It is said to be run by banks that would want to manipulate the World of Crypto World after the people discover how blockchain can change the way we deal with money. Ripple is a payment protocol promises to send frictionless sending of money all over the World. In is instant, and safe. Looking at the code of Ripple, it is own by a private company rather than an open one. Ripple is being used by different banks around the World and it is famous. It's native currency XRP (ripple) has been consistently part of the top 5 in Coin Market Cap competing with Bitcoin, Ethereum, Litecoin, Bitcoin Cash, Cardano, NEO, Stellar, DASH and IOTA. People on forums and Facebook Groups keep on bashing those who are investing in Ripple saying that they are supporting the banks and everything will just rotate and be back to where it used to. Blockchain is made to remove the third parties, and Ripple is says to contradict to that. Is it true that

it is own by banks? It is centralized? I made a study about all of this, and wrote a book to look into much detail. If you are interested in knowing more about it, how you can start investing, mining or trading... I put all of those here. In a clear in concise manner.

Ripple Ikuya Takashima,2018-03-13 RIPPLE Grab this GREAT physical book now at a limited time discounted price! Ripple refers to both the cryptocurrency XRP, as well as its digital payment protocol which is being used by various banks and institutions all over the world. To understand the world of Ripple and what sets it apart from the rest, you will first need to understand the basic workings of the system itself.In reality, Ripple has become more known for its payment solution and technology than for its cryptocurrency. This is because within the Ripple system, money can be transferred in whatever form the users prefer. The system allows transactions in US dollar, Euro, Yen, Pound, Bitcoin, Ether, Litecoin, or XRP. This open source platform makes Ripple easy to integrate into various other existing infrastructure and protocols, which is an advantage for both Ripple and its community of users. The Ripple system operates in a very close system of trust between different parties, and there is also a system of debt or credit lines involved in the process. To simplify the process, the

sender will log on to his Ripple gateway (conduit or agent), deposits the money into this Ripple gateway, and sends the instruction for the funds to be released to the receiver. The receiver will receive the funds by logging on to his preferred receiver. In this Ripple payment protocol, the transfers are not limited to money. Cryptocurrencies can be sent as long as the gateways are able to transact in them. Gold and other precious materials may also be transacted. The important thing is to find gateways that are willing and able to perform the transaction. Suppose, for instance, that the sender wants to send \$1000 to the receiver, but the sender's own gateway does not have a direct trust relationship with the receiver's gateway. What the Ripple algorithm will attempt to do is to find a chain, or several intermediary gateways which can act as the conduit for the transaction to go through. Ripple's protocol will try to find the shortest and quickest link between gateways in order to process the transaction. Now, what if the Ripple network has attempted to find a chain of trust between two different gateways to process a transfer, but cannot locate a chain? This is where the Ripple cryptocurrency or XRP comes into play. XRP may be used within the Ripple network to convert money or goods being transferred. All currencies and goods will have an XRP price, and the sender can then choose to convert to XRP, send the XRP through the chain, to get to the receiver. The receiver, meanwhile, can opt to convert the XRP back to the original currency from his own gateway. In the Ripple network, users are transacting currencies, commodities, and other units of value seamlessly. Chris Larsen, one of the co-founders of Ripple Labs and who also has extensive experience in digital finance (having founded e-Loan and Prosper), referred to the Ripple protocol as HTTP for money. Larsen likens Ripple to gold as a standard of currency, because gold requires liquidity, trust, and utility to become a standard. It's analogous to the Bitcoin networks. Any user can use the protocol just like they would HTTP. You can build on top of it without licensing it from

Podzus, 2019-12-22 Ripple is interesting in that it's the only other system that does something with trust besides concentrate it into a central server. Probably because of this, Bitcoin maximalists later offered 500 USD each for spreading negative information about Ripple & XRP. Much of this false information still persists. In this book you will learn why RIPPLE & XRP is a very special cryptocurrency and how you can benefit from it. After reading this book, you will understand why establishing a new global financial infrastructure through Ripple is only the first step of a mission they are already further along than many people think. After reading this book you will understand what is the difference between Ripple and XRP how Ripple is establishing a

new financial infrastructure and what they have already achieved what the vision of the Internet of Value means to all of us what role the cryptocurrency XRP plays and what potential it has why XRP is not in competition with Bitcoin and all other digital currencies how you can buy XRP in Europe and store it safely how you can meet the XRP community

Ripple and XRP for Beginners Roman Alexander,2018-01-22 The Ripple - Revolution has arrived! Learn everything you need to know about Ripple and how to use this fantastic crypto-currency. Have you checked out Ripple and wondered how you can use it? Have you bought Ripple, but still want to learn the foundations of

this leading crypto-currency? Then this book is the right one for you! Bitcoin is not the only digital currency, because there are many different alternatives. The second most important crypto-currency after Bitcoin is Ripple. What is Ripple? How is it different from Bitcoin? You might have read somewhere that Ripple wants to replace the SWIFT payment network. Your bank uses SWIFT for international payments, that's why they're so slow. You might have read, that Ripple wants to establish an international payment network at low cost. But what is the fuss all about? Ripple is basically a protocol, a blockchain application, which offers various functions for banks, but it also contains the crypto-currency XRP. With the Blockchain technology Ripple and Bitcoin use the same foundation, but Ripple has another way to use it. Basically, Ripple aims to win over banks and financial intermediaries - that's why Ripple is the fastest and most scalable crypto-currency out there. Unlike Bitcoin with its seven transactions per second, Ripple processes currently 2.000 per second (and it can do even more! =). There are plenty of books on Bitcoin, but Ripple is even older: it was founded in 2004! This book will answer the following questions: * How does Ripple work? * How and where buy XRP? * For what can XRP and Ripple be used? * How will XRP and Ripple develop in the future? If the plan doesn't work, change the plan, but don't lose sight of the goal! Go with your mouse up and click on Buy now!

Machine Learning Methods with Noisy, Incomplete or Small Datasets Jordi Solé-Casals, Zhe Sun, Cesar F. Caiafa, Toshihisa Tanaka, 2021-08-17 Over the past years, businesses have had to tackle the issues caused by numerous forces from political, technological and societal environment. The changes in the global market and increasing uncertainty require us to focus on disruptive innovations and to investigate this phenomenon from different perspectives. The benefits of innovations are related to lower costs, improved efficiency, reduced risk, and better response to the customers' needs due to new products, services or processes. On the other hand, new business models expose various risks, such as cyber risks, operational risks, regulatory risks, and others. Therefore, we believe that the entrepreneurial behavior and global mindset of decision-makers significantly contribute to the development of innovations, which benefit by closing the prevailing gap between developed and developing countries. Thus, this Special Issue contributes to closing the research gap in the literature by providing a platform for a scientific debate on innovation, internationalization and entrepreneurship, which would facilitate improving the resilience of businesses to future disruptions.
