NIST SP 800-54 Border Gateway Protocol Security National Institute National Institute of Standards and Technology, 2007-07-04 This document introduces the Border Gateway Protocol (BGP), explains its importance to the Internet, and provides a set of best practices that can help in protecting BGP. Best practices described here are intended to be implementable on nearly all currently available BGP routers. While a number of enhanced protocols for BGP have been proposed, these generally require substantial changes to the protocol and may not interoperate with current BGP implementations. While the recommendations in this document can contribute to greatly improved BGP security, they are not a complete defense against all threats. Security administrators and decision makers should select and apply these methods based on their unique needs. Includes a list of applicable NIST, UFC, and MIL-HDBK cybersecurity publications for consideration. Why buy a book you can download for free? First you gotta find a good clean (legible) copy and make sure it's the latest version (not always easy). Some documents found on the web are missing some pages or the image quality is so poor, they are difficult to read. We look over each document carefully and replace poor quality images by going back to the original source document. We proof each document to make sure it's all there - including all changes. If you find a good copy, you could print it using a network printer you share with 100 other people (typically its either out of paper or toner). If it's just a 10-page document, no problem, but if it's 250-pages, you will need to punch 3 holes in all those pages and put it in a 3-ring binder. Takes at least an hour. It's much more cost-effective to just order the latest version from Amazon.com This book is published by 4th Watch Books and includes copyright material. We publish compact, tightly-bound, full-size books (8 1/2 by 11 inches), with glossy covers. 4th Watch Books is a Service Disabled Veteran-Owned Small Business (SDVOSB). Feasibility of Developing a Secure Gateway , 1992 The DoD Gateway Information System (DGIS) effort began in the early 1980s to provide a one-stop user-friendly access to many federal and commercial databases. The present effort is to determine the feasibility of developing an intelligent, secure gateway to classified databases, such as the Defense RDT & E Online System (DROLS), and the Air Force's CIRC database, in addition to unclassified databases, such as those already available with DGIS. A secure gateway consists (conceptually) of three major components: a secure operating system, telecommunications, and application software. This report presents the results of a study of the feasibility of developing a secure gateway. Three types of characteristics required for the secure gateway are discussed: functional, security, and technical characteristics. To provide assurance of the technical feasibility of a secure gateway, trusted computing base (TCB) components are mapped to secure gateway features. Then various configuration options for developing a secure gateway are presented. System solutions for developing a secure gateway are then offered, which are followed by estimated component costs for a secure gateway. The cost of three configurations for implementing the secure gateway are offered as system solutions. Last, the certification process for a secure gateway is presented. The certification process of a secure gateway must be determined by the gateway's designated approving authority, i.e., Defense Logistics Agency (DLA) and/or National Security Agency/National Computer Security Center (NSA/NCSC).
