Advances in Computers Marvin

Zelkowitz, 2011-08-09 This is volume 74 of Advances in Computers, subtitled “Recent advances in software development. This series, which began in 1960, is the oldest continuously published series of books that has chronicled the ever- changing landscape of information technology. Each year

three volumes are published, each presenting five to seven chapters describing the latest technology in the use of computers today. In this current volume, we present six chapters that give an update on some of the major issues affecting the development of software today. The six chapters in this volume can be divided into two general categories. The first three deal with the increasing importance of security in the software we write and provide insights into how to increase that security. The three latter chapters look at software development as a whole and provide guidelines in how best to make certain decisions on a project-level basis. The book series is a valuable addition to university courses that emphasize the topics under discussion in that particular volume as well as belonging on the bookshelf of industrial practitioners who need to implement many of the technologies that are described.

Mobile Messaging Technologies and Services

Gwenaël Le Bodic, 2005-07-08 Building on the success of the first edition, Mobile Messaging Technologies and Services offers extensive new and revised material based upon the latest research and industry developments. While early implementations targeted person-to-person messaging, MMS has now evolved to facilitate such requirements as the mass delivery of time-sensitive messages for content-to-person messaging. This Second Edition exploits the technical maturity of MMS as it is poised to generate a wealth of new business opportunities across the mobile communications sector. The

author provides the fundamental technical background required for SMS, EMS and MMS, and supports this with industry cutting-edge developments. ● Contains a revised section on the fundamentals of MMS, including an updated section on GPRS to explain current commercial implementations such as GRX applications. ● Presents the latest developments in MMS standardization, including the design of synchronized multimedia integration language (SMIL) presentations, Digital Rights Management (DRM), transcoding techniques, postcard service and support of advanced multimedia formats. ● Describes the processes for standardizing telecommunications services and technologies (3GPP, OMA, GSM Association, IETF and W3C). ● Provides updated sections on SMS, EMS and heavily revised coverage of the developments in MMS, including MMS interworking and the forthcoming MMS version 1.3. This resource will be invaluable for application developers, manufacturers, operators and content providers involved in the design and deployment of messaging services. It will also be of interest to practitioners involved in the process of standardizing telecommunications services and technologies. Postgraduate students and researchers will benefit from having access to state-of-the-art findings backed by numerous illustrative real-world examples. Includes a companion website featuring information on relevant standards, available phones and developers' resources.

Spam Kings, Hardcover Edition Brian McWilliams, 2004 More than sixty percent of today's

email traffic is spam, according to email filtering firm Brightmail. This year alone, five trillion spam messages will clog Internet users in-boxes, costing society an estimated \$10-billion in lost productivity, filtering software, and other expenses. Spam Kings: The Real Story behind the High-Rolling Hucksters Pushing Porn, Pills, and %*#@# Enlargements is the first book to expose the shadowy world of the people responsible for the junk email problem. Author and veteran investigative journalist Brian S. McWilliams delivers a compelling account of the cat-and-mouse game played by spam entrepreneurs in search of easy fortunes and those who are trying to stop them. Spam Kings chronicles the evolution of Davis Wolfgang Hawke, a notorious neo-Nazi leader (Jewish-born) who got into junk email in 1999. Using Hawke as a case study, Spam Kings traces the twenty-year-old neophyte's rise in the spam trade to his emergence as a major player in the lucrative penis pill market--a business that would eventually make him a millionaire and the target of lawsuits from AOL and others. Spam Kings also tells the parallel story of Susan Gunn, a computer novice in California who is reluctantly drawn into the spam wars and eventually joins a group of anti-spam activists. Her volunteer sleuth work puts her on a collision course with Hawke and other spammers, who try to wreak revenge on the antis. You'll also meet other cyber-vigilantes who have taken up the fight against spammers as well as the cast of quirky characters who comprise Hawke's business associates. The book sheds light on the technical sleight-of-hand--forged headers,

open relays, harvesting tools, and bulletproof hosting--and other sleazy business practices that spammers use; the work of top anti-spam attorneys; the surprising new partnership developing between spammers and computer hackers; and the rise of a new breed of computer viruses designed to turn the PCs of innocent bystanders into secret spam factories.

Machine Learning for Email Drew Conway, John White, 2011-10-27 This compact book explores standard tools for text classification, and teaches the reader how to use machine learning to decide whether a e-mail is spam or ham (binary classification), based on raw data from The SpamAssassin Public Corpus. Of course, sometimes the items in one class are not created equally, or we want to distinguish among them in some meaningful way. The second part of the book will look at how to not only filter spam from our email, but also placing more important messages at the top of the queue. This is a curated excerpt from the upcoming book *Machine Learning for Hackers*.

The Internet, the Web, and EBusiness Kai A. Olsen, 2005 In this clear overview of the fundamental principles of Internet computing, author Kai Olsen defines formalized and unformalized processes, with a focus on the formalization of Internet and Web technologies; discusses eBusiness applications within Business-to-Consumer and Business-to-Business models; presents numerous examples, tables, and graphics to illustrate ideas in an easy-to-understand manner; and prophesizes about the effects that

these technologies will have on everyday life, jobs, and society in the future.

Access Denied Ronald Deibert, John Palfrey, Rafal Rohozinski, Jonathan Zittrain, 2008-01-25 A study of Internet blocking and filtering around the world: analyses by leading researchers and survey results that document filtering practices in dozens of countries. Many countries around the world block or filter Internet content, denying access to information that they deem too sensitive for ordinary citizens—most often about politics, but sometimes relating to sexuality, culture, or religion. Access Denied documents and analyzes Internet filtering practices in more than three dozen countries, offering the first rigorously conducted study of an accelerating trend. Internet filtering takes place in more than three dozen states worldwide, including many countries in

Asia, the Middle East, and North Africa. Related Internet content-control mechanisms are also in place in Canada, the United States and a cluster of countries in Europe. Drawing on a just-completed survey of global Internet filtering undertaken by the OpenNet Initiative (a collaboration of the Berkman Center for Internet and Society at Harvard Law School, the Citizen Lab at the University of Toronto, the Oxford Internet Institute at Oxford University, and the University of Cambridge) and relying on work by regional experts and an extensive network of researchers, *Access Denied* examines the political, legal, social, and cultural contexts of Internet filtering in these states from a variety of perspectives. Chapters discuss the mechanisms and politics of Internet filtering, the strengths and limitations of the technology that powers it, the relevance of international law, ethical considerations for corporations that supply states with the tools for blocking and filtering, and the implications of Internet filtering for activist communities that increasingly rely on Internet technologies for communicating their missions. Reports on Internet content regulation in forty different countries follow, with each two-page country profile outlining the types of content blocked by category and documenting key findings. Contributors Ross Anderson, Malcolm Birdling, Ronald Deibert, Robert Faris, Vesselina Haralampieva [as per Rob Faris], Steven Murdoch, Helmi Noman, John Palfrey, Rafal Rohozinski, Mary Rundle, Nart Villeneuve, Stephanie Wang, Jonathan Zittrain
