Street Smart Samuel I. Schwartz,2015-08-18 With wit and sharp insight, former Traffic Commissioner of New York City, Sam Schwartz a.k.a. "Gridlock Sam," one of the most respected transportation engineers in the world and consummate insider in NYC political circles, uncovers how American cities became so beholden to cars and why the current shift away from that trend will forever alter America's urban landscapes, marking nothing short of a revolution in how we get from place to place. When Sam Schwartz was growing up in Bensonhurst, Brooklyn—his block belonged to his community: the kids who played punchball and stickball & their parents, who'd regularly walk to the local businesses at which they also worked. He didn't realize it then, but Bensonhurst was already more like a museum of a long-forgotten way-of-life than a picture of America's future. Public transit traveled over and under city streets—New York's first subway line opened in 1904—but the streets themselves had been conquered by the internal combustion engine. America's dependency on the automobile began with the 1908 introduction of Henry Ford's car-for-everyone, the Model T. The "battle for right-of-way" in the 1920s saw the demise of streetcars and transformed America's streets from a multiuse resource for socializing, commerce, and public mobility into exclusive arteries for private automobiles. The subsequent destruction of urban transit systems and post WWII suburbanization of America enabled by the Interstate Highway System and the GI Bill forever changed the way Americans commuted. But today, for the first time in history, and after a hundred years of steady increase, automobile driving is in decline. Younger Americans increasingly prefer active transportation choices like walking or cycling and taking public transit, ride-shares or taxis. This isn't a consequence of higher gas prices, or even the economic downturn, but rather a collective decision to be a lot less dependent on cars—and if American cities want to keep their younger populations, they need to plan accordingly. In Street Smart, Sam Schwartz explains how. In this clear and erudite presentation of the principles of smart transportation and sustainable urban planning—from the simplest cobblestoned street to the brave new world of driverless cars and trains—Sam Schwartz combines rigorous historical scholarship with the personal and entertaining recollections of a man who has spent more than forty years working on planning intelligent transit networks in New York City. Street Smart is a book for everyone who wants to know more about the who, what, when, where, and why of human mobility.

Faster, Smarter, Greener Venkat Sumantran,Charles Fine,David Gonsalvez,2018-09-11 A call to redefine mobility so that it is connected, heterogeneous, intelligent, and personalized, as well as sustainable, adaptable, and city-friendly. The twentieth century was the century of the automobile; the twenty-first will see mobility dramatically re-envisioned. Automobiles altered cityscapes, boosted economies, and made personal mobility efficient and convenient for many. We had a century-long love affair with the car. But today, people are more attached to their smartphones than their cars.

Cars are not always the quickest mode of travel in cities; and emissions from the rapidly growing number of cars threaten the planet. This book, by three experts from industry and academia, envisions a new world of mobility that is connected, heterogeneous, intelligent, and personalized (the CHIP architecture). The authors describe the changes that are coming. City administrators are shifting from designing cities for cars to designing cities for people. Nations and cities will increasingly employ targeted user fees and offer subsidies to nudge consumers toward more sustainable modes. The sharing economy is coaxing many consumers to shift from being owners of assets to being users of services. The auto industry is responding with connected cars that double as virtual travel assistants and by introducing autonomous driving. The CHIP architecture embodies an integrated, multimode mobility system that builds on ubiquitous connectivity, electrified and autonomous vehicles, and a marketplace open to innovation and entrepreneurship. Consumers will exercise choice on the basis of user experience and efficiency, aided by “intelligent advisors,” accessible through their mobile devices. An innovative mobility architecture reconfigured for this century is a social and economic necessity; this book charts a course for achieving it.

Sustainable, Smart and Solidary Seoul Tony Robinson, Minsun Ji, 2022-09-30 This book showcases how innovative state policy in Korea transformed Seoul from one of the world’s most impoverished, polluted, and congested cities into a global leader in green urban planning, smart city innovations, and social economy initiatives that have dramatically improved the local quality of life. Today, Seoul’s urban planning innovations are increasingly touted as replicable best practices for export to cities across the globe. This book describes how innovative state policy has made Seoul a world leader in sustainable, smart, and solidary urban initiatives. Beginning in the 1960s, Seoul led the fastest urbanization and modernization project in world history, becoming a colossal 26-million-person metropolitan region and one of the largest footprints of humanity on earth, transforming the nation from one of the world’s poorest to having the 10th largest GDP in 2020. Today, Seoul has become one of the most productive and innovative urban agglomerations on earth. Seoul’s residents enjoy the world’s highest penetration of high-speed internet, a model mass transit system, and advanced smart-city technologies. The vast city has become increasingly green and sustainable, while also recycling about 90% of all waste. Seoul has become a leader in social economy innovations like

cooperative villages, mutual benefit societies, and social investment funds that advance equitable development goals amid a booming capitalist economy. To broaden our imagination of what good urbanism can achieve, this book reviews Seoul's recent innovations in smart, sustainable, and solidary urbanism, including: green urban planning, sustainable development through recycling and reuse, well-managed mass transit, smart city design, and solidarity economy initiatives.

