Guide to Assessment Scales in Parkinson's Disease Pablo Martinez-Martin,Carmen Rodriguez-Blazquez,Maria João Forjaz,Kallol Ray

Chaudhuri,2014-10-16 This Guide assesses the key clinimetric attributes in the assessment of Parkinson's Disease (PD), with the intention to offer rapid and pragmatic information on the most relevant scales used in PD. Parkinson's disease affects approximately 4 million people globally and is most commonly seen in people over the age of 50. The disease is a progressive disorder of the nervous system, and presents a number of movement and cognitive symptoms, thereby greatly affecting a patients quality of life. The use of scales for assessment in neurological disorders such as PD arises from the need to quantify disorders and states (such constructs as disability, symptoms, quality of life). Assessment scales are often categorised into two categories: generic (i.e. those scales usable in any health condition), and specific (i.e. scales developed for exclusive use in PD). They can have a variety of components: single-item and multi-item or composite scale; unidimensional and multidimensional; and as disease-centered and patient-centered measures. The creation and validation of scales is complex, with scales undergoing numerous studies to assess criteria such as acceptability, reliability, and responsiveness. In the process of validation of a scale the following attributes should be tested to ascertain whether a scale is an effective instrument of measurement.

Who Rules South Africa? Martin Plaut,Paul Holden,2012-06-14 In this timely work, WHO RULES SOUTH AFRICA?, highly regarded authors Paul Holden and Martin Plaut analyse the political elites that battle daily for power in South Africa. They argue that power does not reside in traditional institutions such as Parliament or even the Cabinet. Rather, power lies within the ANC-led Alliance which, with no founding document and no written constitution, is an unstructured and mutable political hydra with business and criminal elements in close attendance. It is the interaction between these forces which is the real story behind post-apartheid South Africa. In a country where poverty is rampant and institutions are weak, the

battle for power is set to intensify. The authors unravel the mystery of how the rainbow nation has reached such a pass. What are the origins of the Alliance, and will it survive the current power struggles? Who are the shadowy forces that operate within or alongside the Alliance? Most importantly, they seek to answer the burning question of whether South Africa is destined to become another African tragedy, or whether there is still the promise of growth and a stable democracy.

Mandela Martin Meredith, 2010-04-01 Nelson Mandela stands out as one of the most admired political figures of the twentieth century. It was his leadership and moral courage above all that helped to deliver a peaceful end to apartheid in South Africa after years of racial division and violence and to establish a fledgling democracy there. Martin Meredith's vivid portrayal of this towering leader was originally acclaimed by the Sunday Times as 'a fitting epitaph to an extraordinary career' and by the Daily Telegraph as 'a compelling account of the whole of Mandela's life'. Meredith's acclaimed biography incorporates a decade of additional perspective and hindsight on the man and his legacy and examines how far his hopes for the new South Africa were realised. Mandelais the most thorough and up-to-date account available of the life of its most revered hero.

Rating Scales in Parkinson's Disease Cristina Sampaio, Christopher G. Goetz, Anette Schrag, 2012-05-01 For many years, the need to develop valid tools to evaluate signs and symptoms of Parkinson Disease (PD) has been present. However the understanding of all intricacies of rating scales development was not widely available and the first attempts were relatively crude. In 2002, the Movement Disorders Society created a task force to systemize the measurement of Parkinson's Disease. Since then, the Task Force has produced and published several critiques to the available rating scales addressing both motor and non-motor domains of Parkinson Disease. Additionally the task force initiated a project to develop a new version of the UPDRS, the MDS-UPDRS. But none of this was made available in one convenient source. Until now. Rating Scales in Parkinson's Disease: Clinical Practice and Research is written for researchers from the medical and social sciences, and for health professionals wishing to evaluate the progress of their patients suffering from Parkinson's Disease. The book is both exhaustive in the description of the scales and informative on the advantages and limitations of each scale. As such, the text clearly guides readers on how to choose and use the instruments available. Extensive cross-referenced tables and charts closely integrate the parts of the book to facilitate readers in moving from one symptom domain to another.
