**Still Life** Melissa Milgrom,2010-02-14 After her curiosity is piqued by a safari gone awry, a journalist delves into the curious world of taxidermy and shares her findings. It’s easy to dismiss taxidermy as a kitschy or morbid sideline, the realm of trophy fish and jackalopes or an anachronistic throwback to the dusty diorama. Yet theirs is a world of intrepid hunter-explorers, eccentric naturalists, and gifted museum artisans, all devoted to the paradoxical pursuit of creating the illusion of life. Into this subculture of passionate animal-lovers ventures journalist Melissa Milgrom, whose journey stretches from the anachronistic family workshop of the last chief taxidermist for the American Museum of Natural History to the studio where an English sculptor, granddaughter of a surrealist artist, preserves the animals for Damien Hirst’s most disturbing artworks. She wanders through Mr. Potter’s Museum of Curiosities in the final days of its existence to watch dealers vie for preserved Victorian oddities, and visits the Smithsonian’s offsite lab, where taxidermists transform zoo skins into vivacious beasts. She tags along with a Canadian bear trapper and former Roy Orbison impersonator—the three-time World Taxidermy Champion—as he resurrects an extinct Irish elk using DNA studies and Paleolithic cave art for reference; she even ultimately picks up a scalpel and stuffs her own squirrel. Transformed from a curious onlooker to an empathetic participant, Milgrom takes us deep into the world of taxidermy and reveals its uncanny appeal. “Hilarious but respectful.” —Washington Post “Engrossing.” —New Yorker “[A] delightful debut . . . Milgrom has in Still Life opened up a whole world to readers.” —Chicago Tribune “Milgrom’s lively account will appeal to readers who enjoyed Mary Roach’s quirky science books.” —Library Journal

*Reproduction and Development of Marine Invertebrates of the Northern Pacific Coast* Megumi F. Strathmann,2017-10-01 This reference work is designed to provide background information on an array of northeastern Pacific marine invertebrate species so that they can be more easily included in comparative studies of morphology, cell biology, reproduction, embryology, larval biology, and ecology. It is meant to serve biologists who are new to the field as well as experienced investigators who may not be familiar with the invertebrate fauna of the northern Pacific Coast. The species discussed in this volume are mostly from the cold temperate waters of the San Juan Archipelago, near Puget Sound and the Strait of Georgia, but the information and methods given will be useful in laboratories from Alaska to central California and applicable to some extend in other coastal or inland facilities. An introductory chapter discusses basic procedures for collecting and maintaining mature specimens, for initiating spawning, and for culturing embryos and larvae in the laboratory. Subsequent chapters summarize reproduction and development in thirty different invertebrate groups and provided recent references through which additional information can be traced, cite monographs or keys needed to identify species, and give methods useful for studying an array of selected species. Available information on habitat, diet, reproductive mode, egg size, developmental pattern, developmental times, larval type, and conditions for settlement and metamorphosis is reported for over 450 species.
