Storm Warning Pauline Halford,2005-01-01 Imagine a world without the weather forecast. Is it likely to be warm and sunny for the fete at the weekend? Will Thursday be a good day to make that ferry crossing, or would Friday be better? We might scorn it and deride it, but we still consult the men - and women - from the Met Office, rather than a piece of soggy seaweed, before deciding whether to set out with a brolly in the morning. More than one hundred and fifty years the best forecast available was the weather glass with its imprecise predictions of 'Fair' or 'Changeable'. Before that, man consulted the animals in the fields, the birds in the sky, clouds, insects, the moon - even astrologers, oracles and the ancient gods. The tale of the emergence of forecasting from mythology, through the weather glass and into meteorology is a story fraught with conflict between scientists and seers. It involves the riding of storms; the scouring of the wide oceans in small sailing ships and soaring to the sky in balloons. This book traces the story of man's attempts to foretell the coming weather, and shows how weather prediction emerged from the realms of the seer and charlatan into credible acceptability. of the weather forecast; 2004 is the 150th anniversary of the establishment of the Met office; 2004 is also the 50th anniversary of the first TV weather forecast; and foreword by Michael Fish.

Vegetal Politics Lesley Head,Jennifer Atchison,Catherine Phillips,Kathleen Buckingham,2017-10-02 Cultural geography has a long and proud tradition of research into human-plant relations. However, until recently, that tradition has been somewhat disconnected from conceptual advances in the social sciences, even those to which cultural geographers have made significant contributions. With a number of important exceptions, plant studies have been less explicitly part of more-than-human geographies than have animal studies. This book aims to redress this gap, recognising plants and their multiple engagements with and beyond humans. Plants are not only fundamental to human survival, they play a key role in many of the most important environmental political issues of the century, including biofuels, carbon economies and food security. This innovative collection explores themes of belonging, practices and places. Together, the chapters suggest new kinds of 'vegetal politics', documenting both collaborative and conflictual relations between humans, plants and others. They open up new spaces of political action and subjectivity, challenging political frames that are confined to humans. The book also raises methodological questions and challenges for future research. This book was published as a special issue of Social and Economic Geography.
