Context-Dependence in the Analysis of Linguistic Meaning Hans Kamp, Barbara Partee, 2021-10-01 This collection of papers addresses context-dependence and methods for dealing with it. The book also records comments to the papers and the authors' replies to the comments. In this way, the contributions themselves are contextually dependent. It represents an inquiry into the activities on the semantics side of the pragmatics boundary.

Foundations of Information and Knowledge Systems Thomas Eiter, Klaus-Dieter Schewe, 2003-07-31 This volume contains the papers presented at the "Second International Symposium on Foundations of Information and Knowledge Systems" (FoIKS 2002), which was held in Schloß Salza, Germany from February 20th to 23rd, 2002. FoIKS is a biennial event focusing on theoretical foundations of information and knowledge systems. It aims to bring together researchers working on the theoretical foundations of information and knowledge systems and to attract researchers working in mathematical fields such as discrete mathematics, combinatorics, logics, and

Finite model theory who are interested in applying their theories to research on database and knowledge base theory. FoIKS took up the tradition of the conference series “Mathematical Fundamentals of Database Systems” (MFDBS) which enabled East-West collaboration in the field of database theory. The first FoIKS symposium was held in Burg, Spreewald (Germany) in 2000. Former MFDBS conferences were held in Dresden (Germany) in 1987, Visegrád (Hungary) in 1989, and in Rostock (Germany) in 1991. Proceedings of these previous events were published by Springer-Verlag as volumes 305, 364, 495, and 1762 of the LNCS series. In addition the FoIKS symposium is intended to be a forum for intensive discussions. For this reason the time slot of long and short contributions is 60 and 30 minutes respectively, followed by 30 and 15 minutes for discussions, respectively. Furthermore, participants are asked in advance to prepare as correspondents to a contribution of another author. There are also special sessions for the presentation and discussion of open research problems.

Information Technology Risk Management in Enterprise Environments Jake Kouns, Daniel Minoli, 2011-10-04 Discusses all types of corporate risks and practical means of defending against them. Security is currently identified as a critical area of Information Technology management by a majority of government, commercial, and industrial organizations. Offers an effective risk management program, which is the most critical function of an information security program.

Nuclear Lattice Effective Field Theory Timo A. Lähde, Ulf-G. Meißner, 2019-05-07 This primer begins with a brief introduction to the main ideas underlying Effective Field Theory (EFT) and describes how nuclear forces are obtained from first principles by introducing a Euclidean space-time lattice for chiral EFT. It subsequently develops the related technical aspects by addressing the two-nucleon problem on the lattice and clarifying how it fixes the numerical values of the low-energy

constants of chiral EFT. In turn, the spherical wall method is introduced and used to show how improved lattice actions render higher-order corrections perturbative. The book also presents Monte Carlo algorithms used in actual calculations. In the last part of the book, the Euclidean time projection method is introduced and used to compute the ground-state properties of nuclei up to the mid-mass region. In this context, the construction of appropriate trial wave functions for the Euclidean time projection is discussed, as well as methods for determining the energies of the low-lying excitations and their spatial structure. In addition, the so-called adiabatic Hamiltonian, which allows nuclear reactions to be precisely calculated, is introduced using the example of alpha-alpha scattering. In closing, the book demonstrates how Nuclear Lattice EFT can be extended to studies of unphysical values of the fundamental parameters, using the triple-alpha process as a concrete example with implications for the anthropic view of the Universe. Nuclear Lattice Effective Field Theory offers a concise, self-contained, and introductory text suitable for self-study use by graduate students and newcomers to the field of modern computational techniques for atomic nuclei and nuclear reactions.

Foundations of Security Analysis and Design III Alessandro Aldini, Roberto Gorrieri, Fabio Martinelli, 2005-09-12 The increasing relevance of security to real-life applications, such as electronic commerce and Internet banking, is attested by the fast-growing number of - search groups, events, conferences, and summer schools that address the study of foundations for the analysis and the design of security aspects. The "International School on Foundations of Security Analysis and Design" (FOSAD, see <http://www.sti.uniurb.it/events/fosad/>) has been one of the foremost events - tablished with the goal of disseminating knowledge in this critical area, especially for young researchers approaching the field and graduate students coming from less-favoured and non-leading countries. The FOSAD school is held annually at the Residential Centre of Bertinoro (<http://www.ceub.it/>), in the fascinating setting of a former convent and episcopal fortress that has

been transformed into a modern conference facility with computing services and Internet access. Since the first school, in 2000, FOSAD has attracted more than 250 participants and 50 lecturers from all over the world. A collection of tutorial lectures from FOSAD 2000 was published in Springer's LNCS volume 2171. Some of the tutorials given at the two successive schools (FOSAD 2001 and 2002) are gathered in a second volume, LNCS 2946. To continue this tradition, the present volume collects a set of tutorials from the fourth FOSAD, held in 2004, and from FOSAD 2005.
