**Inside Case-Based Explanation** Roger C. Schank,Alex Kass,Christopher K. Riesbeck,2014-02-24

This book is the third volume in a series that provides a hands-on perspective on the evolving theories associated with Roger Schank and his students. The primary focus of this volume is on constructing explanations. All of the chapters relate to the problem of building computer programs that can develop hypotheses about what might have caused an observed event. Because most researchers in natural language processing don't really want to work on inference, memory, and learning issues, most of their sample text fragments are chosen carefully to de-emphasize the need for non text-related reasoning. The ability to come up with hypotheses about what is really going on in a story is a hallmark of human intelligence. The biggest difference between truly intelligent readers and less intelligent ones is the extent to which the reader can go beyond merely understanding the explicit statements being communicated. Achieving a creative level of understanding means developing hypotheses about questions for which there may be no conclusively correct answer at all. The focus of the lab, during the period documented in this book, was to work on getting a computer program to do that. The volume adopts a case-based approach to the construction of explanations which suggests that the main steps in the process of explaining a given anomaly are as follows: \* Retrieve an explanation that might be relevant to the anomaly. \* Evaluate whether the retrieved explanation makes sense when applied to the current anomaly. \* Adapt the explanation to produce a new variant that fits better if the retrieved explanation doesn't fit the anomaly perfectly.

**Understanding Language Understanding** Ashwin Ram,Kenneth Moorman,1999 This book highlights cutting-edge research relevant to the building of a computational model of reading comprehension, as in the processing and understanding of a natural language text or story. The book takes an interdisciplinary approach to the study of reading, with contributions from computer science, psychology, and philosophy. Contributors cover the theoretical and psychological foundations of the research in discussions of what it means to understand a text, how one builds a computational model, and related issues in knowledge representation and reasoning. The book also addresses some of the broader issues that a natural language system must deal with, such as reading in context, linguistic novelty, and information extraction.

Wings with Nozzle-shaped Slots Richard Katzmayer,1929 Even before the publication of the results of the Gottingen experiments on the removal of the boundary layer by suction, experiments with nozzle-slotted wings were begun. A report of those experiments will be given here. Taken collectively, the experiments show that, as regards increasing the lift values, the effect of the air flowing from the nozzle-shaped slots is similar to the effect produced in the case of ordinary slotted wings. The high lift values are attained, however, at the smaller angles of attack employed in ordinary flight.

**When We Make It** Elisabet Velasquez,2022-08-30 The energy. The clarity. The beauty. Elisabet Velasquez brings it all. . . . Her voice is FIRE!—NYT bestselling and award-winning author Jacqueline Woodson An unforgettable, torrential, and hopeful debut young adult novel-in-verse that redefines what it means to make it,” for readers of Nicholasa Mohr and Elizabeth Acevedo. Sarai is a first-generation Puerto Rican question asker who can see with clarity the truth, pain, and beauty of the world both inside and outside her Bushwick apartment. Together with her older sister, Estrella, she navigates the strain of family traumas and the systemic pressures of toxic masculinity and housing insecurity in a rapidly gentrifying Brooklyn. Sarai questions the society around her, her Boricua identity, and the life she lives with determination and an open heart, learning to celebrate herself in a way that she has long been denied. When We Make It is a love letter to anyone who was taught to believe that they would not make it. To those who feel their emotions before they can name them. To those who still may not have all the language but they have their story. Velasquez’ debut novel is sure to leave an indelible mark on all who read it.

**The KBMT Project** Kenneth Goodman,Sergei Nirenburg,1991-09-25 Machine translation of natural languages is one of the most complex and comprehensive applications of computational

linguistics and artificial intelligence. This is especially true of knowledge-based machine translation (KBMT) systems, which require many knowledge resources and processing modules to carry out the necessary levels of analysis, representation and generation of meaning and form. The number of real-world problems, tasks, and solutions involved in developing any realistic-size knowledge-based machine translation system is enormous. It is thus difficult for researchers in the field to learn what a system really does. This book fills that need with a detailed case study of a KBMT system implemented at the Center for Machine Translation at Carnegie Mellon University. The research consists in part of the creation of a system for translation between English and Japanese. The corpora used in the project were manuals for installing and maintaining IBM personal computers (sponsorship by IBM, through its Tokyo Research Laboratory) Individual chapters describe the interlingua texts used in knowledge-based machine translation, the grammar formalism embodied in the system, the grammars and lexicons and their roles in the translation process, the process of source language analysis, an augmentation module that interactively and automatically resolves ambiguities remaining after source language analysis, and the generator, which produces target language sentences. Detailed appendices illustrate the process from analysis through generation. This book is intended for developers, researchers and advanced students in natural language processing and computational linguistics, including all those who have an interest in machine translation and machine-aided translation.

