Urban Insects and Arachnids William H. Robinson,2005-04-14 This account provides the first comprehensive coverage of the insect and other arthropod pests in the urban environment worldwide. Presented is a brief description, biology, and detailed information on the development, habits, and distribution of urban and public health pests. There are 570 illustrations to accompany some of the major pest species. The format is designed to serve as a ready-reference and to provide basic information on orders, families, and species. The species coverage is international and based on distribution in domestic and peridomestic habitats. The references are extensive and international, and cover key papers on species and groups. The introductory chapters overview the urban ecosystem and its key ecological components, and a review of the pests status and modern control strategies. The book will serve as a professional training manual, and handbook for the pest control professionals, regulatory officials, and urban entomologists. It is organized alphabetically throughout.

Insects David B. Rivers,2017-04-15 An introduction to the intriguing world of insects, from bullet ants to butterflies. Designed as an introduction to the intriguing world of insect biology, this book examines familiar entomological topics in nontraditional ways. Author David B. Rivers gives important concepts relatable context through a pop culture lens, and he covers subjects that are not typical for entomology textbooks, including the impact of insects on the human condition, the sex lives of insects, why insects are phat but not fat, forensic entomology, and the threats that some insects pose to humanity. Each chapter presents clear and concise key concepts, chapter reviews, review questions following Bloom's taxonomy of learning, web links to videos and other resources, and breakout boxes (called Fly Spots) that capture student interest with unique and entertaining facts related to entomology. Focusing on both traditional and cutting-edge aspects of insect biology and packed with extensive learning resources, *Insects* covers a wide range of topics suitable for life science majors, as well as non-science students, including: • the positive and negative influences of insects on everyday human life • insect abundance • insect classification (here presented in the context of social media) • insect feeding, communication, defense, and sex • how insects are responding to climate change • forensic entomology • how insects can be used as weapons of war • how insects relate to national security • why insects have wings • how to read pesticide labels

Collection and Preservation of Insects and Other Material for Use in the Study of Agriculture Charles Homer Lane, Anna Barrows, Ernest Kelly, Harry Nelson Vinall, Orator Fuller Cook, Robert Macfarlane Chapin, Samuel Henry Ayers, Clarence Joseph Babcock, Nathan Banks, William Trimble Johnson, 1914 Teachers of nature study and of elementary agriculture are beginning to realize that if these subjects are to have a permanent place in the curriculum they must be something more than a study of book. In the attempt to make the work more practical, emphasis is being placed upon field practicums, observation trips, laboratory exercises and home projects. In connection with such practical work there is need for greater effort to stimulate interest in the recitation and a closer linking of the work of the classroom with the practical work. Inasmuch as a proper use of illustrative materials will do much toward arousing interest and making the subjects of nature study and agriculture more vital, the following pages give suggestions concerning the collection and preservation of insects and other material for use in rural schools. -- p.
