The Sex Factor Victoria Bateman, 2019-07-01 Why did the West become so rich? Why is inequality rising? How 'free' should markets be? And what does sex have to do with it? In this passionate and skilfully argued book, leading feminist Victoria Bateman shows how we can only understand the burning economic issues of our time if we put sex and gender - 'the sex factor' - at the heart of the picture. Spanning the globe and drawing on thousands of years of history, Bateman tells a bold story about how the status and freedom of women are central to our prosperity. Genuine female empowerment requires us not only to recognize the liberating potential of markets and smart government policies but also to challenge the double-standard of many modern feminists when they celebrate the brain while denigrating the body. This iconoclastic book is a devastating exposé of what we have lost from ignoring

'the sex factor' and of how reversing this neglect can drive the smart economic policies we need today.

The Sex Factor in Human Life Thomas Walton Galloway, 2015-06-12 Excerpt from *The Sex Factor in Human Life: A Study Outline for College Men* This handbook is written primarily for groups of college men joined together for voluntary discussion of those points at which sex bears most directly upon the happiness and sanity of every life. It is hoped, however, that it may have in addition a value to any thoughtful men and women in the community who are ready to fit themselves to accept leadership for the sake of the younger

boys. If it should seem to the young men that the discussion in many places is addressed to the problem of educating the younger boys as much as to the specific problems of the college period, the reason for this is twofold. It may aid you, in the first place, to see what has been lacking of that to which you were entitled in your own education. More important still, you have now come to the place, whatever may have been your attitude to your own sex life up to this time, where you must inevitably consider your obligation to your younger brothers at home, to the younger fellows in the fraternity and college, to the boys of your own home neighborhood, and to your own sons in the future. It is your privilege to help do for the newer generation of boys, in respect to sound sex guidance, what no one was prepared to do for you. This is the time when you will be reorganizing your philosophy of life at many points. Your sex I philosophy will unquestionably enter into this change. Genetics of Lactic Acid Bacteria B.J. Wood, Philip J. Warner, 2012-12-06
Beginning with an introduction to relevant genetic techniques, chapters cover all major groups of LAB, including the Bifidobacteria; plasmid biology, gene

transfer, phage, and sugar metabolism; gene expression of various LAB; applications for genetically engineered LAB, including the emerging field of medical applications; and the legal and consumer issues that arise from such applications. This resource will set the benchmark for the state of knowledge of LAB genetics and should be of value to food scientists and other researchers working with LAB in its present and future capacities. Professionals using lactic acid bacteria (LAB) for research and/or as working organisms, whether in food and dairy fermentations or in the exciting new field of clinical delivery agents, will find this book invaluable. In addition, professors teaching under- and post-graduates in microbiology, and postgraduate research students will also find this an essential reference work.

The Sex Factor Mary Anne Hall, Janine Little, 2012 Sex turns our media on - and it's been the same story for generations. Whether its newspapers, television or radio, the media machine has always looked to the sexual lives of women to spice up a story and sell the news. But in an age of viral, dirty-laundry epics, humiliation and soft-core pap, this kind of news-making is careles.

Surface Membrane Receptors Ralph Bradshaw, 2012-12-06 The NATO Advanced Study Institute entitled Surface Membrane Receptors: Interface Between Cells and Environment was held in Bellagio, Italy September 13-21, 1975. This meeting was an attempt to bring together in an international and interdisciplinary forum scientists who are studying recognitive phenomena which take place at the surface membrane of cells. While an attempt was made to restrict

the subject areas covered at the meeting to those experimental systems which have been biochemically characterized to some extent, it will also be noted that some contributions to this volume represent a preliminary identification of interesting regulatory substances which might reasonably be expected to act at the cell surface. This book is divided into four sections reflecting the subject areas covered during the course of the meeting. The first section entitled Membrane Structure and Receptor Function is intended as an overview of the role of membrane structure in determining the regulatory properties, physical state, structure and location of cell surface receptors. It should be noted that the plasma membrane itself provided the unifying theme for the intentionally diverse contributions to this volume. The following three sections represent an arbitrary division into three levels of structural complexity of the things in their external environment with which cells must specifically interact.

