The Shadow Galaxy J. Dianne Dotson, 2023-03-03

"These stories are as lyrical, uplifting, otherworldly and unsettling as any faerie tale, and demonstrate Dotson's ability to write confidently across a wide range of genres, including fantasy, science fiction, and horror." —Gareth L. Powell, author of *Stars and Bones* "A deeply satisfying collection of fantasies that ranges from Americana to outer space, charming and precise in equal measure." —Paul Cornell, author of *Witches of Lychford* and *I Walk With Monsters* A mesmerizing first collection from the cross-genre author, science writer, and artist J. Dianne Dotson, *The Shadow Galaxy* features short stories and poetry spanning magical realism, science fiction, fantasy, horror, and Appalachian tales. With stories and poetry spanning three decades of work, the author taps into journeys both fantastical and deeply personal. Categories include *Shadow Shores: Tales from the Sea*; *Other Futures: Tales of the Galaxy and a Place Called Earth*; *Into the Darkest Hollow: Tales of Horror*; *Love and Other Moments: Traces of the Heart*; *Far Appalachia: Tales from the Ancient Mountains*; and *Resonant Thoughts: Some Poetry*. Among these pages, Dotson captures the longing, regrets, and dreams of those living by the sea, such as in "One Evening in Fogvale." In "RODER," a young woman risks her life to help find a robot who captured her heart. "Topaz Sundered" explores an exoplanet mining expedition gone horribly wrong. In "The Queen and the Mountain Laurel," a young Appalachian girl teaches her father an important lesson with the help of mountain spirits. The poem "Obsidian" eviscerates with raw pain from betrayal. Dotson weaves these and many other tales and poems of mysticism, exploration, horror, pain, nostalgia, and wonder, for no shadow can exist without light.

The Shadow of Earth (Expansion Andrei

Livadny, 2018-03-17 The time of the Great Exodus is over. Centuries have passed. Earth is overpopulated and the fate of the colonists who traveled to the stars is unknown. An attempt to start the second wave of expansion has led to a shocking discovery: all accessible planets located within one hyperjump from the Solar System have been settled during the Great Exodus. The colonists have created unique and distinctive civilizations - but none of that matters when the survival of billions of Terrans is at stake.

Shadow Alana Khan, 2019-06-30 Can two broken people release their demons, open their hearts, and find lasting love? Petra's strong, take-no-prisoners attitude is severely challenged when she's abducted by aliens, destined to be sold as a sex slave. To escape, she needs the help of the most irritating, hunky alien male this side of the Milky Way. Their chemistry is off the charts despite the fact that Shadow can be an annoying dick. Sold into the gladiator arena by his own parents, the only emotion this alien knows is anger. Until he meets Petra, whose grit, as well as her delightful body, sets him on fire. She isn't interested in anything more than a physical relationship, until she realizes there might be something worth fighting for beneath his cocky exterior. If you like angsty alien alphas ripe for redemption and the kick-ass heroines who can tame them, then join Petra and Shadow in this standalone second book of the Sci-fi romance Galaxy Gladiators Series. Contains steamy sex scenes, hot muscular aliens who've been damaged and patched back together, and badass heroines. Guaranteed no cliffhanger, no cheating, and a happily ever after. But Shadow today to step into this world of darkness, humor, and romance! Have you read Zar and want to know how Shadow becomes such an angsty jerk? Sign up for Alana's free

newsletter to get Terminus, the novelette that explains why he's so unlikeable as well as how he lost his eye. <https://alanakhan.com/>

New Horizons from Multi-Wavelength Sky Surveys Brian J. McLean, Daniel A. Golombek, Jeffrey J.E. Hayes, Harry E. Payne, 2012-12-06 Large area sky surveys are now a reality in the radio, IR, optical and X-ray passbands. In the next few years, new surveys using optical, UV and IR mosaic cameras with high throughput digital detectors will expand the dynamic range and accuracy of photometry and astrometry of objects over a significant fraction of the entire sky. Parallel X-ray and radio surveys over the same areas will produce astronomical image and spectroscopic databases of unprecedented size and quality. The combined data sets will provide significant new constraints on star formation, stellar dynamics, Galactic structure, the evolution of galaxies and large scale structure, as well as new opportunities to identify rare objects in the

solar system and the Galaxy. Large area surveys have formidable data acquisition, processing, archiving, and data distribution demands and this meeting provided a forum for sharing experiences amongst workers specializing in different wavebands as well as discussing how multiband observations can reveal fundamental relationships in our understanding of the Universe.

