**How to Use Your Business Cards for Success** G. Lee Mikules,2003 Your business card is usually the first tangible thing a customer/client will take with him or her after meeting you. Does it communicate the message you want it to? G. Lee Mikules offers guidelines on how to get the most from your card- from design to distribution. Everyone is concerned about what is important to them before they are concerned about anything else. And you, as the one who hands them out, must realize that your ego will clash with that of the person who receives your card...The person you hand your card to does not care about your name or the fact that you have been in business for 25 years, or that you have every credential possible, and so forth. The only thing he is interested in is what your business, product, or service can do for him. Will it save or make him money? Will it feed his ego? You have to distill the essence of what your business is, and, most importantly, what it can do for your customer into a concise, benefit-oriented, hard-hitting sales message. Then put that message front and centre on your card!

The standardization of SMS started in February 1985 as a part of the creation of the second generation digital cellular system GSM, and the 25th anniversary of the first work on SMS provides an opportunity to review and understand how this service was developed. The book also looks to the future, as a large number of new GSM and evolved GSM phones will support SMS as a mass market high availability messaging service, a new simple Multimedia Messaging Service (MMS) suitable for use by everyone and for implementation in every new terminal is proposed. One of the only books which covers the complete SMS genesis from concept ideas to standardization of a first technical solution and its evolution to the present day. Describes the service concept including the limitation of the message length to 160 characters and explains the rationale behind the concept. Based on existing and newly retrieved documentation.
