Area Sampling Strategies in Relation to Land Use Monitoring Needs and Objectives C. R. Bryant, Lorne H. Russwurm, 1983 Given the need to monitor what is happening to Canada's land resources, the Canada Land Use Monitoring Program in the Lands Directorate of Environment Canada has already initiated projects dealing with land use changes in the urban-centred regions and prime resource lands of the country. Beyond these urban-fringe and unique areas, there are still vast areas of rural resource lands which are also undergoing various changes consequent upon urbanization and economic development. In this report, based on an appreciation of the nature of rural land use change, a conceptual framework for reviewing sampling strategies and a review of selected existing sampling programs in other countries, recommendations are made on the broad structure of a rural land use monitoring program for Canada and on the necessary next steps required prior to eventual implementation--Abstract.

Home Blood Pressure Monitoring George S. Stergiou, Gianfranco Parati, Giuseppe Mancia, 2019-10-31 Hypertension remains a leading cause of disability and death worldwide. Self-monitoring of blood pressure by patients at home is currently recommended as a valuable tool for the diagnosis and management of hypertension. Unfortunately, in clinical practice, home blood pressure monitoring is often inadequately implemented, mostly due to the use of inaccurate devices and inappropriate methodologies. Thus, the potential of the method to improve the management of hypertension and cardiovascular disease prevention has not yet been exhausted. This volume presents the available evidence on home blood pressure monitoring, discusses its strengths and limitations, and presents strategies for its optimal implementation in clinical practice. Written by distinguished international experts, it offers a complete source of information and guide for practitioners and researchers dealing with the management of hypertension.

Conservation and Sustainable Use E. J. Milner-Gulland, J. Marcus Rowcliffe, 2007-11-15 The relentless exploitation and unsustainable use of wildlife, whether for food, medicine or other uses, is a key concern for conservationists worldwide. Indeed, wildlife conservation and sustainable use have recently become centrepieces in conservation and development research. Assessment, interpretation and ultimate action in a scientific study of exploited species must consider numerous factors: from the biology, habitat requirements and population dynamics of the species in question to the relationships that people have with their environment and the species within it. Any long-term management plan must ensure that people and wildlife can coexist - otherwise it is doomed to failure. *Conservation and Sustainable Use* provides a practical and integrated approach to carrying out research on the conservation of exploited species. It is relevant to both tropical and temperate biomes and is applicable to all exploited species, including mammals, fish and plants. It describes both the practical (field) and theoretical (modelling) techniques for obtaining and interpreting information, integrating biological, social, economic and institutional analyses. It also demonstrates how to translate information into effective action through appropriate interventions, from legislation to changing people's attitudes. This is the first time that all these issues have been covered together in a single, practically-orientated volume. This book will be essential reading for graduate level students and researchers in conservation biology, human ecology, sociology and resource economics. It will also provide an important reference for anyone who is interested in carrying out a scientifically-based conservation programme for an exploited species, including field biologists, wildlife managers and practitioners in the fields of conservation and international development.

Distribution David Frederick Ross, 1995-11-30 It has been said that every generation of historians seeks to rewrite what a previous generation had established as the standard interpretations of the motives and circumstances shaping the fabric of historical events. It is not that the facts of history have changed. No one will dispute that the battle of Waterloo occurred on June 11, 1815 or that the allied invasion of Europe began on June 6, 1944. What each new age of historians are attempting to do is to reinterpret the motives of men and the force of circumstance impacting the direction of past events based on the factual, social, intellectual, and cultural milieu of their own generation. By examining the facts of history from a new perspective, today's historians hope to reveal some new truth that will not only illuminate the course of history but also validate contemporary values and societal ideals. Although it is true that tackling the task of developing a new text on logistics and distribution channel management focuses less on schools of philosophical and social analysis and more on the calculus of managing sales campaigns, inventory replenishment, and income statements, the goal of the management scientist, like the historian, is to merge the facts and figures of the discipline with today's

organizational, cultural, and economic realities. Hopefully, the result will be a new synthesis, where a whole new perspective will break forth, exposing new directions and opportunities.

Functional Thinking for Value Creation Jürgen Hesselbach, Christoph Herrmann, 2011-03-18 After the IPS2 conferences in Cranfield and Linköping in 2009 and 2010 the 3rd CIRP International Conference on Industrial Product Service Systems (IPS2) 2011 takes place in Braunschweig, Germany. IPS2 itself is defined as “an integrated industrial product and service offering that delivers value in use”. The customers expect comprehensive solutions, which are adapted to their individual needs. IPS2 offers the possibility to stand out from competition and for long-term customer loyalty. Particularly in times of economic crisis it becomes apparent which producing companies understand to satisfy the needs and requirements of their customers. Especially in this relatively new domain IPS2 it will be important to keep track of the whole context and to seek cooperation with other research fields and disciplines. The 3rd CIRP International Conference on Industrial Product Service Systems (IPS2) 2011 serves as a platform for such collaborations and the discussion of new scientific ideas.
