Ideology, Politics, and Diplomacy in East Central Europe Mieczysław B. Biskupski,2003 No region of the world has been more affected by the various movements of the twentieth century than East Central Europe. Broadly defined as comprising the historic territories of the Czechs, Hungarians, Poles, and Slovaks, East Central Europe has been shaped by the interaction of politics, ideology, and diplomacy, especially by the policies of the Great Powers towards the east of Europe. This book addresses Czech politics in Moravia and Czech politics in Bohemia in the nineteenth century, the international politics of relief during World War I, the Morgenthau Mission and the Polish Pogroms of 1919, the Hitler-Stalin Pact and its influence on Poland in 1939, Hungarian-Americans during World War II, and Polish-East German relations after World War II. Contributors: Bruce Garver, M. B. B. Biskupski, Neal Pease, William L. Blackwood, Anna M. Cienciala, Steven Bela Vardy, and Douglas Selvage. M. B. B. Biskupski is Professor of History at Central Connecticut State University.

Biomedical and Resonance Optics Leonid V. Tanin,Andrei L. Tanin,2020-12-10 This book discusses fundamentally new biomedical imaging methods, such as holography, holographic and resonant interferometry, and speckle optics. It focuses on the development of holographic interference microscopy and its use in the study of phase objects such as nerve and muscle fibers subjected to the influence of laser radiation, magnetic fields, and hyperbaric conditions. The book shows how the myelin sheath and even the axon itself exhibit waveguide properties, enabling a fresh new look at the mechanisms of information transmission in the human body. The book presents theoretically and experimentally tested holographic and speckle-optical methods and devices used for investigating complex, diffusely scattering surfaces such as skin and muscle tissue. Additionally, it gives broad discussion of the authors' own original fundamental and applied research dedicated to helping physicians introduce new contact-less methods of diagnosis and treatment of diseases of the cardiovascular and neuromuscular systems into medical practice. The book is aimed at a broad spectrum of scientific specialists in the fields of speckle optics, holography, laser physics, morphology and cytochemistry, as well as medical professionals such as physiologists, neuropathologists, neurosurgeons, cardiologists and dentists.

Quaternary Glaciations - Extent and Chronology J. Ehlers,P.L. Gibbard,Philip D. Hughes,2011-06-29 The book presents an up-to-date, detailed overview of the Quaternary glaciations all over the world, not only with regard to stratigraphy but also with regard to major glacial landforms and the extent of the respective ice sheets. The locations of key sites are included. The information is presented in digital, uniformly prepared maps which can be used in a Geographical Information System (GIS) such as ArcView or ArcGIS. The accompanying text supplies the information on how the data were obtained (geomorphology, geological mapping, air photograph evaluation, satellite imagery), how the features were dated (14C, TL, relative stratigraphy) and how reliable they are supposed to be. All references to the underlying basic publications are included. Where controversial interpretations are possible e.g. in Siberia or Tibet, this is pointed out. As a result, the information on Quaternary glaciations worldwide will be much improved and supplied in a uniform digital format. The information on the glacial limits is compiled in digital form by the coordinators of the project, and is available for download at: <http://booksite.elsevier.com/9780444534477/> Completely updated detailed coverage of worldwide Quaternary glaciations Information in digital, uniformly prepared maps which can be used in a GIS such as ArcView or ArcGis Step-by-step guideline how to open and use ArcGis files Possibility to convert the shapefiles into GoogleEarth kmz-files Availability of chronological controls
