- 🔖 *Intelligent Agents for Telecommunications Applications* Sahin Albayrak,1998 Intelligent agent and distributed AI (DAI) approaches attach specific conditions to cooperative exchanges between intelligent systems, that go far beyond simple functional interoperability. Ideally, systems that pursue local or global goals, coordinate their actions, share knowledge, and resolve conflicts during their interactions within groups of similar or dissimilar agents can be viewed as cooperative coarse-grained systems. The infrastructure of telecommunications is a world in transition. There are a number of trends that contribute to this: convergence of traditional telephony and data network worlds, blurring of boundaries between public and private networks, complementary evolution of wireline, wireless, and cable network infrastructures, the emergence of integrated broadband multimedia networks and, of course, the information superhighway. Up to now, despite the effort that has gone into this area, the field of intelligent agents research has not yet led to many fielded systems. Telecommunications applications pose strong requirements to agents such as: reliability, real-time performance, openness, security management and other integrated management, and mobility. In order to fulfil their promise, intelligent agents need to be fully dependable and typically require an integrated set of capabilities. This is the challenge that exists for intelligent agents technology in this application domain.
- 🔖 *The Internet Supply Chain*D. Chorafas,2001-05-17 The rapid advancement of technology and of Internet commerce in a globalized market has brought change at an unprecedented rate. Credit institutions, manufacturing, merchandising and service companies are finding that their traditional methods and tools for accounting and logistics no longer suffice. They must develop more efficient processes, able to assure management control in real-time, promote transparency in accounts, and make immediate corrective action possible. The earlier they prepare to take advantage of the Internet supply chain, the greater the benefits will be. This book focuses on the most significant developments taking place in the market, their impact on the accounting and finance function, the new efficient logistics solutions, and how new technology effects commerce. Based on an extensive research project in the US, Britain, Germany, France, Austria, Switzerland and Sweden, The Internet Supply Chain explains what can be expected in business opportunities and in cost savings from selling and purchasing through the Internet. The author goes on to suggest how accounting and logistics will need to be restructured to cope with, and make the most of the challenges and benefits presented by the Internet supply chain.
