Readers look at human emotion through the lens of the neuroscientist and follow all the brain functions and processes that help us feel our feelings. The Emotional Brain Dean Burnett,2023-05-09 Happy, sad, angry, glad—why do we cry when we're ecstatic or mad? A fascinating look at the science of emotion Emotions can be a pain. After his father died of Covid, Dean Burnett found himself wondering what it would be like to live without emotion. And so, he decided to put his feelings under the microscope—for science. With his trademark humour, Burnett takes us on an incredible journey of discovery, stretching from the origins of life to the ends of the universe. Along the way, he reveals why we would ever follow our gut; whether things

really were better in the old days; why it's so hard to stop doomscrolling; how sad music can make us happier; why we can't think straight when hungry; the point of nightmares; and why it is virtually impossible to forget embarrassing memories.

Emotions in the Digital World Robin L. Nabi, Jessica Gall Myrick, 2023-08-08 This edited volume examines the ways in which rapidly changing technologies and patterns of media use influence, and are influenced by, our emotional experiences. Following introductory chapters outlining common conceptual frameworks used in the study of emotion and digital media effects, this book is then organized around four general areas highlighting the intersection of technology use and emotional experience: how people experience, and researchers measure, emotions in response to digital media use; potential emotional harms and enrichments resulting from online behaviors; the socio-emotional dynamics of online interaction; and emotion's role in engagement with online information. Chapters span a wide range of topics, including physiological and neuroscientific responses to new media, virtual reality, social media and well-being, technology addiction, cyberbullying, online hate and empathy, online romantic relationships, self-presentation online, information seeking, message sharing, social support, polarization, misinformation, and more. Through a social scientific lens, contributing authors provide nuanced, interdisciplinary perspectives on these salient social phenomena, offering cogent reviews and critiques of the literatures and avenues for future research. In essence, this volume highlights the centrality of emotions in understanding how ever-present media technologies influence our lived experiences.

The Neuroscience of Emotion Ralph Adolphs, David J. Anderson, 2018-06-05 A new framework for the neuroscientific study of emotions in humans and animals The Neuroscience of Emotion presents a new framework for the neuroscientific study of emotion across species. Written by Ralph Adolphs and David J. Anderson, two leading authorities on the study of emotion, this accessible and original book recasts the discipline and demonstrates that in order to understand emotion, we need to examine its biological roots in humans and animals. Only through a comparative approach that encompasses work at the molecular, cellular, systems, and cognitive levels will we be able to comprehend what emotions do, how they evolved, how the brain shapes their development, and even how we might engineer them into robots in the future. Showing that emotions are ubiquitous across species and implemented in specific brain circuits, Adolphs and Anderson offer a broad foundation for thinking about emotions as evolved, functionally defined biological states. The authors discuss the techniques and findings from modern neuroscientific investigations of emotion and conclude with a survey of theories and future

research directions. Featuring color illustrations throughout, *The Neuroscience of Emotion* synthesizes the latest in neuroscientific work to provide deeper insights into how emotions function in all of us.

The Emotions Rom Harré, W Gerrod Parrott, 1996-06-27 `There is much that is fascinating here. Long-established experiments and conclusions are rubbished and reinterpreted, long-established assumptions and beliefs about emotions are soundly trounced, and generally a good going-over is delivered to the whole field... it is such a blockbuster that one can only reel backwards and tell anyone studying the subject that they would be crazy not to get it! - Self & Society This fascinating book overviews the psychology of the emotions in its broadest sense, tracing historical, social, cultural and biological themes and analyses. The contributors - some of the leading figures in the field - produce a new theoretical synthesis by drawing together these strands. From the standpoint of the function of the emotions in everyday life, the authors focus on: the discursive role played by the emotions in expressing judgements about, attitudes to and contrition for actions done by the self and others, and how certain emotions - such as guilt, shame, embarrassment, chagrin and regret - seem to play a role in social control; the variation and diversity in emotion, which provides scope for exploring how patterns of emotion contrast in different societies, across gender lines, at different historical times, and between children and adults; and the way in which the body is shaped and its functions influenced by culturally maintained patterns of emotion displays.

