International Financial Statistics, February 2015 International Monetary Fund. Statistics Dept., 2015-01-30 This monthly issue of International Financial Statistics (IFS) is a standard source of statistics on all aspects of international and domestic finance. Information is presented in tables for specific countries and in tables for area and world aggregates. Quarterly issues of this publication provide, for 160 countries, tables with current data (or estimates) on the value of imports from and exports to their most important trading partners. In addition, similar summary tables for the world, industrial countries, and developing countries are included. The yearbook provides, for the most recent seven years, detailed trade data by country for approximately 184 countries, the world, and major areas. This annual publication provides detailed data on transactions in revenue, expense, net acquisition of assets and liabilities, other economic flows, and balances of assets and liabilities of general government and its subsectors. The data are compiled according to the framework of the 2001 Government

Finance Statistics Manual, which provides for several summary measures of government fiscal performance. In IFS, exchange rates are expressed in time series of national currency units per SDR and national currency units per US dollar, or vice versa.

balance of payments, net International Investment Position (IIP), and total financial assets and total liabilities for the IIP. The second section provides detailed tables on balance-of-payments statistics for 189 economies and IIP data for 143 economies. IFS, Balance-of-Payments Statistics, Direction of Trade Statistics, and Government Finance Statistics are available on CD-ROM by annual subscription. The CD-ROMs incorporate a Windows-based browser facility, as well as a flat file of the database in scientific notation. The Statistics Department of the IMF is pleased to make available to users the IFS, Balance-of-Payments Statistics, Direction of Trade Statistics, and Government Finance Statistics databases through the new, easy-to-use data.IMF.org online service. New features include Data Portals, which provide quick access to predefined tables, maps, graphs, and charts aimed at visualizing many common data searches.

Exchange rates in IFS are classified into three broad categories, reflecting the role of the authorities in determining the rates and/or the multiplicity of the exchange rates in a country. The three categories are the market rate, describing an exchange rate determined largely by market forces; the official rate, describing an exchange rate determined by the authorities—sometimes in a flexible manner; and the principal, secondary, or tertiary rate, for countries maintaining multiple exchange arrangements.
