**Tunnels and Underground Cities: Engineering and Innovation Meet Archaeology, Architecture and Art** Daniele Peila, Giulia Viggiani, Tarcisio Celestino, 2020-06-30 Tunnels and Underground Cities: Engineering and Innovation meet Archaeology, Architecture and Art. Volume 6: Innovation in underground engineering, materials and equipment - Part 2 contains the contributions presented in the eponymous Technical Session during the World Tunnel Congress 2019 (Naples, Italy, 3-9 May 2019). The use of underground space is continuing to grow, due to global urbanization, public demand for efficient transportation, and energy saving, production and distribution. The growing need for space at ground level, along with its continuous value increase and the challenges of energy saving and achieving sustainable development objectives, demand greater and better use of the underground space to ensure that it supports sustainable, resilient and more liveable cities. The contributions cover a wide range of topics, from artificial intelligence techniques for geomechanical forecasting, via fiber reinforced concrete segmental lining, to advanced 4-channel scan systems for tunnel inspection. The book is a valuable reference text for tunnelling specialists, owners, engineers, archaeologists, architects, artists and others involved in underground planning, design and building around the world, and for academics who are interested in underground constructions and geotechnics.

*Archaeology Hotspot Italy* Maja Gori, Alessandro Pintucci, 2020-03-27 A full-color guide to Italy's archeology and treasures. Archaeology Hotspot Italy presents a comprehensive overview of the Italian archaeology. The main archaeological epochs - from Paleolithic to the Middle Ages - and sites and the discoveries made in the last twenty years, as well as past and present great archaeologists are thoroughly explored. Archaeology Hotspot Italy gives also insights into the way in which archaeology is practiced today, dealing with controversies over interpretation of the past connected to different theoretical approaches and present-day social and political contingencies. One of the aims of Archaeology Hotspot Italy is to give to the reader the idea that archaeology is by no means a static discipline, and that our knowledge of the past is continuously challenged by new discoveries and new approaches as well as by national and international heritage politics. It can be read either while staying comfortably at home or while traveling through Italy. Indeed, it was conceived as a handbook on Italian archaeology for armchair archaeologists as well as an archaeological guide for those visiting Italy. It provides key information on unconventional and not well-known archeological sites, which are outside of the mass tourism circuits, as well as insights on must-see sites and monuments in Italy, such as Pompeii or the Ancient city of Rome. The reader will find insights into the actual work of Italian archaeologists in current excavations, and on the challenges that they have to face. This perspective is quite unique. By combining information on archaeological sites with insights into archaeological practice, this book enables the reader to fully understand the archaeological profession in Italy. This beautiful full-color book features 44 photographs and 3 maps.

*Geotechnical Engineering for the Preservation of Monuments and Historic Sites III* Renato Lancellotta,Carlo Viggiani,Alessandro Flora,Filomena de Silva,Lucia Mele,2022-06-15 The conservation of monuments and historic sites is one of the most challenging problems facing modern civilization. It involves, in inextricable patterns, factors belonging to different fields (cultural, humanistic, social, technical, economical, administrative) and the requirements of safety and use appear to be (or often are) in conflict with the respect of the integrity of the monuments. The complexity of the topic is such that a shared framework of reference is still lacking among art historians, architects, structural and geotechnical engineers. The complexity of the subject is such that a shared frame of reference is still lacking among art historians, architects, architectural and geotechnical engineers. And while there are exemplary cases of an integral approach to each building element with its static and architectural function, as a material witness to the culture and construction techniques of the original historical period, there are still examples of uncritical reliance on modern technology leading to the substitution from earlier structures to new ones, preserving only the iconic look of the original monument. *Geotechnical Engineering for the Preservation of Monuments and Historic Sites III* collects the contributions to the eponymous 3rd International ISSMGE TC301 Symposium (Naples, Italy, 22-24 June 2022). The papers cover a wide range of topics, which include: - Principles of conservation, maintenance strategies, case histories - The knowledge: investigations and monitoring - Seismic risk, site effects, soil structure interaction - Effects of urban development and tunnelling on built heritage - Preservation of diffuse heritage: soil instability, subsidence, environmental damages The present volume aims at geotechnical engineers and academics involved in the preservation of monuments and historic sites worldwide.

**Engineering Geology for Society and Territory - Volume 6** Giorgio Lollino,Daniele Giordan,Kuroschi Thuro,Carlos Carranza-Torres,Faquan Wu,Paul Marinos,Carlos Delgado,2014-08-30 This

book is one out of 8 IAEG XII Congress volumes, and deals with the theme of applied geology, which is a critical theme for the global economy. In the international, multidisciplinary approach to major engineering projects (either to macro- or mega-scale), the application of geological investigation techniques is fundamental for properly selecting the location sites, planning the construction and maintaining the infrastructures. The contributions in this book include not only engineering constructions but also case studies related to large projects on geo-resources exploration and extraction (minerals, petroleum and groundwater), energy production (hydropower, geothermal, nuclear and others), transportation (railway and highway) and waste disposal as well as the environmental management of these and other activities. The Engineering Geology for Society and Territory volumes of the IAEG XII Congress held in Torino from September 15-19, 2014, analyze the dynamic role of engineering geology in our changing world and build on the four main themes of the congress: Environment, processes, issues, and approaches. The congress topics and subject areas of the 8 IAEG XII Congress volumes are: 1. Climate Change and Engineering Geology 2. Landslide Processes 3. River Basins, Reservoir Sedimentation and Water Resources 4. Marine and Coastal Processes 5. Urban Geology, Sustainable Planning and Landscape Exploitation 6. Applied Geology for Major Engineering Projects 7. Education, Professional Ethics and Public Recognition of Engineering Geology 8. Preservation of Cultural Heritage.
