical essay on an emerging and controversial field termed hypercomputation.

*“The” Information Age* Manuel Castells, 2010

The Control Revolution James Ralph Beniger, 1986 Why do we find ourselves living in an Information Society? How did the collection, processing, and communication of information come to play an increasingly important role in advanced industrial countries relative to the roles of matter and energy? And why is this change recent--or is it? James Beniger traces the origin of the Information Society to major economic and business crises of the past century. In the United States, applications of steam power in the early 1800s brought a dramatic rise in the speed, volume, and complexity of industrial processes, making them difficult to control. Scores of problems arose: fatal train wrecks, misplacement of freight cars for months at a time, loss of shipments, inability to maintain high rates of inventory turnover. Inevitably the Industrial Revolution, with its ballooning use of energy to drive material processes, required a

corresponding growth in the exploitation of information: the Control Revolution. Between the 1840s and the 1920s came most of the important information-processing and communication technologies still in use today: telegraphy, modern bureaucracy, rotary power printing, the postage stamp, paper money, typewriter, telephone, punch-card processing, motion pictures, radio, and television. Beniger shows that more recent developments in microprocessors, computers, and telecommunications are only a smooth continuation of this Control Revolution. Along the way he touches on many fascinating topics: why breakfast was invented, how trademarks came to be worth more than the companies that own them, why some employees wear uniforms, and whether time zones will always be necessary. The book is impressive not only for the breadth of its scholarship but also for the subtlety and force of its argument. It will be welcomed by sociologists, economists, historians of science and technology, and all curious in general.

**Late Capitalism** Ernest Mandel, 1999-04-17 Late Capitalism is the first major synthesis to have been produced by the contemporary revival of Marxist economics. It represents, in fact, the only systematic attempt so far ever made to combine the general theory of the “laws of motion” of the capitalist mode of production developed by Marx, with the concrete history of capitalism in the twentieth century. Mandel’s book starts with a challenging discussion of the appropriate methods for studying the capitalist economies. He seeks to show why the classical approaches of Luxemburg, Bukharin, Bauer and Grossman failed to accomplish the further development of Marxist theory whose urgency became evident after Marx’s death. He then sketches the structure of the world market and the variant types of surplus-profit that have characterized its successive stages. On these foundations, Late Capitalism proceeds to advance an extremely

bold schema of the “long waves” of expansion and contraction in the history of capitalism, from the Napoleonic Wars to the present. Mandel criticizes and refines Kondratieff’s famous use of the notion. Mandel’s book surveys in turn the main economic characteristics of late capitalism as it has emerged in the contemporary period. The last expansionary long wave, it argues, started with the victory of fascism on the European continent and the advent of the war economies in the US and UK during the 1940s, and produced the record world boom of 1947-72. Mandel discusses the reasons why the dynamic upswing of growth in this period was bound to reach its limits at the turn of the 1970s, and why a long wave of economic stagnation and intensified class struggle has set in today. Late Capitalism is a landmark in Marxist economic literature. Specifically designed to explain the international recession of the 1970s, it is a central guide to understanding the nature of the world economic crisis today.

1950s and 1960s.

**The Power of Identity** Manuel Castells, 2011-09-20 In this second volume of The Information Age trilogy, with an extensive new preface following the recent global economic crisis, Manuel Castells deals with the social, political, and cultural dynamics associated with the technological transformation of our societies and with the globalization of the economy. Extensive new preface examines how dramatic recent events have transformed the socio-political landscape of our world Applies Castells' hypotheses to contemporary issues such as Al Qaeda and global terrorist networks, American unilateralism and the crisis of political legitimacy throughout the world A brilliant account of social, cultural, and political conflict and struggle all over the world Analyzes the importance of cultural, religious, and national identity as sources of meaning for people, and its implications for social movement Throws new light on the dynamics of global and local change

Tile & Till ,1915

*The Political Thought of Hannah Arendt* Margaret Canovan, 1974

**Technophobia** Hal Hellman, 1976-01-01 Examines the factors involved in, and the determinants of, fear of technology and its possible consequences for individuals and society