Animals, Machines, and AI Erika Quinn, Holly Yanacek, 2021-11-08 Sentient animals, machines, and robots abound in German literature and culture, but there has been surprisingly limited scholarship on non-human life forms in German studies. This volume extends interdisciplinary research in emotion studies to examine non-humans and the affective relationships between humans and non-humans in modern German cultural history. In recent years, fascination with emotions, developments in robotics, and the burgeoning of animal studies in and beyond the academy have given rise to questions about the nature of humanity. Using sources from the life sciences, literature, visual art, poetry, philosophy, and photography, this collection interrogates not animal or machine emotions per se, but rather uses animals and machines as lenses through which to investigate human emotions and the affective entanglements between humans and non-humans. The COVID-19 pandemic made us more keenly aware of the importance of both animals and new technologies in our daily lives, and this volume ultimately sheds light on the centrality of non-humans in the human emotional world and the possibilities that relationships with non-humans offer for enriching that world.

Joy, Guilt, Anger, Love Giovanni Frazzetto, 2014-02-25 “Neuroscientist Giovanni Frazzetto enters the restless realm of human emotion through the portals of physiology, genetics, history, art and philosophy. Anger, guilt, anxiety, grief, empathy, joy and love are anatomized in turn, enlivened with research on everything from the role of monoamine oxidase A in anger to the engagement of opioid receptors as we thrill to music. And who knew that surrealist Salvador Dali created an art installation in the shape of a giant caterpillar to explore the process of sedation?” —Nature Is science ever enough to explain why we feel the way we feel? In this engaging account, renowned neuroscientist Giovanni Frazzetto blends cutting-edge scientific research with personal stories to reveal how our brains generate our emotions. He demonstrates that while modern science has expanded our knowledge, investigating art, literature, and philosophy is equally crucial to unraveling the brain’s secrets. What can a brain scan, or our reaction to a Caravaggio painting, reveal about the deep seat of guilt? Can ancient remedies fight sadness more effectively than antidepressants? What can writing poetry tell us about how joy works? Structured in seven chapters encompassing common human emotions—anger, guilt, anxiety, grief, empathy, joy, and love—*Joy, Guilt, Anger, Love* offers a way of thinking about science and art that will help us to more fully understand ourselves and how we feel.

How We Feel Giovanni Frazzetto, 2013 What can a brain scan, or our reaction to a Caravaggio painting, reveal about the deep seat of guilt? How can reading Heidegger, or conducting experiments on rats, help us to cope with anxiety in the face of the world's economic crisis? Can ancient remedies fight sadness more effectively than anti-depressants? What does the neuroscience of acting tell us about how we feel empathy, and fall for an actor on stage? What can writing poetry tell us about how joy works? And how can a bizarre neurological syndrome or a Shakespearean sonnet explain love and intimacy? We live at a time when neuroscience is unlocking the secrets of our emotions. But is science ever enough to explain why we feel the way we feel? Giovanni Frazzetto takes us on a journey through our everyday lives and most common emotions. In each chapter, his scientific knowledge mixes with personal experience to offer a compelling account of the continual contrast between rationality and sentiment, science and poetry. And he shows us that by facing this contrast, we can more fully understand ourselves and how we feel.

Emotions Monica Greco, Paul Stenner, 2013-10-31 Are emotions becoming more conspicuous in contemporary life? Are the social sciences undergoing an 'affective turn'? This Reader gathers influential and contemporary work in the study of emotion and affective life from across the range of the social sciences. Drawing on both theoretical and empirical research, the collection offers a sense

of the diversity of perspectives that have emerged over the last thirty years from a variety of intellectual traditions. Its wide span and trans-disciplinary character is designed to capture the increasing significance of the study of affect and emotion for the social sciences, and to give a sense of how this is played out in the context of specific areas of interest. The volume is divided into four main parts: universals and particulars of affect embodying affect political economies of affect affect, power and justice. Each main part comprises three sections dedicated to substantive themes, including emotions, history and civilization; emotions and culture; emotions selfhood and identity; emotions and the media; emotions and politics; emotions, space and place, with a final section dedicated to themes of compassion, hate and terror. Each of the twelve sections begins with an editorial introduction that contextualizes the readings and highlights points of comparison across the volume. Cross-national in content, the collection provides an introduction to the key debates, concepts and modes of approach that have been developed by social scientist for the study of emotion and affective life.

