*Principles of Inductive Near Field Communications for Internet of Things* Johnson I. Agbinya,2022-09-01 Near field communication devices and the emerging field of Internet of things require efficient short range communication techniques. Classical telecommunication theory however has so far focused on radiating electromagnetic signals which is more suited to terrestrial communication systems. Over the last decade however considerable research and applications of inductive methods have emerged as innovative approaches for secure short range communications by changing the paradigm of an established model of electromagnetic communications. We have witnessed the emergence of embedded inductive medical devices, magneto-inductive waveguides, inductive pots and cooking devices, magneto-inductive sensors, wireless power transfer, inductive hearing aids and the emerging inductive point-to-point communication specifically termed near-field communication (NFC) as used in mobile phones and payment cards to name a few. While there exist a large set of distributed methods and algorithms detailing the design and performances of such applications, a significant gap is observed as a lack of detailed collection of the methods in one place which could be easily understood and used quickly by someone seeking to apply the methods.In this book this missing gap is filled with the required details and the theory of near field communication systems including both the radiating and reactive (energy coupling) near-field systems in addition to the well known far field radiation techniques. The book details the fundamental expressions and design methods which facilitate the creation of near field devices and equipment including embedded biomedical implants. The book contains recent advances in inductive communications, performance, limitations and a collection of applications. It also lays a strong foundation for the application of inductive methods for creating Internet of Things systems.

*My personal Adaptive Global NET (MAGNET)* Ramjee Prasad, 2009-12-10 Every endeavour is covered by some fault, just as fire is covered by smoke. Therefore one should not give up the work born of his nature, even if such work is full of fault. – The Bhagavad-Gita (18.48) This book is the outcome of the research and development contributions of partners from three different continents, Asia, Europe, America, coming from universities, research centers, industrial partners and SMEs (Small and Medium Enterprise), all of them collaborating in MAGNET (My Adaptive Personal Global Net) and MAGNET Beyond project supported by European Commission within the Sixth Framework Programme (FP6). The project was focusing on a secure user-centric approach developing secure Personal Networks in multi-network, multi-device, and multi-user environments. The innovative concept of Personal Network (PN), which was introduced and developed in MAGNET, finds in this book the first confirmation of the success that the future of wireless communications is bound to achieve. The importance of this book is not only related to being the first work on PNs, it also gives an overview of operation of a big project, like MAGNET, and in fact the organisation of the book reflects how then project itself has been structured.

**Wireless Sensor Networks** Ibrahim M. M. El Emary, S. Ramakrishnan, 2013-08-28 Although there are many books available on WSNs, most are low-level, introductory books. The few available for advanced readers fail to convey the breadth of knowledge required for those aiming to develop next-generation solutions for WSNs. Filling this void, *Wireless Sensor Networks: From Theory to Applications* supplies comprehensive coverage of WSNs.

**Mastering Physics for IIT-JEE Volume - II** Rathi Rakesh, Physics for IIT-JEE

**Entrepreneurship, Innovation and Sustainability** Marcus Wagner, 2017-09-08 This book addresses the intersection of entrepreneurship, innovation and sustainability (EIS), presenting high-quality research illuminating the relationship between the three fields. The EIS nexus is particularly relevant from a European point of view given the focus of the European Commission on corporate social responsibility (CSR) and sustainability, as well as their prominent role within the European Union in general. Also, the rapid economic growth witnessed especially in the BRIC countries in recent years requires that firms reconcile sustainability aspects with profitability and innovation, and entrepreneurs are seen as key diffusers of these aims. Sustainability requires both radical and incremental innovation at many different levels (technology, product, process, system). In many cases, such innovations come from small and medium-sized enterprises and so the role of the entrepreneur is key to their success. The book is split into six sections. The first section examines the nexus

in detail focusing on system-oriented connectivity between sustainability, innovation and entrepreneurship. The second section looks at how to nurture corporate entrepreneurship for sustainability; and the third considers mature industries such as automotives, chemicals and electronics and how sustainability aspects can be integrated into innovation process and strategy. The fourth section examines the nexus through the lens of developing countries in Africa. Sustainable entrepreneurship is identified as a hugely beneficial way to foster development. The fifth section of the book concentrates on SMEs; and finally the EIS nexus is approached from a network perspective and focuses on inter-organisational partnerships, which are often an important facilitator or spark for EIS initiatives. This book will prove to be essential for researchers in the EIS nexus and be of invaluable help to practitioners, governments and inter-governmental bodies attempting to encourage sustainable entrepreneurship and innovation.
