**DIY Satellite Platforms** Sandy Antunes, 2012-01-30 Want to build your own satellite and launch it into space? It's easier than you may think. The first in a series of four books, this do-it-yourself guide shows you the essential steps needed to design a base picosatellite platform—complete with a solar-powered computer-controlled assembly—tough enough to withstand a rocket launch and survive in orbit for three months. Whether you want to conduct scientific experiments, run engineering tests, or present an orbital art project, you'll select basic components such as an antenna, radio transmitter, solar cells, battery, power bus, processor, sensors, and an extremely small picosatellite chassis. This entertaining series takes you through the entire process—from planning to launch. Prototype and fabricate printed circuit boards to handle your payload Choose a prefab satellite kit, complete with solar cells, power system, and on-board computer Calculate your

power budget—how much you need vs. what the solar cells collect  
Select between the Arduino or BasicX-24 onboard processors, and  
determine how to use the radio transmitter and sensors Learn your  
launch options, including the providers and cost required Use  
milestones to keep your project schedule in motion

Astronomy For Dummies Stephen P. Maran, 2017-08-15 Your  
updated guide to exploring the night sky Do you know the  
difference between a red giant and a white dwarf? From asteroids  
to black holes, this easy-to-understand guide takes you on a grand  
tour of the universe. Featuring updated star maps, charts, and an  
insert with gorgeous full-color photographs, *Astronomy For  
Dummies* provides an easy-to-follow introduction to exploring the  
night sky. Plus, this new edition also comes with chapter quizzes  
online to help your understanding. For as long as people have  
been walking the earth, those people have looked up into the night  
sky and wondered about the nature of the cosmos. Without the  
benefit of science to provide answers, they relied on myth and  
superstition to help them make sense of what they saw. Lucky for  
us, we live at a time when regular folks, equipped with nothing  
more than their naked eyes, can look up into the night sky and  
gain admittance to infinite wonders. If you know what to look for,

you can make out planets, stars, galaxies, and even galactic clusters comprising hundreds of millions of stars and spanning millions of light-years. Whether you're an amateur astronomer, space enthusiast, or enrolled in a first year astronomy course, Astronomy For Dummies gives you a reason to look into the heavens. Includes updated schedules of coming eclipses of the Sun and Moon and a revised planetary appendix Covers recent discoveries in space, such as water on the Moon and Pluto's demotion from planet status Collects new websites, lists of telescope motels, sky-watching guides, and suggestions for beginner's telescopes and suppliers Provides free online access to chapter quizzes to help you understand the content Ever wonder what's out there in the big ol' universe? This is the book for you!

Giant Book of Preschool Activities, Grades PK - K ,2009-01-19

Help students in grades PK–K make connections and reinforce learning while keeping the classroom manageable using Giant Book of Preschool Activities. This 304-page book provides practice for the skills and functions needed for early childhood development. With more than 26 themes and 500 activities, this book makes it practically impossible to run out of ideas for teaching social, motor, memory, and auditory skills. The book includes ideas for

movement, rhyming, circles, counting, games, and centers and comes with reproducibles, literature selections, Web site suggestions, and an index of activities by skill. This book supports NAEYC standards and aligns with state, national, and Canadian provincial standards.

**A Guide to NASA's Earth Science Enterprise and the Earth Observing System, NP-1999-08-134-GSFC, 1999 EOS Reference Handbook ,1999**

Atmospheric Science at NASA Erik M. Conway, 2008-12-08

Honorable Mention, 2008 ASLI Choice Awards. Atmospheric Science Librarians International This book offers an informed and revealing account of NASA's involvement in the scientific understanding of the Earth's atmosphere. Since the nineteenth century, scientists have attempted to understand the complex processes of the Earth's atmosphere and the weather created within it. This effort has evolved with the development of new technologies—from the first instrument-equipped weather balloons to multibillion-dollar meteorological satellite and planetary science programs. Erik M. Conway chronicles the history of atmospheric

science at NASA, tracing the story from its beginnings in 1958, the International Geophysical Year, through to the present, focusing on NASA's programs and research in meteorology, stratospheric ozone depletion, and planetary climates and global warming. But the story is not only a scientific one. NASA's researchers operated within an often politically contentious environment. Although environmental issues garnered strong public and political support in the 1970s, the following decades saw increased opposition to environmentalism as a threat to free market capitalism. Atmospheric Science at NASA critically examines this politically controversial science, dissecting the often convoluted roles, motives, and relationships of the various institutional actors involved—among them NASA, congressional appropriation committees, government weather and climate bureaus, and the military.

