Super PACs Louise I. Gerdes, 2014-05-20 The passage of Citizens United by the Supreme Court in 2010 sparked a renewed debate about campaign spending by large political action committees, or Super PACs. Its ruling said that it is okay for corporations and labor unions to spend as much as they want in advertising and other methods to convince people to vote for or against a candidate. This book provides a wide range of opinions on the issue. Includes primary and secondary sources from a variety of perspectives; eyewitnesses, scientific journals, government officials, and many others.

Introduction to Semi-Supervised Learning Xiaojin Geffner, Andrew

Bazzan, 2022-05-31 Semi-supervised learning is a learning paradigm concerned with the study of how computers and natural systems such as humans learn in the presence of both labeled and unlabeled data. Traditionally, learning has been studied either in the unsupervised paradigm (e.g., clustering, outlier detection) where all the data are unlabeled, or in the supervised paradigm (e.g., classification, regression) where all the data are labeled. The goal of semi-supervised learning is to understand how combining labeled and unlabeled data may change the learning behavior, and design algorithms that take advantage of such a combination. Semi-supervised learning is of great interest in machine learning and data mining because it can use readily available unlabeled data to improve supervised learning tasks when the labeled data are scarce or expensive. Semi-supervised learning also shows potential as a quantitative tool to understand human category learning, where most of the input is self-evidently unlabeled. In this introductory book, we present some popular semi-supervised learning models, including self-training, mixture models, co-training and multiview learning, graph-based methods, and semi-supervised support vector machines. For each model, we discuss its basic mathematical formulation. The success of semi-supervised learning depends critically on some underlying assumptions. We emphasize the assumptions made by each model and give counterexamples when appropriate to demonstrate the limitations of the different models. In addition, we discuss semi-supervised learning for cognitive psychology. Finally, we give a computational learning theoretic perspective on semi-supervised learning, and we conclude the book with a brief discussion of open questions in the field. An Introduction to Kolmogorov Complexity and Its Applications Ming Li, Paul Vitanyi, 1997-02-27 Briefly, we review the basic elements of computability theory and probability theory that are required. Finally, in order to place the subject in the appropriate historical and conceptual context we trace the main roots of Kolmogorov complexity. This way the stage is set for Chapters 2 and 3, where we introduce the notion of optimal effective descriptions of objects. The length of such a description (or the number of bits of information in it) is its Kolmogorov complexity. We treat all aspects of the elementary mathematical theory of Kolmogorov complexity. This body of knowledge may be called algorithmic complexity theory. The theory of Martin-Lof tests for randomness of finite objects and infinite sequences is inextricably intertwined with the theory of Kolmogorov complexity and is completely treated. We also investigate the statistical properties of finite strings with high Kolmogorov complexity. Both of these topics are eminently useful in the applications part of the book. We also investigate the recursion theoretic properties of Kolmogorov complexity (relations with Godel's incompleteness result), and the Kolmogorov complexity version of information theory, which we may call algorithmic information theory or absolute information theory. The treatment of algorithmic probability theory in Chapter 4 presupposes Sections 1.6, 1.11.2, and Chapter 3 (at least Sections 3.1 through 3.4).

Stochastic Algorithms: Foundations and Applications Osamu Watanabe, Thomas Zeugmann, 2009-10-05 The 5th Symposium on Stochastic Algorithms, Foundations and Applications (SAGA 2009) took place during October 26–28, 2009, at Hokkaido University, Sapporo (Japan). The symposium was organized by the Division of Computer Science, Graduate School of Computer Science and Technology, Hokkaido University. It offered the opportunity to present original research on the design and analysis of randomized algorithms, random combinatorial structures, implementation, experimental evaluation and real-world application of stochastic algorithms/heuristics. In particular, the focus of the SAGA symposia series is on investigating the power of randomization in algorithms, and on the theory of stochastic processes especially within realistic scenarios and applications. Thus, the scope of the symposium ranges from the study of theoretical fundamentals of randomized computation to experimental investigations on algorithms/heuristics and related stochastic processes. The SAGA symposium series is a biennial meeting. Previous SAGA symposia took place in Berlin, Germany (2001, LNCS vol. 2264), Hatfield, UK (2003, LNCS vol. 2827), Moscow, Russia (2005, LNCS vol. 3777), and Zurich, Switzerland (2007, LNCS vol. 4665). This year 22 submissions were received, and the Program Committee selected 15 submissions for presentation. All papers were evaluated by at least three members of the Program Committee, partly with the assistance of subreferees. The present volume contains the texts of the 15 papers presented at SAGA 2009, divided into groups of papers on learning, graphs, testing, optimization, and caching as well as on stochastic algorithms in bioinformatics.

Theory of Cryptography Eyal Kushilevitz, Tal Malkin, 2015-12-21 The two-volume set LNCS 9562 and LNCS 9563 constitutes the refereed proceedings of the 13th International Conference on Theory of Cryptography, TCC 2016, held in Tel Aviv, Israel, in January 2016. The 45 revised full papers presented were carefully reviewed and selected from 112 submissions. The papers are organized in topical sections on obfuscation, differential privacy, LWR and LPN, public key encryption, signatures, and VRF, complexity of cryptographic primitives, multiparty computation, zero knowledge and PCP, oblivious RAM, ABE and IBE, and codes and interactive proofs. The volume also includes an invited talk on cryptographic assumptions.

Handbook of Computer Game Studies Joost Raessens, Jeffrey

Goldstein,2011-08-19 A broad treatment of computer and video games from a wide range of perspectives, including cognitive science and artificial intelligence, psychology, history, film and theater, cultural studies, and philosophy. New media students, teachers, and professionals have long needed a comprehensive scholarly treatment of digital games that deals with the history, design, reception, and aesthetics of games along with their social and cultural context. The Handbook of Computer Game Studies fills this need with a definitive look at the subject from a broad range of perspectives. Contributors come from cognitive science and artificial intelligence, developmental, social, and clinical psychology, history, film, theater, and literary studies, cultural studies, and philosophy as well as game design and development. The text includes both scholarly articles and journalism from such well-known voices as Douglas Rushkoff, Sherry Turkle, Henry Jenkins, Katie Salen, Eric Zimmerman, and others. Part I considers the prehistory of computer games (including slot machines and pinball machines), the development of computer games themselves, and the future of mobile gaming. The chapters in part II describe game development from the designer's point of view, including the design of play elements, an analysis of screenwriting, and game-based learning. Part III reviews empirical research on the psychological effects of computer games, and includes a discussion of the use of computer games in clinical and educational settings. Part IV considers the aesthetics of games in comparison to film and literature, and part V discusses the effect of computer games on cultural identity, including gender and ethnicity. Finally, part VI looks at the relation of computer games to social behavior, considering, among other matters, the inadequacy of laboratory experiments linking games and aggression and the different modes of participation in computer game culture.
