Impact of Mobile Services on Business Development and E-Commerce Liébana, Francisco,Kalini?, Zoran,Luna, Iviane Ramos de,Rodríguez-

Ardura, Inma,2019-09-27 Mobile devices have become an essential item in the daily lives of many people. As with any innovation, mobile services present both opportunities and challenges to current business models. The development of mobile communication coupled with evolving mobile services have completely changed the business landscape and have transformed consumer behavior. It is important to understand the impact that these services have on users' lives, business, and society. Impact of Mobile Services on Business Development and E-Commerce is a collection of innovative research that focuses on the importance of mobile services in business development and discusses the provision of decentralized services, mobile commerce and marketing, and new models for the delivery of mobile services such as business-to-consumer and peer-to-peer. While highlighting topics including global market, consumer behavior, and customer satisfaction, this book is ideally designed for business managers, executives, marketers, entrepreneurs, financial advisors, consumer behavior analysts, computer engineers, software developers, IT specialists, students, researchers, and business professionals.

Japanese Telecommunications Ruth Taplin,Masako Wakui,2006-02-01 Presenting a comprehensive survey of the telecommunications industry in Japan, Taplin and Wakui cover the different sectors of the industry – including mobile, broadband and satellite, whilst considering key questions such as the structure and economics of the industry, government policy, and international relations issues connected to the industry. The volume brings together unique analysis by renowned experts in the telecommunications field. One major overall problem is that, unlike many other industries, Japan has lagged behind other countries in telecommunications. Japanese Telecommunications considers why this should be so, showing how far this is attributable to an unmodernized industry structure, and assessing the measures being taken to address the problem. After over a decade of struggle, Japan has recorded rapid uptake of broadband, and Japanese advanced mobile services have become increasingly successful on a global scale. Japan has also undergone regulatory reform, and competition policy is now given top priority by government. Taplin and Wakui examine the most recent developments and provide signposts for the future.

The Mobile Commerce Revolution Tim Hayden,Tom Webster,2014-10 Explains how mobile commerce has transformed consumer behavior and the competitive culture, and offers business strategies for profiting in this environment.

ECKM 2018 19th European Conference on Knowledge Management Ettore Bolisani,Eleonora Di Maria,Enrico Scarso,2018-09-06

Mobilized S. C. Moatti,2016-05-02 That person slumped over her cell phone is disengaged, isolated, lost in her own little world, right? Wrong, says SC Moatti. She's highly engaged - she's having a text conversation with a friend in Europe, playing a game with another, and looking for a good place to go to dinner with a third. Mobile technology has become such an integral part of how we interact that for many people losing a cell phone is like losing a limb. And the most successful mobile apps that are precisely those that enhance and multiply the frequency and power of our real - world interactions. Moatti - a technologist and industry insider - says these kinds of mobile apps adhere to three universal principles: they must have a simple design, enable the user to personalize them, and be continually improved by their makers through relentless attention to analytics. She uses examples from a host of great mobile app creators - Facebook, Yelp, Lyft, Tinder, Aerbnb, Trulia, WhatsApp, and more - to demonstrate how it's done. Even as technology evolves and smartphones are replaced by smaller mobile devices such as watches and contact lenses, these three principles will remain evergreen. The market is full of how - to books for creating apps, but no works examine what qualities make for great mobile products. Until now.

Unfinished Business Gary Clyde Hufbauer,Erika Wada,1997 In February 1997, 69 countries accounting for 95 percent of world telecommunications traffic agreed to open their basic telecommunications service markets. In April 1997, 28 countries accounting for 80 percent of world trade in information technology (IT) goods agreed to eliminate tariffs on IT goods by January 2000. These two agreements represent significant steps toward global telecommunication liberalization. The agreements also mark the beginning of new battles that will determine the extent of competition and reform in the telecommunications industry in the 21st century. Although implementation of the two pacts will be phased in over several years, some signatory countries are already facing a backlash from local telecommunications companies and equipment suppliers. Hence the issue remains highly contentious around the world. In this volume, leading scholars from different countries offer their assessments of the two new agreements. They also predict the evolution of the telecommunications industry in the years ahead. The volume provides essential background on future developments in this dynamic and crucial sector, and suggests ways in which it can be shaped to provide maximum benefits for the world economy.
