Handbook of Research on Food Processing and Preservation

Technologies Preeti Birwal,Megh R. Goyal,Monika Sharma,2021-11-25

The Handbook of Research on Food Processing and Preservation

Technologies is a rich 5-volume collection that illustrates various

design, development, and applications of novel and innovative

strategies for food processing and preservation. The roles and

applications of minimal processing techniques (such as ozone

treatment, vacuum drying, osmotic dehydration, dense phase carbon

dioxide treatment, pulsed electric field, and high-pressure assisted

freezing) are discussed, along with a wide range of other applications.

The handbook also explores some exciting computer-aided techniques

emerging in the food processing sector, such as robotics, radio

frequency identification (RFID), three-dimensional food printing,

artificial intelligence, etc. Some emphasis has also been given on

nondestructive quality evaluation techniques (such as image

processing, terahertz spectroscopy imaging technique, near infrared,

Fourier transform infrared spectroscopy technique, etc.) for food

quality and safety evaluation. The significant roles of food properties

in the design of specific foods and edible films have been elucidated as

well. Volume 3: Computer-Aided Food Processing and Quality

Evaluation Techniques of the multi-volume set reports on a number

of applications of computer-aided techniques for quality evaluation and

to secure food quality. The chapter authors present emerging

nonthermal approaches for food processing and preservation including

a detailed discussion on color measurement techniques, RFID, 3D-food

printing, potential of robotics, artificial intelligence, terahertz spectroscopy imaging technique, instrumentation techniques and transducers, food labeling as marketing and quality assurance tool, detection of pesticides, mathematical simulation of moisture sorption in food products, numerical methods and modeling techniques, concept of phase change materials, and dielectric properties of animal source foods. Other volumes in the set include: Volume 1: Nonthermal and Innovative Food Processing Methods Volume 2: Nonthermal Food Preservation and Novel Processing Strategies Volume 3: Computer-Aided Food Processing and Quality Evaluation Techniques Volume 4: Design and Development of Specific Foods, Packaging Systems, and Food Safety Volume 5: Emerging Techniques for Food Processing, Quality, and Safety Assurance Along with the other volumes, Handbook of Research on Food Processing and Preservation Technologies provides an abundance of valuable information and will be an excellent reference for researchers, scientists, students, growers, traders, processors, industries, and others.