**Radiomen** Eleanor Lerman, 2015 There are two themes to *Radiomen*. First, if there are aliens interacting with our world they are likely just as confused about who or what God is as human beings are; and second, whoever they are, they're probably just as fond of dogs as we are. Laurie, a woman who works at a bar at Kennedy airport doesn't remember that when she was a child, she met an alien on the fire escape of a building where her uncle kept a shortwave radio. The radio is part of a universal network of repeaters maintained by an unknown alien race; they use the network to broadcast prayers into the universe. She meets a psychic who is actually part of a Scientology-like cult called the Blue Awareness, as well as a late-night radio host. All have their own reasons for unraveling the mystery of the lost radio network. Laurie is given a strange dog by her neighbor, an immigrant and a member of the Dogon tribe - people who believe they were visited by aliens long ago and repeat a myth about how the aliens brought dog-like animals with them. All Dogon dogs are supposedly descended from that animal. As conflict develops between the Blue Awareness leader and the other characters, the Dogon acts as an intermediary between the humans, who want to understand why the aliens need the radio network, and the aliens who need the humans to help them find a lost element of the universal network.

**End of Millennium** Manuel Castells, 1998-02-11 The final volume in Manuel Castells' trilogy is devoted to processes of global social change induced by interaction between networks and identity.

*Dialectics of the Concrete* K. Kosík, 2012-12-06 Kosík writes that the history of a text is in a certain sense the history of its interpretations. In the fifteen years that have passed since the first (Czech) edition of his *Dialectics of the Concrete*, this book has been widely read and interpreted throughout Europe, in diverse

centers of scholarship as well as in private studies. A faithful English language edition is long overdue. This publication of Kosik's work will surely provoke a range of new interpretations. For its theme is the characterization of science and of rationality in the context of the social roots of science and the social critique which an appropriately rational science should afford. Kosik's question is: How shall Karl Marx's understanding of science itself be understood? And how can it be further developed? In his treatment of the question of scientific rationality, Kosik drives bluntly into the issues of gravest human concern, not the least of which is how to avoid the pseudo-concrete, the pseudo-scientific, the pseudo-rational, the pseudo historical. Starting with Marx's methodological approach, of ascending from the abstract to the concrete, Kosik develops a critique of positivism, of phenomenalist empiricism, and of metaphysical rationalism, counter posing them to dialectical rationalism. He takes the category of the concrete in the dialectical sense of that which comes to be known by the active transformation of nature and society by human purposive activity.

*Radical Gotham* Tom Goyens, 2017-06-30 New York City's identity as a cultural and artistic center, as a point of arrival for millions of immigrants sympathetic to anarchist ideas, and as a hub of capitalism made the city a unique and dynamic terrain for anarchist activity. For 150 years, Gotham's cosmopolitan setting created a unique interplay between anarchism's human actors and an urban space that invites constant reinvention. Tom Goyens gathers essays that demonstrate anarchism's endurance as a political and cultural ideology and movement in New York from the 1870s to 2011. The authors cover the gamut of anarchy's emergence in and connection to the city. Some offer important new insights on German, Yiddish, Italian,

and Spanish-speaking anarchists. Others explore anarchism's influence on religion, politics, and the visual and performing arts. A concluding essay looks at Occupy Wall Street's roots in New York City's anarchist tradition. Contributors: Allan Antliff, Marcella Bencivenni, Caitlin Casey, Christopher J. Castañeda, Andrew Cornell, Heather Gautney, Tom Goyens, Anne Klejment, Alan W. Moore, Erin Wallace, and Kenyon Zimmer.

**February Shadows** Elisabeth Reichart, 1989 The central event in Hilde's childhood occurred on 2 February 1945. She was a confused but compliant girl at the time. Now she is a depressed and angry old woman, who is haunted by the memory of that shameful day. For on that day in February, the ordinary citizens of her village hunted down and murdered approximately 500 prisoners who had escaped from the concentration camp in Mauthausen. This brilliant novel renders the experiences of common people caught up in the political cyclone of the time, reminding us that history is not behind us, nor is it outside us.

**The Making of Marx's Capital, Volume 2** Roman Rosdolsky, 1977 Roman Rosdolsky investigates the relationship between various versions of Capital and explains the reasons for Marx's successive reworking.
