**Mathematics of Public Health** Jummy David, Jianhong Wu, 2023-12-30 This volume addresses SDG 3 from a mathematical standpoint, sharing novel perspectives of existing communicable disease modelling technologies of the next generation and disseminating new developments in modelling methodologies and simulation techniques. These methodologies are important for training and research in communicable diseases and can be applied to other threats to human health. The contributions contained in this collection/book cover a range of modelling techniques that have been and may be used to support decision-making on critical health related issues such as: Resource allocation Impact of climate change on communicable diseases Interaction of human behaviour change, and disease spread Disease outbreak trajectories projection Public health interventions evaluation Preparedness and mitigation of emerging and re-emerging infectious diseases outbreaks Development of vaccines and decisions around vaccine allocation and optimization The diseases and public health issues in this volume include, but are not limited to COVID-19, HIV, Influenza, antimicrobial resistance (AMR), the opioid epidemic, Lyme Disease, Zika, and Malaria. In addition, this volume compares compartmental models, agent-based models, machine learning and network. Readers have an opportunity to learn from the next generation perspective of evolving methodologies and algorithms in modelling infectious diseases, the mathematics behind them, the motivation for them, and some applications to supporting critical decisions on prevention and control of communicable diseases. This volume was compiled from the weekly seminar series organized by the Mathematics for Public Health (MfPH) Next Generation Network. This network brings together the next generation of modellers from across Canada and the world, developing the latest mathematical models, modeling methodologies, and analytical and simulation tools for communicable diseases of global public health concerns. The weekly seminar series provides a unique forum for this network and their invited guest speakers to share their perspectives on the status and future directions of mathematics of public health.

**Beweisen** Martin Stein, 2022-02-28 Die hier vorgelegte Neuauflage der Habilitationsschrift des Verfassers von 1984 zeigt den Stand der Forschung zu Fragen des Beweisens im Mathematikunterricht in den frühen 80er Jahren und bringt erste Ansätze qualitativer Untersuchungen zu diesem Thema. Die hier vorgestellten theoretischen Analysen zum Beweisen bauen auf einer so vollständig wie irgend möglichen Erfassung aller deutsch- und englischsprachigen Literatur zur Logik in der Oberstufe und zum Beweisen auf, die im Zentralblatt für Didaktik der Mathematik veröffentlicht worden sind und insgesamt ca. 550 Positionen umfassen (mit Doppelnennung). Anschließend werden die Phasen des Beweisprozesses und die ihn beeinflussenden Faktoren beschrieben. Dabei gehen sowohl theoretischen Analysen wie auch umfangreiche empirische Auswertungen in die Beschreibung ein. Hervorzuheben ist die Beobachtung, dass bei den beeinflussenden Faktoren auch die impliziten Vorstellungen der Schüler\*innen zum Beweisen eine Rolle spielen, und dass diese wiederum durch das Untersuchungsdesign beeinflusst werden. Eine Unterrichtsreihe zur Förderung der Beweisfähigkeit auf konkretem Niveau schließt das Buch ab. Das Buch wurde 1989 mit dem damit erstmalig verliehenen Förderpreis der Gesellschaft für Didaktik der Mathematik (GDM) ausgezeichnet. Industrial Electronics and Control BISWANATH PAUL, 2014-06-30 The third edition of the book on Industrial Electronics and Control including Programmable Logic Controller is aimed at providing an explicit explanation of the mode of operation of different electronic power devices in circuits and systems that are in wide use today in modern industry for the control and conversion of electric power. The book strives to fulfil this need for a fundamental treatment that allows students to understand all aspects of circuit functions through its neatly-drawn illustrations and wave diagrams. Several colour diagrams are included to explain difficult circuits and waveforms. This approach will help students in assimilating the operation of power electronics circuits with more clarity. Same as in previous editions, the book commences with a discussion on rectifiers, differential amplifiers, operational amplifiers, multivibrators, timers and goes on to provide in-depth coverage of power devices and power electronics circuits such as silicon controlled rectifiers (SCRs), inverters, dual converters, choppers, cycloconverters and their applications in the control of ac/dc motors, and heating and welding processes. The book also presents an overview of the modern developments in the field of optoelectronics and fibre optics. Finally, the book ends with a discussion on Programmable Logic Controller (PLC). The book has an added advantage of multiple-choice questions, true/false statements, review questions and numerical problems at the end of each chapter, designed to reinforce the student's understanding of the concepts and mathematical derivations introduced in the text. The book is intended as a textbook for polytechnic students pursuing courses in electrical engineering, electronics and communication engineering, and electronics and instrumentation engineering. This tailor-made book with its exhaustive explanations of circuit operations and its student-friendly approach should prove to be a boon to the students and teachers alike. AUDIENCE: Polytechnic Students - pursuing courses in Electrical Engineering, Electronics and Communication Engineering, and Electronics and Instrumentation Engineering