Astronomy For Dummies Stephen P. Maran, Richard Tresch Fienberg, 2023-06-13 Embark on your own personal journey into the night sky. Stardate: Today! Ever catch yourself staring up at the night sky and wondering just what the heck is out there? While no one book can answer all your questions, *Astronomy For Dummies* will take you on a tour through the Milky Way (and

beyond!) that describes some of the most fascinating objects in the universe. This book comes complete with online access to chapter quizzes and downloadable full-color astronomical photos of our universe, as well as easy-to-follow explanations of the eye-popping wonders and gorgeous interstellar objects that populate our solar system, galaxy, and universe. You'll find: Brand-new star charts for the northern and southern hemispheres, as well as descriptions of the latest tech tools for amateur astronomers Lists of the most recently discovered exoplanets, exomoons, and exocomets hurtling through the cosmos The latest timelines for dazzling solar events and maps to the best places to see them live and in-person Filled with discussions of the biggest and greatest new breakthroughs and an 8-page color insert packed with unbelievable, full-color photographs, *Astronomy For Dummies* is a can't-miss book that will ignite a passion for understanding the mysteries of the universe in children and adults alike!

Global Atmospheric-Biospheric Chemistry Ronald G.

Prinn,2012-12-06 This volume contains the invited papers and a transcript of the final panel discussion in the First Scientific Conference of the International Global Atmospheric Chemistry (IGAC) Project, held in Eilat, Israel from April 18-22, 1993. The conference was hosted by the Israeli Institute for Biological Research (IIBR) and was the 37th in the prestigious OHOLO Conference series in Israel. The conference was devoted to the subject of Global Atmospheric-Biospheric Chemistry and was a

landmark event in this area. It provided the first comprehensive report of progress under IGAC toward improving our understanding of the chemical and biological processes that determine the changing composition of the earth's atmosphere. This work is an essential component of the comprehensive International Geosphere Biosphere Program (IGBP) devoted to measuring and understanding global changes in the past and present, and predicting the future evolution of our planet. I want to devote this brief foreword to thanking several people who worked especially hard to make the conference a success and who helped to produce this volume as a record of the event. Paul Crutzen, Amram Golombek, Pamela Matson and Henning Rodhe did sterling service on the conference organizing committee. Special thanks go to Amram Golombek and Dr. Cohen, the Director of IIBR, who hosted the event in Israel. Anne Slinn did an excellent job in producing the Abstract book and helping with administrative matters. Alex Pszenny helped capably to critically review the Abstracts.

**Predator** Richard Whittle, 2014-09-16 The untold story of the birth of the Predator drone, a wonder weapon that transformed the American military, reshaped modern warfare, and sparked a revolution in aviation The creation of the first weapon in history whose operators can stalk and kill an enemy on the other side of the globe was far more than clever engineering. As Richard Whittle shows in *Predator*, it was one of the most profound developments in the history of military and aerospace technology. Once considered fragile toys, drones were long thought to be of limited utility. The Predator itself was resisted at nearly every turn by the military establishment, but a few iconoclasts refused to see this new technology smothered at birth. The remarkable cast of characters responsible for developing the Predator includes a former Israeli inventor who turned his Los Angeles garage into a drone laboratory, two billionaire brothers marketing a futuristic weapon to help combat Communism, a pair of fighter pilots willing to buck their white-scarf fraternity, a cunning Pentagon operator nicknamed Snake, and a secretive Air Force organization known as Big Safari. When an Air Force team unleashed the first lethal drone strikes in 2001 for the CIA, the military's view of drones changed nearly overnight. Based on five years of research and hundreds of

interviews, Predator reveals the dramatic inside story of the creation of a revolutionary weapon that forever changed the way we wage war and opened the door to a new age in aviation.

*Kidnapped on Safari* Peter Riva, 2023-09-05 A filmmaker's search for a kidnapped safari guide pulls him into a massive terrorist plot in this action-packed, international thriller. Film producer Pero Baltazar's last job has him filming on Kenya's Lake Rudolf for a television nature show with the help of his friend, Mbuno, an expert tracker and safari guide. But their idyllic escape is soon spoiled by terrifying news: Mbuno's nephew has been kidnapped while leading a safari five hundred miles away in Tanzania. As they begin their search, they find a trail of clues that leads to a shocking discovery. The kidnappers have ties to an illegal logging operation run by sinister mercenaries from Boko Haram. They pose an even bigger threat than just human trafficking and deforestation. Rescuing Mbuno's nephew will not only risk their lives but also the political stability of the entire region
