Computer Graphics from Scratch Gabriel Gambetta,2021-05-18 Computer Graphics from Scratch demystifies the algorithms used in modern graphics software and guides beginners through building photorealistic 3D renders. Computer graphics programming books are often math-heavy and intimidating for newcomers. Not this one. Computer Graphics from Scratch takes a simpler approach by keeping the math to a minimum and focusing on only one aspect of computer graphics, 3D rendering. You'll build two complete, fully functional renderers: a raytracer, which simulates rays of light as they bounce off objects, and a rasterizer, which converts 3D models into 2D pixels. As you progress you'll learn how to create realistic reflections and shadows, and how to render a scene from any point of view. Pseudocode examples throughout make it easy to write your renderers in any language, and links to live JavaScript demos of each algorithm invite you to explore further on your own. Learn how to: Use perspective projection to draw 3D objects on a 2D plane Simulate the way rays of light interact with surfaces Add mirror-like reflections and cast shadows to objects Render a scene from any camera position using clipping planes Use flat, Gouraud, and Phong shading to mimic real surface lighting Paint texture details onto basic shapes to create realistic-looking objects Whether you're an aspiring graphics engineer or a novice programmer curious about how graphics algorithms work, Gabriel Gambetta's simple, clear explanations will quickly put computer graphics concepts and rendering techniques within your reach. All you need is basic coding knowledge and high school math. Computer Graphics from Scratch will cover the rest.

Scribbles and Ink Ethan Long,2023-07 Two artists, two styles, and one book that may not be big enough for the both of them. See, Ink (the mouse) likes things to be clean and precise. Scribbles (the cat) is the opposite. But while there should be plenty of room for each of them to make their art without getting in each others way, or on each others nerves, THEY CAN'T MANAGE THAT! And from there paint splatters, ink goops, pencils get broken and brushes go wild until... it's not a work of art, IT'S A MESS! Discovering that they are no longer having any fun, the duo tentatively tries to collaborate instead of clobber, and, thus, a disaster-piece becomes a masterpiece. With this much creative friction, will this disaster-piece ever become a masterpiece?

Scratch for 8-12 year olds: You Can Code and Draw in Scratch Seamus O'Neill, This book contains twenty four short projects in eBook or spiral-bound print format for children 8 - 12 years. They are grouped into pairs by colour to cover 12 Sessions. Each is a draw and code assignment in Scratch to foster creative thinking with graphical skills. Scratch +Ready-Steady-Code connects essential coding concepts with children's imaginations for them to create games, animations and stories almost without limitations. Seamus O'Neill's Ready-Steady-Code is all about the extra magic, creativity and fun that vector sprites and fine-line grids bring to Scratch. More than 85% of Scratch sprites are vectors. Only 15% are bitmaps. Vector sprites are graphical drawings consisting of lines and shapes with colour fills. Bitmaps consist of difficult pixels. Vectors are much more flexible and easier to use. They can be ungrouped into their basic shapes which you can easily manipulate, re-colour and re-shape into new sprites or new costumes. You can also draw your own sprites (when the sprite you need is not available in the library). The term 'paint' is used for bitmaps but 'draw' is more suitable for vectors. This book shows children how to turn a bug into a spider, a butterfly into a bee, a skating penguin into a musician and much more. The vector toolbox is shown down along the right hand side when you open the Paint Editor in Vector Mode. This is because the cat sprite is a vector image. If you're working on a bitmap image, you find the bitmap tools down along the left side. SCRATCH +Ready-Steady-Code empowers the adults to take up the challenge that comes with being a parent, mentor or educator of children in this age of technology. The cards address the adult's confidence and competence while also facilitating children to learn coding and graphical drawing at the same time. OK! Are you Ready? Are you Steady? Let's Code!
