Challenges and Opportunities in Agrometeorology S.D. Attri, L.S. Rathore, M.V.K. Sivakumar, S.K. Dash, 2011-10-06 The global food security and sustainable agriculture are the key challenges before the scientific community in the present era of enhanced climate variability, rapidly rising population and dwindling resources. No part of the world is immune from meteorological extremes of one sort or another posing threat to the food security. Agrometeorology has to make most efficient use of the opportunities available in achieving the objectives of enhancing productivity and maintenance of sustainability. Increased awareness and technological advancement have provided opportunities to develop efficient agrometeorological services that can help cope with risks. These include improvements in weather forecasting, better understanding of the monsoon variability and crop-weather relationships, advances in operational agrometeorology and agrometeorological information systems, adaptation strategies to climate change and improved risk evaluation and management. This book based on an International Workshop held in New Delhi, India should be of interest to all organizations and agencies interested in agrometeorological applications.

Tales from the Slot Floor, Volume 1: Casino Slot Managers in Their Own Words David G. Schwartz, 2018-06-22 Slot machines are the backbone of most casinos. They earn the most money and determine the physical layout of the casino floor. The management of slot machines, which includes overseeing employees, selecting machines, designing the playing space, resolving customer disputes, and conducting analyses to improve operations, is a challenging field whose complexity has grown as the machines themselves have become more sophisticated. To better document the current issues in slot management--and the change the field has seen over the past four decades--the University of Nevada, Las Vegas Center for Gaming Research conducted an oral history project. Those interviewed were at all stages of their careers. Drawn from these interviews, *Tales from the Slot Floor* features slot managers discussing several of the most important issues in today's casino world, including: the optimal layout of a slot floor; the qualities demonstrated by both good and bad managers; what customers want from their visits to the casino; the vendor/casino relationship; appealing to millennials; and what the future holds. In addition, those with long careers share their views on the changes they have seen, and all subjects offer their advice to those embarking on a career in slot management. For those interested in becoming slot managers, or those just curious about how casinos work, *Tales from the Slot Floor* gives you the inside story of slot operations, from those who do it.

No More Stinking Thinking Joann Altiero, 2006-11-15 'This workbook, developed after 23 years of work with children, is designed to help children change their 'stinking thinking.' 'Stinking Thinking' are ways children think that cause them to be anxious, depressed, angry, guilty, frustrated, embarrassed, insecure, or jealous. The exercises help children ages 6 to 12 years develop cognitive skills, positive thought patterns, and resilience to cope with daily hardships. The wizard theme is attractive to children and encourages them to interact with parents or therapists as they practice the concepts. Therapists and parents will find this workbook user-friendly, attractive, and fun. It is a valuable adjunct to cognitive behavioral approaches. Children are fascinated with wizards and enjoy the exercises.' - Virginia Child Protection Newsletter 'This ingenious workbook, designed for use by psychologists, teachers or parents, is highly visual and interactive and could beneficially be used with individuals and groups of children. Based on the CBT approach, it encourages children to explore their negative thinking patterns which in turn enhances their ability to cope with daily challenges. The author has cleverly used the world of magic as a backdrop to each session, and children are enticed to become super thinking wizards as they learn to outsmart negative thinking.' - The Psychologist 'Joann Altiero's *No More Stinking Thinking* is a workbook for parents, teachers and therapists to teach children how to develop the cognitive skills and resilience that will help them to cope with daily adversity, including criticism, disappointment and bullying. Each lesson explains a different type of stinking thinking - from ignoring the big picture or jumping to conclusions, to making a big (or little) deal out of something - and teaches children how to spot and combat it. The book aims to teach children about the power of positive, healthy and confident thinking and

assertive behaviours. A final exam and a graduation certificate are included. No More Stinking Thinking is accessible and fully interactive and an ideal tool for helping children develop positive thinking in an imaginative and exciting way.' - Afasic News 'This workbook aims to help those working with children teach positive thinking. Simple exercises encourage children to think about any negative views they may have about themselves and address them. Each chapter looks at a particular problem, for example jumping to conclusions. There are fun activities as well as exercises to summarise what has been learnt and children can work towards becoming a Super Wizard Thinker.' - ChildrenNow 'This book is written to help children combat negative thinking. The children work through the book with you and become a wizard of positive thinking! The idea of the book is very good and is written in a very light hearted manner. I would recommend this book to anyone who feels their child needs some help feeling good about themselves.' - www.ncma.org.uk 'This book is a workbook for parents/carers and children to encourage positive thinking. It is written in a friendly style, which makes it easy for children to follow. I particularly liked the lay out, it is in 6 chapters for steps to positive thinking and the pages are clearly laid out with lots of pictures and activities and spaces to draw your own pictures. The pictures complement the text well and make the chapters more fun. The activities are easy for the children to follow as well as making them think about what they have just read. I shall be using it in my setting and would recommend it to other childminders.' - National Child-Minding Association 'I think this workbook would be a useful resource for professionals, in particular teachers, who could use the exercises as discussions points when working with a group of children.' - Adoption-net.co.uk How can children learn to combat negative thinking in a fun and constructive way? By applying to be a wizard of positive thinking, of course! Who Gets In and Why Jeffrey Selingo, 2020-09-15 From award-winning higher education journalist and New York Times bestselling author Jeffrey Selingo comes a revealing look from inside the admissions office—one that identifies surprising strategies that will aid in the college search. Getting into a top-ranked college has never seemed more impossible, with acceptance rates at some elite universities dipping into the single digits. In *Who Gets In and Why*, journalist and higher education expert Jeffrey Selingo dispels entrenched notions of how to compete and win at the admissions game, and reveals that teenagers and parents have much to gain by broadening their notion of what qualifies as a “good college.” Hint: it’s not all about the sticker on the car window. Selingo, who was embedded in three different admissions offices—a selective private university, a leading liberal arts college, and a flagship public campus—closely observed gatekeepers as they made their often agonizing and sometimes life-changing decisions. He also followed select students and their parents, and he traveled around the country meeting with high school counselors, marketers, behind-the-scenes consultants, and college rankers. While many have long believed that admissions is merit-based, rewarding the best students, *Who Gets In and Why* presents a more complicated truth, showing that “who gets in” is frequently more about the college’s agenda than the applicant. In a world where thousands of equally qualified students vie for a fixed number of spots at elite institutions, admissions officers often make split-second decisions based on a variety of factors—like diversity, money, and, ultimately, whether a student will enroll if accepted. One of the most insightful books ever about “getting in” and what higher education has become, *Who Gets In and Why* not only provides an unusually intimate look at how admissions decisions get made, but