What is Emotion? Daniel and Amy Starch Research Professor of Psychology Emeritus Jerome Kagan, Jerome Kagan, 2007-01-01 In this sophisticated overview of human emotions, a widely respected psychologist and author addresses the ambiguities and embraces the controversies that surround this intriguing subject. An insightful and lucid thinker, Jerome Kagan examines what exactly we do know about emotions, which popular assumptions about emotions are incorrect, and how scientific study must proceed if we are to uncover the answers to persistent and evasive questions about emotions. Integrating the findings of anthropological, psychological, and biological studies in his wide-ranging discussion, Kagan explores the evidence for great variation in the frequency and intensity of emotion among different cultures. He also discusses variations among individuals within the same culture and the influences of gender, class, ethnicity, and temperament on a person's emotional patina. In his closing chapter, the author proposes that three sources of evidence - verbal descriptions of feelings, behaviours, and measures of brain states - provide legitimate but different definitions of emotion. Translating data from one of these sources to another may not be possible, Kagan warns, and those who study emotions must accept, at least for now, that their understanding is limited to and by the domain of their information

Feelings and Emotions Antony S. R. Manstead, Nico Frijda, Agneta Fischer, 2004-04-05 Publisher Description

Functional Accounts of Emotion James J. Gross, Dacher Keltner, 1999 In recent years, emotion researchers have paid increasing attention to the functions that emotions service. This attention to function has been apparent in many disciplines and at many levels of analysis. From the most basic physiological symptom to the most overarching social structure, the effects of emotion, both on the emotional person and on others, are being recognized. The knowledge that has accumulated is substantial but is scattered among a variety of fields and literatures. This special issue summarizes the functional approach to emotion. The six articles that have been selected concentrate on the work of psychologists but include many of the other fields that have contributed to what is truly a multidisciplinary approach. The special issue opens with three foundational articles that discuss (a) the intrapersonal functions of emotions, (b) the social functions of emotions, and (c) the developmental functions of emotions. The next three articles focus on challenges to traditional functional accounts of emotions. These articles consider (d) emotion regulation, (e) emotions and psychopathology, and (e) negative affect and health.

The Development of Emotional Competence Carolyn Saarni, 1999-03-20 Synthesizing the latest research and theory with compelling narratives and case vignettes, this book explores the development of emotional competence in school-age children and young adolescents. Saarni examines the

formation of eight key emotional skills in relation to processes of self-understanding, socialization, and cognitive growth. The cultural and gender context of emotional experience is emphasized, and the role of moral disposition and other individual differences is considered. Tracing the connections between emotional competence, interpersonal relationships, and resilience in the face of stress, the book also explores why and what happens when development is delayed.

The Origin and Nature of the Emotions George Washington Crile, 1915

Expression of emotion in music and vocal communication Anjali Bhatara, Petri Laukka, Daniel J.

Levitin, 2014-08-18 Two of the most important social skills in humans are the ability to determine the moods of those around us, and to use this to guide our behavior. To accomplish this, we make use of numerous cues. Among the most important are vocal cues from both speech and non-speech sounds. Music is also a reliable method for communicating emotion. It is often present in social situations and can serve to unify a group's mood for ceremonial purposes (funerals, weddings) or general social interactions. Scientists and philosophers have speculated on the origins of music and language, and the possible common bases of emotional expression through music, speech and other vocalizations. They have found increasing evidence of commonalities among them. However, the domains in which researchers investigate these topics do not always overlap or share a common language, so communication between disciplines has been limited. The aim of this Research Topic is to bring together research across multiple disciplines related to the production and perception of emotional cues in music, speech, and non-verbal vocalizations. This includes natural sounds produced by human and non-human primates as well as synthesized sounds. Research methodology includes survey, behavioral, and neuroimaging techniques investigating adults as well as developmental populations, including those with atypical development. Studies using laboratory tasks as well as studies in more naturalistic settings are included.