Sexual Biology and Reproduction in Crustaceans Thanumalaya Subramoniam, 2016-09-27 Sexual Biology and Reproduction in Crustaceans covers crustacean reproduction as it deals with the structural morphology of the gamete-producing primary sex organs, such as the testis and ovary, the formation and maturation of gametes, their fusion during fertilization, and embryonic development that lead to the release of larvae. Constituting a diverse assemblage of animals, crustaceans are best known by their common representatives, such as shrimps, lobsters, and crabs, but also include many more less familiar, but biologically important forms. This work covers the

variety of ways in which both male and female gametes are produced by evolving different sexual systems in crustaceans, the range of reproductive systems, and the accordingly, and highly diverse, mechanistic modes of sex determination. In addition, the book features such topics as genetic and environmental determinants in sex determination pattern, variability of mechanisms of fertilization among different species, the origin of different mating systems, the associated mating and brooding behaviors, and the adaptive ability to different environmental conditions with discussion on the evolutionary ecology of social and sexual systems in certain species, which have shown eusocial tendencies, similar to social insects. Marine species occupying diversified ecological niches in tropical and temperate zones reproduce under definitive environmental conditions. Therefore, reproductive ecology of different crustaceans inhabiting different ecological niches also constitutes another important aspect of the work, along with yolk utilization and embryogenesis leading to release of different larval forms, which reflect on their aquatic adaptability. Forms a valuable source of recent references on the current research in crustacean reproductive physiology Covers various mating and breeding systems, providing illustrative examples for sexual selection, parental care of developing eggs and embryos, and the evolution of other reproductive behaviors Features contributions written in the form of review articles, enabling readers to not only gain information in the respective subject, but also help them stimulate ideas in their chosen field of research Includes a glossary created by the author to define technical terms Demonstrates the ability of crustacean species to serve as useful model systems for other organisms, to investigate issues related to sexual conflict, mate choice, and sperm competition Discusses techniques in

endocrine research to help researchers in aquaculture develop protocols in the control of reproduction

Heredity I Gunsalus, 2012-12-02 The Bacteria: A Treatise on Structure and Function, Volume V: Heredity explores the role of bacterial genetics in heredity. The book includes chapters on genetic fine structure, genetic replication, and gene-enzyme relationships, along with gene transduction, bacterial episomes, and genetic recombination. This volume is organized into 10 chapters and begins with an overview of conjugation as a mechanism of genetic exchange in bacterial species such as *Escherichia coli*, *Salmonella typhosa*, *Pseudomonas aeruginosa*, *Vibrio cholera*, and *Serratia marcescens*. The book then discusses transduction, its uses and evolutionary implications, and the nature of the transducing particle as well as the transduction of galactose genes by bacteriophage lambda. The reader is also introduced to transformation and its use in genetic analysis, along with bacterial episomes and genetic transfer; genetic recombination and other genetic phenomena in streptomyces; and DNA replication. The book concludes by explaining how bacteria should be defined from a biological standpoint. This book is a valuable source of information for geneticists, biochemists, biologists, and research workers involved in the biological sciences.

The Family Planning Association and Contraceptive Science and Technology in Mid-Twentieth-Century Britain Natasha Szuhán, 2022-08-18 This book offers the first in-depth investigation into the relationship between the National Birth Control Association, later the Family Planning Association, and contraceptive science and technology in the pre-Pill era. It explores the Association's role in designing and supporting scientific research, employment of scientists, engagement with manufacturers and pharmaceutical companies, and

use of its facilities, patients, staff, medical, scientific, and political networks to standardise and guarantee contraceptive technology it prescribed and produced. By taking a micro-history approach to the archives of the Association, this book highlights the importance of this organisation to the history of science, technology, and medicine in twentieth-century Britain. It examines the Association's participation within Western family planning networks, working particularly closely with its American counterparts to develop chemical and biological means of testing contraception for efficacy, quality, and safety.