Chasing the Shadows Maria V. Snyder, 2019-11-18
2020 PRISM Award Winner! Year 2522. Lyra Daniels is dead. Okay, so I only died for sixty-six seconds. But when I came back to life, I got a brand new name and a snazzy new uniform. Go me! Seriously, though, it's very important that Lyra Daniels stays dead, at least as far as the murdering looters, know. While dying is the scariest thing that's happened to me, it morphed my worming skills. I can manipulate the Q-net like never before. But the looters have blocked us from communicating with the rest of the galaxy and now they believe we've gone silent, like Planet Xinji (where silent really means dead). A Protector Class spaceship is coming to our rescue, but we still have to survive almost two years until they arrive - if they arrive at all. Until then, we have to figure out how to stop an unstoppable alien threat. And it's only a matter of time before the looters learn I'm not dead and returns to finish what they started. There's no way I'm going to let the looters win. Instead I'll do whatever it takes to save the people I love. But even I'm running out of ideas...

Challenging Modern Physics Al Kelly, 2005
Newton's Laws held for 300 years until Einstein developed the 'special theory of relativity' in 1905. Experiments done since then show anomalies in that theory. This book starts with a description of the special theory of relativity. It is shown that Einstein was not the first to derive the famous equation $E = mc^2$, which has

become synonymous with his name. Next, experimental evidence that cannot be explained by special relativity is given. In the light of this evidence, the two basic postulates of the special theory of relativity on the behaviour of light are shown to be untenable. A new theory (universal relativity) is developed, which conforms to the experimental evidence. The movement of a conductor near a pole of a magnet and the movement of that pole near the conductor does not always give the same result. It has been claimed that this contradicts relativity theory. Experiments described in this book show that it is not special relativity but another basic law of physics that is contradicted - Faraday's Law. The Big Bang theory of the beginning of the universe is questioned and an alternative proposed. The source of much of the mysterious missing 'dark matter' that has been sought for decades by astronomers is located. An explanation of the shapes of some galaxies is proffered. This book presents an alternative to Einstein's special theory of relativity, solves many problems left unanswered by special relativity, gives a better fit to many phenomena and experimental data and is more philosophically appealing. It is recommended to all people interested in fundamental issues of physics and cosmology. Professor Andre Assis, Brazil The book treats its subject properly, not just as an impersonal set of equations, but rather as a developing saga full of human triumph and failure. One learns from both experimental results and simple logical argument that all is not well with modern physics. Dr. Neal Graneau, Oxford University, U.K. Irish engineer solves the dark secrets of space. Sunday Times, U.K. Einstein got relativity theory wrong. Bangkok Post, Thailand

Legacy of Shadow Craig Gallant, 2016-05-07 Two men of earth stumble upon an artifact that bestows upon one of them control of and responsibility for

an ancient space station that stands as the last bastion of freedom in the galaxy. With the support of his friend and others he meets along the way, he does his best to fill the office until a suitable successor can be found. At the same time forces of galactic oppression move to use his presence as an excuse to crush the station. He battles determined enemies, betrayal, and his own inner demons to defend the position blind luck put him into, but in the process, he might have started a process that might destroy every human in the galaxy.

The Shadow of Black Holes Arne

Grenzebach, 2016-05-07 This book introduces an analytic method to describe the shadow of black holes. As an introduction, it presents a survey of the attempts to observe the shadow of galactic black holes. Based on a detailed discussion of the Plebański-Demiański class of space-times, the book derives analytical formulas for the photon regions and for the boundary curve of the shadow as seen by an observer in the domain of outer communication. It also analyzes how the shadow depends on the motion of the observer. For all cases, the photon regions and shadows are visualized for various values of the parameters. Finally, it considers how the analytical formulas can be used for calculating the horizontal and vertical angular diameters of the shadow, and estimates values for the black holes at the centers of our Galaxy near Sgr A* and of the neighboring galaxy M87.
