Nondestructive Characterization of Materials II Jean F. Bussière,Jean-Pierre Monchalain,Clayton O. Ruud,Robert E. Green,2013-03-14 The possibility of nondestructively characterizing the microstructure, morphology or mechanical properties of materials is certainly a fascinating subject. In principle, such techniques can be used at all stages of a material's life - from the early stages of processing, to the end of a structural component's useful life. Interest in the subject thus arises not only from a purely scientific point of view but is also strongly motivated by economic pressures to improve productivity and quality in manufacturing, to insure the reliability and extend the life of existing structures. The present volume represents the edited papers presented at the Second International Symposium on the Nondestructive Characterization of Materials, held in Montreal, Canada, July 21-23, 1986. The Proceedings are divided into eight sections, which reflect the multidisciplinary nature of characterizing materials nondestructively: Polymers and Composites, Ceramics and Powder Metallurgy, Metals, Layered Structures/Adhesive Bonds/Welding, Degradation/Aging, Texture/ Anisotropy, Stress, and New Techniques. Invited papers by R. Hadcock of Grumman Aircraft Systems, R. Cannon of Rutgers University, H. Yada of Nippon Steel and R. Bridenbaugh of Alcoa review respectively the processing of polymer matrix composites, ceramics, steel and aluminum, emphasizing the need for material property sensors to improve process and quality control. Two other invited papers, one by A. Wedgwood of Harwell and the other by P. Holler of the IZFP in Saarbrücken review state of the art techniques to characterize particulate matter and metals respectively.

The Art of Strategy Sun Tzu, John Boyd, Simon Wardley, Erik Schön, 2020-04-05 What is strategy? Why do you need it? How do you do it? The Art Of Strategy provides timeless answers to these eternal questions. It is a short introduction to strategy through the insights of three successful strategists: Sun Tzu, John Boyd and Simon Wardley. It is a modern reading of Sun Tzu's The Art of War -- the strategy classic written in China around 500 BC -- using the lenses of Boyd (OODA loop inventor) and Wardley (Wardley Map inventor). Each chapter gently transforms The Art of War into a modern business setting and includes material from Boyd and Wardley in separate sections to complement and clarify Sun Tzu's terse, poetic text. The idea is to serve strategy in 13 short chapters requiring 5-10 minutes reading time each. Additionally, an extensive glossary is provided since many Chinese concepts are purposefully abstract and ambiguous. As a positive side effect, it may also provide an improved understanding of the (geo)political gameplays by Boris Johnson, Donald Trump, Vladimir Putin and Xi Jinping who are all inspired by Sun Tzu. The Art of Strategy is condensed knowledge that all managers, agile coaches and other leaders should have. This is three thinkers from very different contexts. But as Erik has put it, with similarities and differences topic by topic, a fourth voice appears. That voice belongs to the interaction between the three narrators and it gives as much value to me as a reader as the other three voices do. Staffan Nöteberg, author of Monotasking Erik Schön is an executive, strategist and keynote speaker who has successfully developed and deployed strategy for more than 20 years in small, medium and larger enterprises.

Suicide Gene Therapy Caroline J. Springer, 2008-02-01 Gene therapy has expanded rapidly over the last decade. The number of clinical trials reported by 2001 included 532 protocols and 3436 patients. Phase I trials predominate with 359 trials of 1774 patients versus Phase II (57 trials with 507 patients) and Phase III (3 trials of 251 patients). The disease overwhelmingly targeted by gene therapy is cancer: involving 331 trials with 2361 patients. Despite the somewhat disappointing results of clinical trials to date, gene therapy offers tremendous promise for the future of cancer therapy. The area of gene therapy is vast, and both malignant and nonmalignant cells can be targeted. Suicide Gene Therapy: Methods and Reviews covers gene therapy that targets malignant cells in a treatment that has become known as "suicide gene therapy." Basically, this approach uses the transduction of cancer cells with a gene for a foreign enzyme that, when expressed, is able to activate a nontoxic prodrug into a highly cytotoxic drug able to kill the cancer cell population. This is a major area in cancer gene therapy—in 2001 this technique was represented by 52 clinical protocols with a total of 567 patients. Additional trials used multiple gene therapy protocols that also involved suicide gene therapy (83 with 497 patients), indicating that the interest in this area is considerable. Suicide Gene Therapy: Methods and Reviews aims to cover comprehensively, both in theoretical and practical terms, the rapidly evolving area of suicide gene therapy for cancer.
