**Pro SMS 2003** Rod Kruetzfeld,2007-02-01 Microsoft's Systems Management Server (SMS) allows network administrators to provide software updates to users quickly and cost-effectively from a single machine. The administrator can update every user in a network at once, or choose a group of individuals — even a single user. All this can be accomplished from the administrator's computer: no need to visit everyone's computer to make changes, as in days of old. The SMS 2003 Field Guide addresses real-world problems and solutions, based on the broad consulting experience of the author. He knows where network administrators are liable to make mistakes, and offers help at their level.

This book's web site will contain a collection of ready-to-use scripts with directions for implementing them in network systems.
