**Environment and Children** Christopher Day,Anita Midbjer,2007-08-31 How does the built environment affect children - their health, their behaviour, education and development? To support them, what do we need to consider and what do we need to do? Can our surroundings foster environmental and social awareness and responsibility? Based on Christopher Day's experiences designing schools and early childhood centres in the United States and Britain, this groundbreaking book sets out to answer these questions and to offer solutions. Children all too often find themselves living in alien surroundings designed with the needs of adults in mind, cut off not just from the natural environment but also childhood itself. Society's reaction - to cocoon children from the outside world or to resort to drugs to control behaviour - fails to address the fundamental causes of problems which lie in the environment not the children themselves. One of the world's leading thinkers on the impact of buildings on people, Christopher Day's insights offer new light on one of the most important issues for today's society.

**Sewing Techniques** Jennifer Prendergast,2021-03-11 Sewing techniques are sometimes overlooked in the design process but acquiring these skills can be transformational. The ability to turn a two-dimensional design into its three-dimensional realization comes from having mastered basic sewing techniques. Sewing Techniques simplifies the often complex techniques that lie behind this process by arming designers with the precise information and skills needed to undertake each task. Designers who develop a basic understanding of the processes involved in sample and garment construction often produce successful outcomes based on a more experimental and creative approach applied during the product development process. Developing a sample folio and being able to refer to samples and develop them according to each individual design project is a process that requires experimentation and creative thought underpinned by a basic understanding of sewing techniques. This book explores the essential equipment needed - from fabric types to diagrams identifying component parts of a sewing machine, to machine operation. Throughout each process, clear diagrams accompanied by explanatory description panels allow readers to achieve the best possible results, including how to troubleshoot problems that may be encountered before and during sewing. Each section concludes with a project, progressing from easy to challenging. Fabrics for each project give designers the opportunity to handle different fabric types and understand the complexities of sourcing and selecting. Mastering the basic principles covered in Sewing Techniques will enable both fashion students and the contemporary craftworker to develop their techniques with a view to becoming creative practice-based professionals.

*Children with Developmental Disabilities* S Venkatesan,2004-03-20 Disability is the functional inability of an individual to perform any activity in the manner or within the range considered 'normal'. These are relatively permanent conditions and in most cases can be tackled only by early intervention and long-term therapy. The accurate diagnosis of a child with a disorder is an important prelude to planning the right programme for intervention and rehabilitation. The book is intended for

early identification of such developmental problems in infants and pre-school children. It covers a wide range of impairments, disabilities and handicaps commonly seen in young children. It is meant to enable parents to appreciate their manifestations, prevalence and characteristics. The book recognizes the importance of home-based programmes and contains lists of more than 400 activities as non-formal curriculum for young children. It carries broad guidelines on how to train children for these activities at home or pre-school settings. This book will be of great help to parents and trainers who are searching for suggestions from professionals on not only what training to impart to these children, but also how to train them at low cost and within their home settings. The book also serves as a reference guide for students of disability management or rehabilitation sciences. All teaching objectives and items included in this practical guide are empirically validated and located along a hierarchical scale of developmental difficulty. They are worded in behavioural terms so that trainers can readily start working on the given goals for behaviour change in the children. This book is meant for students and professionals in the field of rehabilitation services for disabled, general or special education programmes, parents of pre-school children, those who run play schools or crèches, non-formal educators, speech therapists, occupational therapists, physiotherapists and paediatricians.
