Joseph Turow

The Aisles Have Eyes Joseph Turow, 2017-01-17 The author of Media Today offers “a trenchant, timely, and troubling account of [retailers’] data-mining, in-store tracking, and predictive analytics” (The Philadelphia Inquirer). By one expert’s prediction, within twenty years half of Americans will have body implants that tell retailers how they feel about specific products as they browse their local stores. The notion may be outlandish, but it reflects executives’ drive to understand shoppers in the aisles with the same obsessive detail that they track us online. In fact, a hidden surveillance revolution is already taking place inside brick-and-mortar stores, where Americans still do most of their buying. Drawing on his interviews with retail executives, analysis of trade publications, and experiences at insider industry meetings, advertising and digital studies expert Joseph Turow pulls back the curtain on these trends, showing how a new hyper-competitive generation of merchants—including Macy’s, Target, and Walmart—is already using data mining, in-store tracking, and predictive analytics to change the way we buy, undermine our privacy, and define our reputations. Eye-opening and timely, Turow’s book is essential reading to understand the future of shopping. “Turow shows shopping today to be an exercise in unwitting self-revelation—and not only online.”—The Wall Street Journal “Thoroughly researched and clearly presented with detailed evidence and fascinating peeks inside the retail industry. Much of this information is startling and even chilling, particularly when Turow shows how retail data-tracking can enable discrimination and societal stratification.”—Publishers Weekly “Revealing . . . Valuable reading for shoppers and retailers alike.”—Kirkus Reviews

Mobile Influence Chuck Martin,2013-06-11 The explosion of mobile access across the globe has shaken the foundations of the traditional sales funnel, and businesses are scrambling to adapt and find new ways to tap into the market. For all their effort, many have failed to realize that the issue is not how to reach the customer where they are, but where they are going and their mindset at the moment. With the staggering growth in the use of mobile technology as both product research and purchase point, businesses have yet to fully understand the important role mobile devices play in the basic structure of the traditional shopping model and the new importance on linking behavior with location. With the death of the traditional sales funnel comes author Chuck Martin's new model, the Mobile Shopping Life Cycle. Based on the author's in-depth research, Martin has identified the six

specific moments in the timeline of the sale which marketers must target effectively in order to reach the mobile buyer. From location-based marketing to mobile payment systems, Martin's model gives marketers access to the tools necessary to build a new sales framework that properly addresses the future of the market.

Augmented Brett King, Andy Lark, Alex Lightman, JP Rangaswami, 2016-05-15 The Internet and smartphone are just the latest in a 250-year-long cycle of disruption that has continuously changed the way we live, the way we work and the way we interact. The coming Augmented Age, however, promises a level of disruption, behavioural shifts and changes that are unparalleled. While consumers today are camping outside of an Apple store waiting to be one of the first to score a new Apple Watch or iPhone, the next generation of wearables will be able to predict if we're likely to have a heart attack and recommend a course of action. We watch news of Google's self-driving cars, but don't likely realise this means progressive cities will have to ban human drivers in the next decade because us humans are too risky. Following on from the Industrial or machine age, the space age and the digital age, the Augmented Age will be based on four key disruptive themes—Artificial Intelligence, Experience Design, Smart Infrastructure, and HealthTech. Historically the previous 'ages' brought significant disruption and changes, but on a net basis jobs were created, wealth was enhanced, and the health and security of society improved. What will the Augmented Age bring? Will robots take our jobs, and AI's subsume us as inferior intelligences, or will this usher in a new age of abundance? *Augmented* is a book on future history, but more than that, it is a story about how you will live your life in a world that will change more in the next 20 years than it has in the last 250 years. Are you ready to adapt? Because if history proves anything, you don't have much of a choice.

Mobility and Locative Media Adriana de Souza e Silva, Mimi Sheller, 2014-08-07 *Mobilities* has become an important framework to understand and analyze contemporary social, spatial, economic and political practices. Especially as mobile media become seamlessly integrated into transportation networks, navigating urban spaces, and connecting with social networks while on the move, researchers need new approaches and methods to bring together mobilities with mobile communication and locative media. Mobile communication scholars have focused on cell phones, often ignoring broader connections to urban spaces, geography, and locational media. As a result, they emphasized virtual mobility and personalized communication as a way of disconnecting from place, location and publics. The growing pervasiveness of location-aware technology urges us to rethink the intersection among location, mobile technologies and mobility. Few studies have addressed the many transformations taking place in mobile sociality and in urban spatial processes through the appropriation of these technologies. The Impulse Economy Gary Schwartz, 2011-11-01 We live in a world where our mobile devices have become extensions of ourselves. We depend on them for instant connections to entertainment, social media, news, and deals. The phone has become our ticket, loyalty card, and catchall wallet. Networks are faster, phones are smarter, and the mobile shopper is ready to spend money now. What can a business do to maximize the mobile buying power of the new impulse consumer? Gary Schwartz has written a groundbreaking book that outlines the history of the mobile industry and shows just how businesses can build up their mobile platforms to maximize online sales. He'll explain: • How to

minimize barriers between the shopper and a sale. • How marketers can connect and, more important, reconnect with loyal shoppers. • The technology available now—and what’s coming soon—and how to pick a solution that will deliver results. But like Blink or Freakonomics, this isn’t just a book for businesses. It’s also an eye-opening look into the ways our economy is changing every second of every day. Gary Schwartz analyzes a phenomenon that’s modifying people’s actions and challenges our assumptions about our behavior as consumers. Anyone interested in the ways our behavior as shoppers is changing—and what we can do to better harness this opportunity—will find this book to be essential reading.

Handbook of Research on Cross-Disciplinary Uses of Gamification in Organizations Bernardes, Oscar, Amorim, Vanessa, Moreira, António Carrizo, 2022-01-28 Gaming is increasingly prevalent in our society and everyday lives as a form of leisure or competition. The typical aim of gaming is to gain a pleasant experience from the game. Because of the saturation of gaming in global society, the gamification concept and its operationalization in non-gaming contexts has become a growing practice. This technological novelty is the basis for an innovative change in many types of environments such as education, commerce, marketing, work, health, governance, and sustainability, among others. The service sector especially has shown widespread adoption of the method as it seeks to increase and motivate audiences and promote brands. However, little research is available on the adoption of gamification in organizations, leading to a need for literature that investigates best practices for utilization and implementation. The Handbook of Research on Cross-Disciplinary Uses of Gamification in Organizations is a comprehensive and timely reference book that explores the field of gamification for economic and social development. This book provides dynamic research from this emerging field. Covering topics such as distance learning, health behaviors, and workplace training, this book is a valuable reference for researchers, marketing managers, students, managers, executives, software developers, IT specialists, technology developers, faculty of P-12 and higher education, teachers, professors, government officials, and academicians.
