50 Model Rocket Projects for the Evil Genius Gavin D J Harper,2006-09-20 Plans, diagrams, schematics, and lists of parts and tools for model rocket projects.

Make: Rockets Mike Westerfield,2014-08-21 This book teaches the reader to build rockets--powered by compressed air, water, and solid propellant--with the maximum possible fun, safety, and educational experience. Make: Rockets is for all the science geeks who look at the moon and try to figure out where Neil Armstrong walked, watch in awe as rockets lift off, and want to fly their own model rockets. Starting with the basics of rocket propulsion, readers will start out making rockets made from stuff lying around the house, and then move on up to air-, water-, and solid propellant-powered rockets. Most of the rockets in the book can be built from parts in the Estes Designer Special kit.

Rockets : an educator's guide with activities in science, mathematics, and technology. Deborah A. Shearer,2008 This guide provides teachers and students many opportunities. Chapters within the guide present the history of rocketry, National Aeronautics and Space Administration's (NASA's) 21st Century Space Exploration Policy, rocketry principles, and practical rocketry. These topics lay the foundation for what follows--a wealth of dynamic rocket science classroom activities that work. The activities focus on Sir Isaac Newton's laws of motion and how they apply to rockets. They incorporate cooperative learning, problem solving, critical thinking, and hands-on involvement. They support national and state standards for science, mathematics, and technology across many grade levels. All of the activities are designed with the classroom in mind. They include clear descriptions, background information for the teacher and student, detailed procedures and tips, lists of readily available materials, assessments, questions for discussion, and extensions. The activities are designed to foster excitement and a passion for learning. It has been created as a two to six week classroom unit depending upon the grade level of the students but individual activities can be extracted and used as stand-alone classroom experiences. Teachers will find activity objectives and principles clearly stated along with the vocabulary terms necessary for understanding the principles involved. [The original Rockets Teacher Guide was published by NASA's Education Division in the mid-1990s.]

Introduction to Rocket Science and Engineering Travis S. Taylor,2009-02-24 An overall view of the vast spectrum of knowledge needed by practicing rocket scientists and engineers, Introduction to Rocket Science and Engineering presents the history and basics of rocket theory, design, experimentation, testing, and applications. It covers an array of fields, from advanced mathematics, chemistry, and physics to logistics, systems engineering, and politics. The text begins with a discussion on the discovery and development of rockets as well as the basic principles governing rockets and rocket science. It explains why rockets are needed from economic, philosophical, and strategic standpoints and looks at why the physics of the universe forces us to use rockets to complete certain activities. Exploring how rockets work, the author covers the concepts of thrust, momentum, impulse, and the rocket equation, along with the rocket engine, its components, and the physics involved in the generation of the propulsive force. He also presents several different types of rocket engines and discusses the testing of rocket components, subsystems, systems, and complete products. The final chapter stresses the importance of rocket scientists and engineers to think of the unusual, unlikely, and unthinkable when dealing with the complexities of rocketry. Taking students through the process of becoming a rocket scientist or engineer, this text supplies a hands-on understanding of the many facets of rocketry. It provides the ideal foundation for students to continue on their journey in rocket science and engineering.

The Future of U.S. Rocketry Edward Hujasak,1994 From Space News. January 27, 1997: Many would do well reading this treasure of facts covering the development of U.S. launch vehicles. Starting from American Robert Goddard's pioneering work, Hujasak provides an overview of a half-century of booster business. The Atlas, Delta, Titan, space shuttle and its derivations are covered, as are the Delta Clipper and the single-stage-to-orbit National Aerospace Plane project. Also covered is past work on nuclear-powered rockets, as well as looks at unconventional propulsion using lasers and interstellar ramjets. This is a straightforward, no-nonsense easy-to-read book, particularly for those unfamiliar with the evolution of U.S. space launch capability.

Rockets and Missiles A. Bowdoin Van Riper,2007-11-26 Beginning with World War II, missiles transformed the art of war. For the first time, cities of warring nations were vulnerable to sudden, unannounced, long-distance attacks. At the same time, rockets made possible one of the great triumphs of the modern age—the exploration of space. Beginning with the origins of rocketry in medieval and early modern Asia, Rockets and Missiles traces the history of the technology that led to both the great fear of global warfare and the great excitement of the Space Age. This volume focuses on rocketry in late-twentieth-century Western Europe, Russia, and the United States, as well as the spread of rocket technology to East Asia and the Middle East. It covers the full history of rocket technology—including how rockets improved in performance, reliability, and versatility and how they affected everyday life.

Staging High Power Rockets Ray R. Dunakin III,2018-10-31 Black powder rockets can be easily staged by using a booster motor that has no delay and no ejection charge, and by placing the upper stage directly over the booster in close proximity. High Power fliers don't have it so easy. Not only are higher-energy composite propellants harder to light, they must be lit from the very top of the motor core. In this booklet Ray Dunnakin walks us through techniques that allow air starting of these high power motors. Once free of the constraint of having to put the upper stage motor directly over the booster, many other configurations can be used. Ray discusses inline (with large separations), parallel and parasite staging, all with multiple motors.

I Still Have All My Fingers Dan Pollino,2011-04 What's important when building a rocket from scratch? How about high performance, ease of construction and safety. Let's face it; nobody wants to lose a limb. With over fifteen years experience building rockets, Dan Pollino's latest manual makes this seemingly daunting project simple. You'll learn such fundamental tasks as: Making the rocket body from a drain pipe Making the nosecone from a plastic wine glass Making a piston that ejects the parachute without scorching it Making an electromechanical apogee detector Making the nozzle with cement and a steel washer Making the fuel from ordinary sugar You can do it! With this book anyone can construct a high-quality rocket capable of reaching four hundred miles-per-hour and attaining an altitude of six thousand feet without a machine shop, or even special tools. Free bonus chapters including making the launch rail, making the ignition controller and launching the rocket multiple times are available online. In this easy-to-understand guide you'll find step-by-step instructions to building the perfect rocket without injuring yourself or your wallet. I Still Have All My Fingers is the rocket building bible amateur rocket enthusiasts have been waiting for. Dan Pollino's rockets have been featured on G4 TV's It's Efffin Science. His website InverseEngineering.com focuses on amateur rocketry in California.

Blazing the Trail Mike Gruntman,2004 Winner of the Luigi Napolitano Award (2006) from the International Academy of Astronautics This book presents the fascinating story of the events that paved the way to space. It

introduces the reader to the history of early rocketry and the subsequent developments that led into the space age. People of various nations and from various lands contributed to the breakthrough to space, and the book takes the reader to faraway places on five continents. It also includes many quotes to give readers a flavor of how the participants viewed the developments. Most publications on the topic either target narrow aspects of rocket history or are popular books that scratch the surface, with minimal and sometimes inaccurate technical details. This book bridges the gap. It contains numerous technical details usually unavailable in popular publications. The details are not overbearing and anyone interested in rocketry and space exploration will navigate through the book without difficulty. There are 340 figures and photographs, many appearing for the first time.

Creating Stellar Lessons with Digital Tools Kenneth J. Luterbach, 2022-05-12 Creating Stellar Lessons with Digital Tools prepares teachers in training and in-service teachers to use technologies for design and development activities with middle and high school students. While software, open resources, handheld devices, and other tools hold great potential to enhance learning experiences, teachers themselves must model technology use in ways that inspire students to become producers and leaders rather than consumers and followers. Featuring concrete applications in social studies, English, mathematics, and science scenarios, this book provides pre-service and in-service teachers with seven paths to creatively integrate and innovate with computational thinking, datasets, maker spaces, visual design, media editing, and other approaches.
