Beautiful Light Randall Whitehead,Clifton Stanley Lemon,2021-08-12 Beautiful Light by internationally acclaimed lighting designer Randall Whitehead and lighting industry expert and educator Clifton Stanley Lemon is a combination of idea book, design resource, and product guide. It explores the transition in residential lighting from incandescent light sources to LEDs, and how to apply LED lighting with great success. It begins with the fundamental characteristics of light, including color temperature, color rendering, and spectral power distribution, and how LEDs differ from older light sources. Combining innovative graphics with the enduring design principles of good lighting, the book explains how to design with light layers, light people, and balance daylight and electric light. Every room of the house, as well as exterior and garden spaces, is addressed in 33 case studies of residential lighting with LEDs, with a wide variety of lighting projects in different styles. Showcasing over 200 color photographs of dramatic interiors beautifully lit with LEDs, and clear, concise descriptions of design strategies and product specifications, Beautiful Light helps both professionals and non-professionals successfully navigate the new era of LEDs in residential lighting.

Encyclopedia of Stage Lighting Jody Briggs,2003 If one does not know who a snuff-boy was or how his job related to stage lighting, or needs to understand the difference between motivated light and motivating light, the answers can be found in the more than 1500 detailed entries of this encyclopedia, which is ideal for students, teachers, lighting technicians, lighting designers and all others who have an interest in stage lighting. Some of the numerous topics covered are equipment, methods, concepts, design process, electricity, characteristics of light, and lightboard operations. Where applicable, entries present both the historical and current day significance of the apparatus or concept being introduced. In addition, the many areas of stage lighting that elicit debate are viewed from all angles and the various options presented. This approach will allow the reader to make a personal evaluation of the most appropriate method. Entries are extensively cross-referenced. Computer-generated line drawings and samples of lighting paperwork are included with the entries to which they relate.