My World Traveling System: The Harbinger of Death Vampire Overlord System in the Apocalypse Epic of Ice Dragon: Reborn as an Ice Dragon with a System Epic of Summoner: Supreme Summoner System in the Apocalypse Due to the mercilessness of a wicked God, the Demon Queen's Soul is sliced in half, reincarnating twice in her third life! Unfortunately for her, one of her halves reincarnated as a Living Armor inside the depths of a labyrinth! Reincarnated not as a Living Being, but as a Living Armor, an Undead Ghost inhabiting a set of rusty armor, she will have to survive within the depths of the labyrinth as a Level 1 Monster! However, as the former Demon Queen, she will destroy each challenge that dares come her way by relearning all the abilities, skills, and spells that she once held as the Sovereign of all Demons while merging them with the unique powers of an Undead! As she rediscovers her previous life powers and knowledge, she begins to build a Demon Kingdom from zero, gathering strong allies and going against the Nations that had deemed of Demons, Beastmen, and Monsters as unholy existences! ...However, a dark shadow looms on the horizon, creeping slowly towards her future as she unravels the mysteries of the world and the gods that govern it. And amidst the chaos of her third life, where could her other half had reincarnated? Ruthless against her enemies, and compassionate towards her people, she shall reform the Heavenly Laws set by the Gods themselves! This is the story of the weakest Demon Queen, who has sworn to never commit the same mistakes of her previous lives, and now, she will become the strongest! **Water Treatment Unit Processes** David W. Hendricks,2018-10-03 The unit process approach, common in the field of chemical engineering, was introduced about 1962 to the field of environmental engineering. An understanding of unit processes is the foundation for continued learning and for designing treatment systems. The time is ripe for a new textbook that delineates the role of unit process principles in environmental engineering. Suitable for a two-semester course, *Water Treatment Unit Processes: Physical and Chemical* provides the grounding in the underlying principles of each unit process that students need in order to link theory to practice. Bridging the gap between scientific

principles and engineering practice, the book covers approaches that are common to all unit processes as well as principles that characterize each unit process. Integrating theory into algorithms for practice, Professor Hendricks emphasizes the fundamentals, using simple explanations and avoiding models that are too complex mathematically, allowing students to assimilate principles without getting sidelined by excess calculations. Applications of unit processes principles are illustrated by example problems in each chapter. Student problems are provided at the end of each chapter; the solutions manual can be downloaded from the CRC Press Web site. Excel spreadsheets are integrated into the text as tables designated by a CD prefix. Certain spreadsheets illustrate the idea of scenarios that emphasize the idea that design solutions depend upon assumptions and the interactions between design variables. The spreadsheets can be downloaded from the CRC web site. The book has been designed so that each unit process topic is self-contained, with sidebars and examples throughout the text. Each chapter has subheadings, so that students can scan the pages and identify important topics with little effort. Problems, references, and a glossary are found at the end of each chapter. Most chapters contain downloadable Excel spreadsheets integrated into the text and appendices with additional information. Appendices at the end of the book provide useful reference material on various topics that support the text. This design allows students at different levels to easily navigate through the book and professors to assign pertinent sections in the order they prefer. The book gives your students an understanding of the broader aspects of one of the core areas of the environmental engineering curriculum and knowledge important for the design of treatment systems.

**Fundamentals of Water Treatment Unit Processes** David Hendricks, 2016-04-19 Carefully designed to balance coverage of theoretical and practical principles, *Fundamentals of Water Treatment Unit Processes* delineates the principles that support practice, using the unit processes approach as the organizing concept. The author covers principles common to any kind of water treatment, for example, drinking water, municipal wastew

**Handwoven Home** Liz Gipson, 2017-06-08 There's No Place Like a Handwoven Home! Hand towels, table runners, placemats, throws--weaving is perfectly suited to creating and customizing just about any textile for your home. In *Handwoven Home*, weaving expert Liz Gipson explains the tools and techniques you'll need to weave personalized home textiles on a rigid-heddle loom--the most popular loom on the market today. From choosing the right yarn for your project to achieving your desired cloth type and drape, this book covers all the basics. And the 20+ projects are perfectly suited to the rigid-heddle loom, each starting with a simple square or rectangle and involving little sewing, shaping or loom waste. You'll even learn how to make multiple towels at the same time, create a sturdy rug of wide fabric, and finish your projects with a polished, professional look. Whether you're making textiles for yourself or as a gift, inside you'll find everything you need to create a woven personal touch for any room.

Goal-driven Learning Ashwin Ram, David B. Leake, 1995 Brings together a diversity of research on goal-driven learning to establish a broad, interdisciplinary framework that describes the goal-driven learning process. In cognitive science, artificial intelligence, psychology, and education, a growing body of research supports the view that the learning process is strongly influenced by the learner's goals. The fundamental tenet of goal-driven learning is that learning is largely an active and strategic process in which the learner, human or machine, attempts to identify and satisfy its information needs in the context of its tasks and goals, its prior knowledge, its capabilities, and environmental opportunities for learning. This book brings together a diversity of research on goal-driven learning to

establish a broad, interdisciplinary framework that describes the goal-driven learning process. It collects and solidifies existing results on this important issue in machine and human learning and presents a theoretical framework for future investigations. The book opens with an overview of goal-driven learning research and computational and cognitive models of the goal-driven learning process. This introduction is followed by a collection of fourteen recent research articles addressing fundamental issues of the field, including psychological and functional arguments for modeling learning as a deliberative, planful process; experimental evaluation of the benefits of utility-based analysis to guide decisions about what to learn; case studies of computational models in which learning is driven by reasoning about learning goals; psychological evidence for human goal-driven learning; and the ramifications of goal-driven learning in educational contexts. The second part of the book presents six position papers reflecting ongoing research and current issues in goal-driven learning. Issues discussed include methods for pursuing psychological studies of goal-driven learning, frameworks for the design of active and multistrategy learning systems, and methods for selecting and balancing the goals that drive learning.
