**Parking** Dorina Pojani,Jonathan Corcoran,Neil Sipe,Idelina Mateo-Babiano,Dominic Stead,2019-11-21 Most parking research to date has been conducted in Western countries. *Parking: An International Perspective* is different. Taking a planetary view of urbanism, this book examines parking policies in 12 cities on five continents: Auckland, Bangkok, Doha, Los Angeles, Melbourne, Nairobi, Rotterdam, Santiago, Sao Paulo, Shenzhen, Singapore, and Tokyo. Chapters are similarly structured, and contain detailed information about the current parking strategies and issues in these cities. The discussion of parking is placed in the context of transport, mobility, land-use, society, technology, and planning in each of these cities. Features structured case studies focused on summarizing current and emerging trends in parking policy and practice in cities around the world. Provides a systematic comparison of parking issues and approaches across a variety of situational and cultural contexts – examining each city’s transport modes, social trends, land use, technology and planning policies. Offers a bridge between transport planning research and practice related to the latest trends in parking and parking space re-use.

*Shopping Choices with Public Transport Options* Muhammad Faishal Ibrahim, Peter J. McGoldrick, 2017-03-02 In recent years, the environmental, social and economic concerns regarding laissez-faire retail decentralization policies have resulted in an emergence of a global trend towards the provision of wider choices of good quality public transport modes in suburban areas. Existing research on transport choices to shopping areas simply looks at travel time, travel cost or distance as a measure of the 'deterrence' of getting to a retail outlet and has concentrated on the attributes of the retail outlets, thus neglecting the transport attributes. Based on a substantial study incorporating both quantitative and qualitative research, this engaging volume takes a more balanced view of both retail outlet and transport attributes. It employs a multi-method, sequential design to examine the many dimensions salient to how people evaluate transport options for shopping purposes and unravels many important issues in transport mode and retail destination choices.
