Spying with Maps Mark Monmonier, 2002-11-15 Maps, as we know, help us find our way around. But they're also powerful tools for someone hoping to find you. Widely available in electronic and paper formats, maps offer revealing insights into our movements and activities, even our likes and dislikes. In *Spying with Maps*, the mapmatician Mark Monmonier looks at the increased use of geographic data, satellite imagery, and location tracking across a wide range of fields such as military intelligence, law enforcement, market research, and traffic engineering. Could these diverse forms of geographic monitoring, he asks, lead to grave consequences for society? To assess this very real threat, he explains how geospatial technology works, what it can reveal, who uses it, and to what effect. Despite our apprehension about surveillance technology, *Spying with Maps* is not a jeremiad, crammed with dire warnings about eyes in the sky and invasive tracking. Monmonier's approach encompasses both skepticism and the acknowledgment that geospatial technology brings with it unprecedented benefits to governments, institutions, and individuals, especially in an era of asymmetric warfare and bioterrorism. Monmonier frames his explanations of what this new technology is and how it works with the question of whether locational privacy is a fundamental right. Does the right to be left alone include not letting Big Brother (or a legion of Little Brothers) know where we are or where we've been? What sacrifices must we make for homeland security and open government? With his usual wit and clarity, Monmonier offers readers an engaging, even-handed introduction to the dark side of the new technology that surrounds us—from traffic cameras and weather satellites to personal GPS devices and wireless communications.

A Field Guide to Roadside Technology Edwin J. C. Sobey, 2006 This fascinating handbook answers the questions of anyone who has ever wondered about the many strange devices found along the roadside, from utility poles to satellite dishes. More than 150 different roadside technologies are covered, and each detailed entry describes what the device does, how it works, and also includes a photograph for easy identification.

**the hAPPening** Vered Ehsani, 2021-12-15 Is life hAPPning without you? In a remote wasteland in Kenya, e-Trax has discovered a vast, near-surface deposit of a rare earth metal that's going to revolutionize energy-storing technology. Everything, from electricity to electric vehicles, is about to get cheaper, cleaner, and a whole lot more powerful. The discovery is going to improve the fortunes of humanity, and of e-Trax. There's only one problem: the deposit isn't in a wasteland. It's in a national park. Park ranger Moja has spent a lot of time and resources to escape her past and the sophisticated, online world of hAPPn, the largest social media app ever. But when she learns about the proposed mining project, she realizes that e-Trax is misleading hAPPn's 3.7 billion users in order to hide their destruction of the park. But she can't stop the megacorp alone. So she resurrects a dangerous ghost from her past to recruit Eva, hAPPn's Chief Growth Engineer, and Jamaal, an e-Trax geologist – neither of whom want to hear that the jobs they love are enabling the devastating environmental damage that their bosses are helping to cover up. Moja, Eva, and Jamaal will lose everything they love if they insist on pursuing the truth. Will they give up life in a perfect virtual world in order to protect the only reality that humanity

has left?

**The Digital City and Mediated Urban Ecologies** Kristin Scott, 2016-10-28 This book examines the phenomenon of the “digital city” in the US by looking at three case studies: New York City, San Antonio, and Seattle. Kristin Scott considers how digital technologies are increasingly built into the logic and organization of urban spaces and argues that while each city articulates ideals such as those of open democracy, civic engagement, efficient governance, and enhanced security, competing capitalist interests attached to many of these digital technological programs make the “digital city” problematic.

**Impact of Red Light Camera Enforcement on Crash Experience** Hugh W. McGee, Kimberly A. Eccles, National Cooperative Highway Research Program, 2003 At head of title: National Cooperative Highway Research Program.

The Return of Planet-X Jaysen Q. Rand, 2007 The Return of Planet-X is an educational, informational source examining all aspects of this controversial subject including the record of X's Ancient Science of Prophecy, its Phantom Astronomy, Forbidden Archaeology and the Signs Of Its Approach. This book examines the history and prophecy of Earth's many cultures throughout the millennia and their voluminous references to the reality of X's periodic passages. The most current hypothesis used to examine X's next return through the solar system centers around the fact that X's extended orbit (approximately every 3,600 years -- first passing through the solar system then back out again), suggests that its 'destructive cycle' occurs in two phases. The 'first phase' begins with X's initial pass-through in 2009 separated by three years until its 'second phase.' This passage marks X's return leg back into deep space beginning again its 3,600-year-long trek through the heavens. X's last return visit through the solar system most likely coincided with the Hebrew's exodus from Egypt estimated around 1447 BC -- roughly 3,459 years ago. Did God somehow come to Moses' aid by staging a cosmic event that no one today understands? The Mayan Celestial Calendar Codex inexplicably ends 21 December 2012. According to ancient Mayan cosmology, 'time' as we know it on Earth will reach its climax on that date. Written across the scroll of time and space, the author believes Planet-X will first return in 2009 and again in 2012.