guides prospective students on how to honestly assess their strengths and match with the schools that will best serve their interests.

Super Pumped: The Battle for Uber Mike Isaac, 2019-09-03 Now a SHOWTIME® original series starring Emmy winners Joseph Gordon-Levitt and Kyle Chandler and Academy Award nominee Uma Thurman. Now streaming - Only on SHOWTIME. Named one of the best books of the year by NPR, Fortune, Bloomberg, Sunday Times A New York Times Book Review Editor's Choice "If you want to understand modern-day Silicon Valley, you need to read this book." —John Carreyrou, New

York Times best-selling author of *Bad Blood* Hailed as the definitive book on Uber and Silicon Valley, *Super Pumped* is an epic story of ambition and deception, obscene wealth, and bad behavior that explores how blistering technological and financial innovation culminated in one of the most catastrophic twelve-month periods in American corporate history. Backed by billions in venture capital dollars and led by a brash and ambitious founder, Uber promised to revolutionize the way we move people and goods through the world. What followed would become a corporate cautionary tale about the perils of startup culture and a vivid example of how blind worship of startup founders can go wildly wrong.

Next Generation Earth System Prediction National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Ocean Studies Board, Board on Atmospheric Sciences and Climate, Committee on Developing a U.S. Research Agenda to Advance Subseasonal to Seasonal Forecasting, 2016-08-22 As the nation's economic activities, security concerns, and stewardship of natural resources become increasingly complex and globally interrelated, they become ever more sensitive to adverse impacts from weather, climate, and other natural phenomena. For several decades, forecasts with lead times of a few days for weather and other environmental phenomena have yielded valuable information to improve decision-making across all sectors of society. Developing the capability to forecast environmental conditions and disruptive events several weeks and months in advance could dramatically increase the value and benefit of environmental predictions, saving lives, protecting property, increasing economic vitality, protecting the environment, and informing policy choices. Over the past decade, the ability to forecast weather and climate conditions on subseasonal to seasonal (S2S) timescales, i.e., two to fifty-two weeks in advance, has improved substantially. Although significant progress has been made, much work remains to make S2S predictions skillful enough, as well as optimally tailored and communicated, to enable widespread use. *Next Generation Earth System Predictions* presents a ten-year U.S. research agenda that increases the nation's S2S research and modeling capability, advances S2S forecasting, and aids in decision making at medium and extended lead times.

Climate Intervention National Research Council, Division on Earth and Life Studies, Ocean Studies Board, Board on Atmospheric Sciences and Climate, Committee on Geoengineering Climate: Technical Evaluation and Discussion of Impacts, 2015-06-23 The growing problem of changing environmental conditions caused by climate destabilization is well recognized as one of the defining issues of our time. The root problem is greenhouse gas emissions, and the fundamental solution is curbing those emissions. Climate geoengineering has often been considered to be a last-ditch response to climate change, to be used only if climate change damage should produce extreme hardship. Although the likelihood of eventually needing to resort to these efforts grows with every year of inaction on emissions control, there is a lack of information on these ways of potentially intervening in the climate system. As one of a two-book report, this volume of *Climate Intervention* discusses albedo modification - changing the fraction of incoming solar radiation that reaches the surface. This approach would deliberately modify the energy budget of Earth to produce a cooling designed to compensate for some of the effects of warming associated with greenhouse gas increases. The prospect of large-scale albedo modification raises political and governance issues at national and global levels, as well as ethical concerns. *Climate Intervention: Reflecting Sunlight to Cool Earth* discusses some of the social, political, and legal issues surrounding these proposed techniques. It is far easier to modify Earth's albedo than to determine whether it should be done or what the consequences might be of such an action. One serious concern is that such an action could be unilaterally undertaken by a small nation or smaller entity for its own benefit without international sanction and regardless of international consequences. Transparency in discussing this subject is critical. In the spirit of that transparency, *Climate Intervention: Reflecting Sunlight to Cool Earth* was based on peer-reviewed literature and the judgments of the authoring committee; no new

research was done as part of this study and all data and information used are from entirely open sources. By helping to bring light to this topic area, this book will help leaders to be far more knowledgeable about the consequences of albedo modification approaches before they face a decision whether or not to use them.