Subway Trains Christina Leighton, 2017-08-01 A subway train is often the light at the end of the tunnel. It travels underneath a city in its own network of underground passageways. Trains, Buses, People Christof Spieler, 2018-10-23 What are the best transit cities in the US? The best Bus Rapid Transit lines? The most useless rail transit lines? The missed opportunities? In the US, the 25 largest metropolitan areas and many smaller cities have fixed guideway transit—rail or bus rapid transit. Nearly all of them are talking about expanding. Yet discussions about transit are still remarkably unsophisticated. To build good transit, the discussion needs to focus on what matters—quality of service (not the technology that delivers it), all kinds of transit riders, the role of buildings, streets and sidewalks, and, above all, getting transit in the right places. Christof Spieler has spent over a decade advocating for transit as a writer, community leader, urban planner, transit board member, and enthusiast. He strongly believes that just about anyone—regardless of training or experience—can identify what makes good transit with the right information. In the fun and accessible *Trains, Buses, People: An Opinionated Atlas of US Transit*, Spieler shows how cities can build successful transit. He profiles the 47 metropolitan areas in the US that have rail transit or BRT, using data, photos, and maps for easy comparison. The best and worst systems are ranked and Spieler offers analysis of how geography, politics, and history complicate transit planning. He shows how the unique circumstances of every city have resulted in very different transit systems. Using appealing visuals, *Trains, Buses, People* is intended for non-experts—it will help any citizen, professional, or policymaker with a vested interest evaluate a transit proposal and understand what makes transit effective. While the book is built on data, it has a strong point of view. Spieler takes an honest look at what makes good and bad transit and is not afraid to look at what went wrong. He explains broad concepts, but recognizes all of the technical, geographical, and political difficulties of building transit in the real world. In the end, *Trains, Buses, People* shows that it is possible with the right tools to build good transit.

Transit-Oriented Displacement or Community Dividends? Karen Chapple, Anastasia Loukaitou-Sideris, 2019-04-09 An examination of the neighborhood transformation, gentrification, and displacement that accompany more compact development around transit. Cities and regions throughout the world are encouraging smarter growth patterns and expanding their transit systems to accommodate this growth, reduce greenhouse gas emissions, and satisfy new demands for mobility and accessibility. Yet despite a burgeoning literature and various policy interventions in recent decades, we still understand little about what happens to neighborhoods and residents with the development of transit systems and the trend toward more compact cities. Research has failed to determine why some neighborhoods change both physically and socially while others do not, and how race and class shape change in the twenty-first-century context of growing inequality. Drawing on novel methodological approaches, this book sheds new light on the question of who benefits and who loses from more compact development around new transit stations. Building on data at multiple levels, it connects quantitative analysis on regional patterns with qualitative research through interviews, field observations, and photographic documentation in twelve different California neighborhoods. From the local to the regional to the global, Chapple and Loukaitou-Sideris examine the phenomena of neighborhood transformation, gentrification, and displacement not only through an empirical lens but also from theoretical and historical perspectives. Growing out of an in-depth

research process that involved close collaboration with dozens of community groups, the book aims to respond to the needs of both advocates and policymakers for ideas that work in the trenches.

Intelligent Transportation Systems Sundaravalli Narayanaswami, 2022-11-29 Transportation-related challenges exist all over the world, with all countries struggling to develop efficient, effective and user-friendly transportation systems. Today, policy agencies and financing institutions are keen to invest heavily for a potentially good transport systems, as good mobility is pertinent to social growth and a sustainable environment. Intelligent Transportation Systems (ITS) have become a global area of growth in recent times because of increasing demand for mobility, rampant urbanization, and depleting energy reserves. Existing conventional transport infrastructure fails to meet the ever-increasing demand; building additional transportation infrastructure is cumbersome, as it is time-consuming and capital-intensive and available land space is very limited. Therefore, there is a pressing need for innovative and locally relevant systems that can be built rapidly with less investment by leveraging advances in technology. Good ITS enable informed decision-making for all stakeholders. This book presents the ingredients of good ITS, not from a technology perspective, but from a business administration, management, and policy perspective. The emphasis is on practice-oriented, impactful and context relevant systems. Short, real-life case studies are presented for each topic, to keep the discerning transportation enthusiast engaged.
