### **The Power of Sound** Edmund Gurney,1880

**Sex Sounds** Danielle Shlomit Sofer,2022-07-05 An investigation of sexual themes in electronic music since the 1950s, with detailed case studies of “electrosexual music” by a wide range of creators. In *Sex Sounds*, Danielle Shlomit Sofer investigates the repeated focus on sexual themes in electronic music since the 1950s. Debunking electronic music’s origin myth—that it emerged in France and Germany, invented by Pierre Schaeffer and Karlheinz Stockhausen, respectively—Sofer defines electronic music more inclusively to mean any music with an electronic component, drawing connections between academic institutions, radio studios, experimental music practice, hip-hop production, and histories of independent and commercial popular music. Through a broad array of detailed case studies—examining music that ranges from Schaeffer’s *musique concrète* to a video workshop by Annie Sprinkle—Sofer offers a groundbreaking look at the social and cultural impact sex has had on audible creative practices. Sofer argues that “electrosexual music” has two central characteristics: the feminized voice and the “climax mechanism.” Sofer traces the historical fascination with electrified sex sounds, showing that works representing women’s presumed sexual experience operate according to masculinist heterosexual tropes, and presenting examples that typify the electroacoustic sexual canon. Noting electronic music history’s exclusion of works created by women, people of color, women of color, and, in particular Black artists, Sofer then analyzes musical examples that depart from and disrupt the electroacoustic norms, showing how even those that resist the norms sometimes reinforce them. These examples are drawn from categories of music that developed in parallel with conventional electroacoustic music, separated—segregated—from it. Sofer demonstrates that electrosexual music is far more representative than the typically presented electroacoustic canon.

**Courtship and Mate-finding in Insects** Raymond J.C. Cannon,2023-06-30 This book explores mate-finding and courtship behaviour in the insect world, in all its subtlety and diversity. Insects engage in courtship as much, or as little, as any other animal; they have songs and dances, and all manner of instruments and ornaments to attract and court the opposite sex. Insects have evolved complex chemical and acoustic communication systems, sending fragrant messages, visual signals and subtle vibrations to attract and persuade. Insects also have many different ways and means of choosing or rejecting mating partners. This beautifully illustrated book shows the incredible variety of courtship behaviours and celebrates the wonderful natural history of a wide range of insects. Varieties of courtship can occur before, during and even after copulation, and numerous examples of the different mating strategies used are presented. This landmark volume will be of interest to students of biology, entomologists, naturalists and anyone with a desire to know more about the love lives of the small creatures with which we share the planet.

**Of Sound Mind** Nina Kraus,2021-09-28 How sound leaves a fundamental imprint on who we are. Making sense of sound is one of the hardest jobs we ask our brains to do. In *Of Sound Mind*, Nina Kraus examines the partnership of sound and brain, showing for the first time that the processing of sound drives many of the brain’s core functions. Our hearing is always on--we can’t close our ears the way we close our eyes--and yet we can ignore sounds that are unimportant. We don’t just hear; we engage with sounds. Kraus explores what goes on in our brains when we hear a word--or a chord, or a meow, or a screech. Our hearing brain, Kraus tells us, is vast. It interacts with what we know, with our emotions, with how we think, with our movements, and with our other senses. Auditory neurons make calculations at one-thousandth of a second; hearing is the speediest of our senses. Sound plays an unrecognized role in both healthy and hurting brains. Kraus explores the power of music for healing as well as the destructive power of noise on the nervous system. She traces what happens in the brain when we speak

another language, have a language disorder, experience rhythm, listen to birdsong, or suffer a concussion. Kraus shows how our engagement with sound leaves a fundamental imprint on who we are. The sounds of our lives shape our brains, for better and for worse, and help us build the sonic world we live in.
