Smart Business Metrics Bob Phelps,2004 This work aims to give managers the tools to put the right measures in place. It shows how quantitative measures can be applied to behaviour as well as to financial and operational decisions and provides the tools that enable managers to decide strategic actions based on factual analysis. It also shows how smart metrics can produce joined-up management: all units working together to create value for the firm.

Smart City Networks Stamatina Th. Rassia,Panos M. Pardalos,2017-10-04 This book both analyzes and synthesizes new cutting-edge theories and methods for future design implementations in smart cities through interdisciplinary synergizing of architecture, technology, and the Internet of Things (IoT). Implementation of IoT enables the collection and data exchange of objects embedded with electronics, software, sensors, and network connectivity. Recently IoT practices have moved into uniquely identifiable objects that are able to transfer data directly into networks. This book features new technologically advanced ideas, highlighting properties of smart future city networks. Chapter contributors include theorists, computer scientists, mathematicians, and interdisciplinary planners, who currently work on identifying theories, essential elements, and practices where the IoT can impact the formation of smart cities and sustainability via optimization, network analyses, data mining, mathematical modeling and engineering. Moreover, this book includes research-based theories and real world practices aimed toward graduate researchers, experts, practitioners and the general public interested in architecture, engineering, mathematical modeling, industrial design, computer science technologies, and related fields.

Click Here to Kill Everybody: Security and Survival in a Hyper-connected World Bruce

Schneier,2018-09-04 A world of smart devices means the Internet can kill people. We need to act. Now. Everything is a computer. Ovens are computers that make things hot; refrigerators are computers that keep things cold. These computers—from home thermostats to chemical plants—are all online. The Internet, once a virtual abstraction, can now sense and touch the physical world. As we open our lives to this future, often called the Internet of Things, we are beginning to see its enormous potential in ideas like driverless cars, smart cities, and personal agents equipped with their own behavioral algorithms. But every knife cuts two ways. All computers can be hacked. And Internet-connected computers are the most vulnerable. Forget data theft: cutting-edge digital attackers can now crash your car, your pacemaker, and the nation's power grid. In Click Here to Kill Everybody, renowned expert and best-selling author Bruce Schneier examines the hidden risks of this new reality. After exploring the full implications of a world populated by hyperconnected devices, Schneier reveals the hidden web of technical, political, and market forces that underpin the pervasive insecurities of today. He then offers common-sense choices for companies, governments, and individuals that can allow us to enjoy the benefits of this omnipotent age without falling prey to its vulnerabilities. From principles for a more resilient Internet of Things, to a recipe for sane government regulation and oversight, to a better way to understand a truly new environment, Schneier's vision is required reading for anyone invested in human flourishing.

A Smart Assessment Methodology to Measure and Analyze Google Play Store Muhammad Farhan,Khalid Hussain,Noor Zaman Jhanjhi,2020-08-30 There are millions of apps on a regular basis, where the creators are uploading. The millions of consumers uninstall such applications without testing duplicated data. Such applications impact users' personal information which damages the confidence of the users in Google Store and also causes users to lose. In addition, there is some detail on such programs, which is provided on a play page. In this analysis job, with the aid of a crawler or scraper that is used to catalog, calculate and evaluate the millions of play store applications, we have scraped a Google play store dataset. We have specific types of applications after having collected the details regarding the applications from the play shop. Such apps are charged and optional, so we have a selection of different types of home apps so gaming applications. In this work we examined the quality of the applications by addressing different testing questions dependent on a dataset 's attributes. We also tested the causal constructs from databases, correlations, correlation, repeated trends, user feedback sentiment analysis, utilizing the different machine learning approaches that can support developers and consumers alike. We evaluated consumer feedback on game apps utilizing latent sentiment research, which is a text mining

technique. We consider the determinants generating either user-positivity or hostility against game applications. We evaluated the association between the average measurement of the emotions and the average client ranking. We analyzed that in feedback sentiment analysis graph much of the application displaying the top ranking in the rating graph is not right. The fundamental explorations of this analysis are the association between free and paid application with download duration, commercials on free and paid applications with respect to a number of downloads, rating connection with quality. We also visualized the interaction between specific attributes from the play store data using multiple simulation methods that are more important to see how programs interact with each other depending on the different attributes.
