Beginning JSON BEN SMITH,2015-02-27 Beginning JSON is the definitive guide to JSON - JavaScript Object Notation - today's standard in data formatting for the web. The book starts with the basics, and walks you through all aspects of using the JSON format. Beginning JSON covers all areas of JSON from the basics of data formats to creating your own server to store and retrieve persistent data. Beginning JSON provides you with the skill set required for reading and writing properly validated JSON data. The first two brief chapters of the book contain the foundations of JavaScript as it relates to JSON, and provide the necessary understandings for later chapters. Chapters 3 through 12 reveal what data is, how to convert that data into a transmittable/storable format, how to use AJAX to send and receive JSON, and, lastly, how to reassemble that data back into a proper JavaScript object to be used by your program. The final chapters put everything you learned into practice.

The first book ever about the science of web page rankings, Google's PageRank and Beyond supplies the answers to these and other questions and more. The book serves two very different audiences: the curious science reader and the technical computational reader. The chapters build in mathematical sophistication, so that the first five are accessible to the general academic reader. The book includes an extensive background chapter designed to help readers learn more about the mathematics of search engines, and it contains several MATLAB codes and links to sample web data sets. The philosophy throughout is to encourage readers to experiment with the ideas and algorithms in the text. Any business seriously interested in improving its rankings in the major search engines can benefit from the clear examples,

sample code, and list of resources provided. Many illustrative examples and entertaining asides MATLAB code Accessible and informal style Complete and self-contained section for mathematics review

 Query Understanding for Search Engines Yi Chang,Hongbo Deng,2020-12-01 This
book presents a systematic study of practices and theories for query
understanding of search engines. These studies can be categorized into three
major classes. The first class is to figure out what the searcher wants by
extracting semantic meaning from the searcher's keywords, such as query
classification, query tagging, and query intent understanding. The second
class is to analyze search queries and then translate them into an enhanced
query that can produce better search results, such as query spelling
correction or query rewriting. The third class is to assist users in refining
or suggesting queries in order to reduce users' search effort and satisfy
their information needs, such as query auto-completion and query suggestion.
Query understanding is a fundamental part of search engines. It is
responsible to precisely infer the intent of the query formulated by the
search user, to correct spelling errors in his/her query, to reformulate the
query to capture its intent more accurately, and to guide the user in
formulating a query with precise intent. The book will be invaluable to
researchers and graduate students in computer or information science and

specializing in information retrieval or web-based systems, as well as to researchers and programmers working on the development or improvement of products related to search engines.
